

## 700mA High Speed LDO Regulator

## ■ GENERAL DESCRIPTION

The XC6222 series is a highly accurate, low noise, high ripple rejection, low dropout, and low power consumption high speed voltage regulator. The series consists of a voltage reference, an error amplifier, a driver transistor, a current limiter, a thermal protection circuit, and a phase compensation circuit.

The CE function enables the entire circuit to be placed in a stand-by state by inputting a low level signal to the CE pin. In this stand-by mode, the electric charge at the output capacitor ( $C_L$ ) will be discharged by the internal auto-discharge switch, and as a result the VOUT pin will quickly return to the VSS level.

Over-current protection and thermal protection circuits are integrated. The protection circuit starts to operate when either output current reaches the current limit level or junction temperature reaches the temperature limit.

## ■ APPLICATIONS

- USB / HDMI products
- Optical disk drive
- Magnetic disk drive
- Smart phones / Mobile phones
- Portable game consoles
- Modules (wireless, cameras, etc.)
- E-book Reader / Electronic dictionaries

## ■ FEATURES

<b>Maximum Output Current</b>	: 700mA
<b>Dropout Voltage</b>	: 120mV @ $I_{OUT}=300\text{mA}$ ( $V_{OUT}=3.0\text{V}$ )
<b>Operating Voltage Range</b>	: 1.7V ~ 6.0V
<b>Output Voltage</b>	: 0.8V~5.0V (0.05V increments)
<b>Accuracy</b>	: $\pm 1\%$ ( $V_{OUT} > 2.0\text{V}$ ) $\pm 0.02\text{V}$ ( $V_{OUT} \leq 2.0\text{V}$ )
<b>Low Power Consumption</b>	: 100 $\mu\text{A}$
<b>High Ripple Rejection</b>	: 65dB @ 1kHz
<b>Low ESR Capacitor</b>	: Ceramic capacitor
<b>Chip Enable (CE)</b>	: Active High, $C_L$ discharge Standby Current below 0.1 $\mu\text{A}$
<b>Operating Ambient Temperature</b>	: $-40^\circ\text{C} \sim +85^\circ\text{C}$
<b>Packages</b>	: USP-6C, SOT-25, SOT-89-5
<b>Environmentally Friendly</b>	: EU RoHS Compliant, Pb Free

## ■ TYPICAL APPLICATION CIRCUIT

SOT-25  
(TOP VIEW)USP-6C  
(TOP VIEW)

- \* $C_L$ : 2.2  $\mu\text{F}$  or higher ( $V_{OUT}=2.5 \sim 5.0\text{V}$ )  
 4.7  $\mu\text{F}$  or higher ( $V_{OUT}=2.1 \sim 2.45\text{V}$ )  
 6.8  $\mu\text{F}$  or higher ( $V_{OUT}=0.8 \sim 2.05\text{V}$ )

## ■ TYPICAL PERFORMANCE CHARACTERISTICS

- Load Transient Response

XC6222x151

$t_r = t_f = 5 \mu\text{s}$ ,  $V_{IN} = 2.5\text{V}$ ,  $T_a = 25^\circ\text{C}$   
 $V_{OUT} = 1.0 \rightarrow 300\text{mA}$ ,  $C_{IN} = 1.0 \mu\text{F}$  (ceramic),  $C_L = 6.8 \mu\text{F}$  (ceramic)

## ■ BLOCK DIAGRAMS

XC6222Aseries

XC6222Dseries

\* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

## ■ PRODUCT CLASSIFICATION

### ● Ordering Information

XC6222①②③④⑤⑥-⑦

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Type of CE	A	without CE Pull-down resistor, without $C_L$ discharge
		B	without CE Pull-down resistor, with $C_L$ discharge
		C	with CE Pull-down resistor, without $C_L$ discharge
		D (The Recommended Type)	with CE Pull-down resistor, with $C_L$ discharge
②③	Output Voltage	08~50	e.g. 2.8V → ②=2, ③=8 Output Voltage Range : 0.8~5.0 V (0.05V increments)
④	Output Voltage Accuracy	1	Output voltage {x.x0v} (the 2 <sup>nd</sup> decimal place is "0") Accuracy±1% ( $V_{OUT} > 2.0V$ ), ±0.02V( $V_{OUT} \leq 2.0V$ )
		B	Output voltage {x.x5v} (the 2 <sup>nd</sup> decimal place is "5") Accuracy±1% ( $V_{OUT} > 2.0V$ ), ±0.02V( $V_{OUT} \leq 2.0V$ )
⑤⑥-⑦ <sup>(*)</sup>	Packages (Order Unit)	ER-G	USP-6C (3,000/Reel)
		MR-G	SOT-25 (3,000/Reel)
		PR-G	SOT-89-5 (1,000/Reel)

<sup>(\*)</sup> The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

## ■ PIN CONFIGURATION

\*The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the V<sub>SS</sub> (No. 5) pin.

## ■ PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTIONS
USP-6C	SOT-25	SOT-89-5		
1	1	4	V <sub>IN</sub>	Power Input
3	5	5	V <sub>OUT</sub>	Output
2,4	4	3	NC	No connection
5	2	2	V <sub>SS</sub>	Ground
6	3	1	CE	ON/OFF Control

## ■ ABSOLUTE MAXIMUM RATINGS

PARAMETER		SYMBOL	RATINGS	UNITS
Input Voltage		V <sub>IN</sub>	-0.3~+6.5	V
Output Current		I <sub>OUT</sub>	1400 (*1)	mA
Output Voltage		V <sub>OUT</sub>	V <sub>SS</sub> -0.3~+6.5	V
CE Input Voltage		V <sub>CE</sub>	V <sub>SS</sub> -0.3~+6.5	V
Power Dissipation	USP-6C	Pd	120	mW
			1000 (PCB mounted) <sup>(*2)</sup>	
	SOT-25		250	
			600 (PCB mounted) <sup>(*2)</sup>	
	SOT-89-5		500	
1300 (PCB mounted) <sup>(*2)</sup>				
Operating Ambient Temperature		T <sub>opr</sub>	-40~+85	°C
Storage Temperature		T <sub>stg</sub>	-55~+125	°C

\*1. Please use within the range of  $P_d > \{(V_{IN}-V_{OUT}) \times I_{OUT}\}$

\*2. The power dissipation figure shown is PCB mounted. Please refer to page 23 to 25 for details.

## ■ ELECTRICAL CHARACTERISTICS (Continued)

NOTE:

- \* 1: Unless otherwise stated, input voltage is  $V_{IN}=V_{OUT(T)}+1.0V$ .
- \* 2:  $V_{OUT(E)}$  is effective output voltage (Refer to the voltage chart E-0 and E-1)  
It is defined as output voltages when an amply stabilized  $V_{OUT(T)}+1.0V$  is supplied to the  $V_{IN}$  pin while maintaining a certain  $I_{OUT}$ .
- \* 3: The relation between  $V_{OUT(E)}$  and  $V_{OUT(T)}$  is shown in the voltage chart E-0 and E-1.
- \* 4:  $V_{OUT(T)}$  is nominal output voltage
- \* 5:  $V_{dif} = \{V_{IN1}-V_{OUT1}\}$   
 $V_{OUT1}$  equals 98% of the output voltage when amply stabilized  $V_{OUT(T)}+1.0V$  are supplied to the  $V_{IN}$  pin.  
 $V_{IN1}$  is the input voltage when  $V_{OUT1}$  appears at the  $V_{OUT}$  pin while input voltage is gradually decreased.
- \* 6: Reverse current ( $I_{REV}$ ) flows from  $V_{OUT}$  to  $V_{IN}$ .
- \* 7:  $V_{OUT}$  pin sink current ( $I_{REVS}$ ) flows from  $V_{OUT}$  to  $V_{SS}$ .
- \* 8: For the XC6222A/C series only. In the XC6222B/D series, the current flows from the  $V_{OUT}$  pin to the  $V_{SS}$  pin via the internal switch when CE pin is low. Please do not connect another power supply to the  $V_{OUT}$  pin. Please also note when the XC6222A/C series connects external power supply to the  $V_{OUT}$  pin, please use it within the range from  $V_{OUT(E)}$  (actual output voltage value) or more to 6.0V or less. When the voltage less than  $V_{OUT(E)}$  is applied to the  $V_{OUT}$  pin by adding a power supply or battery, a low level signal should be input to the CE pin for chip disable in order to protect a reverse current at  $V_{IN} < V_{OUT}$ .
- \* 9: For the XC6222B/D series only. The XC6222A/C series discharges via two resistors R1 and R2 shown in the block diagram.

## OPERATIONAL EXPLANATION

The voltage divided by two resistors R1 and R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET connected to the V<sub>OUT</sub> pin, is then driven by the subsequent output signal. The output voltage at the V<sub>OUT</sub> pin is controlled and stabilized by a system of negative feedback. The current limit and short protection operate in relation to the level of output current. The thermal protection operates in relation to the level of heat generation. The reverse current protection operates when V<sub>OUT</sub> voltage is higher than V<sub>IN</sub> voltage. Further, the IC's internal circuitry can be turned off via the CE pin's signal.

### <Input and Output Capacitors>

The XC6222 needs an output capacitor C<sub>L</sub> for phase compensation. Values required for the phase compensation are shown in the chart below. If a loss of the capacitance happens, stable phase compensation may not be obtained. Please ensure to use a capacitor which does not depend on bias or temperature too much. For a stable power input, please connect an input capacitor C<sub>IN</sub> of 1.0 μF between the V<sub>IN</sub> pin and the V<sub>SS</sub> pin.

#### ● Output Capacitor (C<sub>L</sub>) Table

OUTPUT VOLTAGE (V)	OUTPUT CAPACITOR VALUE
0.8V~2.05V	C <sub>L</sub> =6.8 μF (MIN.)
2.1V~2.45V	C <sub>L</sub> =4.7 μF (MIN.)
2.5V~5.0V	C <sub>L</sub> =2.2 μF (MIN.)

### <Reverse Current Protection>

The XC6222 series includes reverse current protection to prevent the damage to any connected products such as batteries as a result of current flow from the V<sub>OUT</sub> pin to the V<sub>IN</sub> pin. When V<sub>IN</sub> is smaller than V<sub>OUT</sub>, the reverse current protection works and suppress the reverse current to 1.5 μA (MAX.). When V<sub>IN</sub> is smaller than V<sub>OUT</sub>, the V<sub>OUT</sub> pin sink current flows from the V<sub>OUT</sub> pin to the V<sub>SS</sub> pin is 95 μA (TYP.) as the IC operation current. With the XC6222A/C series, when a low level signal is inputted to the CE pin, the sink current of the V<sub>OUT</sub> pin is minimized to 2.8 μA (TYP.). However, with the XC6222B/D series, when a low level signal is inputted to the CE pin, the sink current of the V<sub>OUT</sub> pin goes through the C<sub>L</sub> auto discharge circuit to the V<sub>SS</sub> pin which may result in the IC being damaged. In this case, please do not connect a power supply to the V<sub>OUT</sub> pin.

Please also note when the XC6222A/C series connects external power supply to the V<sub>OUT</sub> pin, please use it within the range from V<sub>OUT(E)</sub> (actual output voltage value) or more to 6.0V or less. When the voltage less than V<sub>OUT(E)</sub> is applied to the V<sub>OUT</sub> pin by adding a power supply or battery, a low level signal should be input to the CE pin for chip disable in order to protect a reverse current at V<sub>IN</sub> < V<sub>OUT</sub>.

Example) The voltage less than V<sub>OUT(E)</sub> (actual output voltage value) is applied to the V<sub>OUT</sub> pin as "OR" connection.

## ■ OPERATIONAL EXPLANATION (Continued)

### <Current Limiter, Short-Circuit Protection>

The XC6222 series' fold-back circuit operates as an output current limiter and a short protection circuit for the output pin. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. When the output pin is short-circuited to the V<sub>SS</sub> pin, the current is decreased to a level of 55mA.

### <Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit level (150°C TYP.), the thermal shutdown circuit operates and the driver transistor will be turned OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of 125°C (TYP.) as the thermal shutdown release voltage.

### <C<sub>L</sub> Auto-Discharge Function>

XC6222B/D series can discharge the electric charge stored in the output capacitor (C<sub>L</sub>), when a low signal to the CE pin, which enables the whole IC circuit to be turned off, is inputted via the N-channel transistor located between the V<sub>OUT</sub> pin and the V<sub>SS</sub> pin (cf. BLOCK DIAGRAM). The C<sub>L</sub> auto-discharge resistance value is set at 530 Ω (TYP.). The discharge time of the output capacitor (C<sub>L</sub>) is set by the C<sub>L</sub> auto-discharge resistance (R) and the output capacitor (C<sub>L</sub>). By setting the time constant of the C<sub>L</sub> auto-discharge resistance value [R<sub>DCHG</sub>] and the output capacitor value (C<sub>L</sub>) as  $\tau$  ( $\tau = C \times R_{DCHG}$ ), the output voltage after discharge via the N-channel transistor is calculated by the following formula.

$$V = V_{OUT(E)} \times e^{-t/\tau}, \quad \text{or} \quad t = \tau \ln ( V / V_{OUT(E)} )$$

where

V: Output voltage after discharge

V<sub>OUT(E)</sub>: Output voltage

t: Discharge time

$\tau$ : C<sub>L</sub> auto-discharge resistance R<sub>DCHG</sub> × Output capacitor (C<sub>L</sub>) value C

### <CE Pin>

The entire XC6222 circuitry can be turned off via the CE pin signal. In shutdown mode, output at the V<sub>OUT</sub> pin will be pulled down to the V<sub>SS</sub> level via R1 & R2. However, with the XC6222B series, the C<sub>L</sub> auto-discharge resistor is connected in parallel to R1 and R2 while the power supply is applied to the V<sub>IN</sub> pin. Therefore, time until the V<sub>OUT</sub> pin reaches the V<sub>SS</sub> level is shorter. For the XC6222A/B series, the output voltage becomes unstable, when the CE pin is left open. If this CE pin voltage is set with the specified voltage range, the logic is fixed and the IC will operate normally. However, the supply current may increase as a result of shoot-through current in the IC's internal circuitry when a medium voltage is input to the CE pin. With the XC6222C/D series, when the CE pin is left open, output voltage is fixed to V<sub>SS</sub> level.

## ■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current.  
Please wire the input capacitor (C<sub>IN</sub>) and the output capacitor (C<sub>L</sub>) as close to the IC as possible.
3. Torex places an importance on improving our products and their reliability.  
We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

## TEST CIRCUITS

● Circuit ①

● Circuit ②

● USP-6C Power Dissipation

Power dissipation data for the USP-6C is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
Copper (Cu) traces occupy 50% of the board area  
In top and back faces  
Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient Temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation $P_d$ (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )
25	1000	100.00
85	400

### SOT-25 Power Dissipation

Power dissipation data for the SOT-25 is shown in this page.  
 The value of power dissipation varies with the mount board conditions.  
 Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
 Copper (Cu) traces occupy 50% of the board area  
 In top and back faces  
 Package heat-sink is tied to the copper traces  
 (Board of SOT-26 is used.)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient Temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation Pd (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )
25	600	166.67
85	240

### ● SOT-89-5 Power Dissipation

Power dissipation data for the SOT-89-5 is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
Copper (Cu) traces occupy 50% of the board area  
In top and back faces  
Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 5 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient Temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation Pd (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )
25	1300	76.92
85	520	

## MARKING RULE

① represents product series

MARK	PRODUCT SERIES
N	XC6222*****-G

② represents regulator type, voltage range, and accuracy

MARK	REGULATOR TYPE	OUTPUT VOLTAGE RANGE	ACCURACY	PRODUCT SERIES
C	A	0.8~2.9	1	XC6222A081**-G~XC6222A291**-G
D	A	0.85~2.95	B	XC6222A08B**-G~XC6222A29B**-G
E	A	3.0~5.0	1	XC6222A301**-G~XC6222A501**-G
F	A	3.05~4.95	B	XC6222A30B**-G~XC6222A49B**-G
H	B	0.8~2.9	1	XC6222B081**-G~XC6222B291**-G
K	B	0.85~2.95	B	XC6222B08B**-G~XC6222B29B**-G
L	B	3.0~5.0	1	XC6222B301**-G~XC6222B501**-G
M	B	3.05~4.95	B	XC6222B30B**-G~XC6222B49B**-G
N	C	0.8~2.9	1	XC6222C081**-G~XC6222C291**-G
P	C	0.85~2.95	B	XC6222C08B**-G~XC6222C29B**-G
R	C	3.0~5.0	1	XC6222C301**-G~XC6222C501**-G
S	C	3.05~4.95	B	XC6222C30B**-G~XC6222C49B**-G
T	D	0.8~2.9	1	XC6222D081**-G~XC6222D291**-G
U	D	0.85~2.95	B	XC6222D08B**-G~XC6222D29B**-G
