

### Features

- Input Voltage Range: 2.5 V to 5.5 V
- Output Voltage Options:
  - ◆ Fixed Voltage: 1.2 V, 1.8 V, 2.5 V, 2.8 V, 3 V, 3.3 V
  - ◆ Adjustable Voltage: 0.8 V to 5 V
- $\pm 2\%$  Output Accuracy Through Operating Conditions
- Maximum Output Current: 300 mA
- Low Dropout Voltage: 200 mV at 300 mA
- Low Quiescent Current and Shutdown Current
- Foldback Current Limit and Thermal Protection
- Stable with 2.2  $\mu\text{F}$  Ceramic Capacitor
- Soft-start Limits Input Current Surge During Enable
- Thermal Shutdown Protection
- Junction Temperature Range:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- SOT23-5 Package

### Applications

- Handheld Devices with Battery Power Supply
- Video Surveillance
- Wireless and IoT modules

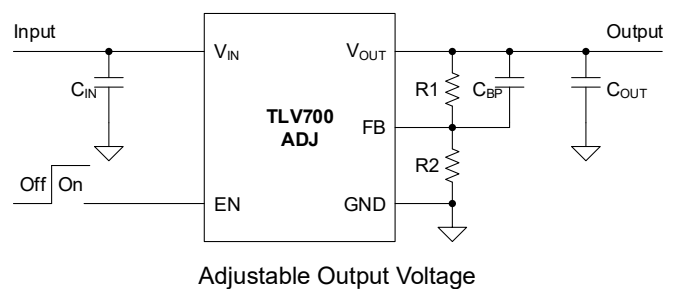

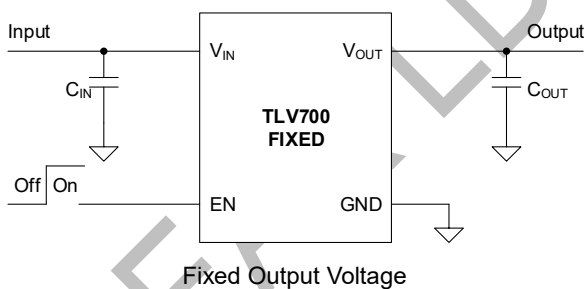

### Description

The TLV700 series products are high performance and low dropout linear regulators. The TLV700 series products support maximum 300 mA output current with low quiescent current and high PSRR. The TLV700 series products is stable with ceramic output capacitor from 2.2  $\mu\text{F}$  to 10  $\mu\text{F}$ .

The TLV700 series products have a high PSRR with 60 dB at 1 KHz. This feature makes TLV700 series products very suitable for power-sensitive applications with high noise from previous stage power supply. As low as 50  $\mu\text{A}$  quiescent current and shutdown current makes the TLV700 series products ideal choices for portable devices with battery power supply. Current-limit foldback and thermal overload protection circuits improves the reliability under heavy load conditions.

The TLV700 series products provide several output voltage version options including fixed version and adjustable version with  $\pm 2\%$  output voltage accuracy over operating conditions. The TLV700 series products are guaranteed over operating temperature range from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

### Typical Application Schematic

3PEAK LDO DATASHEET

### Pin Configuration and Functions

#### TLV700 Series

5-Pin SOT23 Package

Top View

#### Pin Functions

Name	Pin Number	I/O	Description
IN	1	I	Input voltage pin. Bypass IN to GND with a 1 $\mu$ F or greater capacitor.
OUT	5	O	Regulated output voltage pin. Bypass OUT to GND with a 2.2 $\mu$ F or greater capacitor.
EN	3	I	Regulator enable pin. Drive EN high to turn on the regulator; drive EN low to turn off the regulator. For automatic startup, connect EN to IN directly.
GND	2	-	Ground reference pin. Connect GND pin to PCB ground plane directly.
NC	4	-	No connection.
FB	4	I	Output feedback pin (Adjustable version only). Connect to a resistor divider to adjust the output voltage.

Note: Thermal pad must be connected to PCB ground plane to maximum the thermal performance.

## Specifications

### Absolute Maximum Ratings

Parameters		Min	Max	Unit
$V_{IN}, V_{EN}$	Input Voltage	-0.3	6	V
$V_{OUT}$	Output Voltage	-0.3	6	V
$V_{FB}$	Feedback Voltage (Adjustable version only)	-0.3	6	V
$T_J$	Junction Temperature Range	-40	150	°C
$T_{STG}$	Storage Temperature Range	-65	150	°C
$T_L$	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) All voltage values are with respect to GND.

### ESD, Electrostatic Discharge Protection

Symbol	Parameter	Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001	±8	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002	±2	kV

### Recommended Operating Conditions

Parameters		Min	Max	Unit
$V_{IN}$	Input Voltage	2.5	5.5	V
$V_{EN}$	Enable Voltage	0	$V_{IN}$	V
$V_{OUT}$	Output Voltage	0	5	V
$V_{FB}$	Feedback Voltage (Adjustable version only)	0	$V_{OUT}$	V
$I_{OUT}$	Output Current	0	300	mA
$T_J$	Junction Temperature Range	-40	125	°C

### Thermal Information

Package Type	$\theta_{JA}$	$\theta_{JC}$	Unit
SOT23-5	280	62	°C/W

## Electrical Characteristics

All test condition:  $V_{IN} = V_{OUT(NOM)} + 0.5V$  or  $2.5V$ , whichever is greater;  $C_{OUT} = 2.2 \mu F$ ,  $T_A = +25^\circ C$ , unless otherwise noted.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
<b>Supply Input Voltage and Current</b>						
$V_{IN}$	Input voltage range		2.5		5.5	V
$I_{GND}$	Ground pin current	$I_{OUT} = 0 \text{ mA}$		50		$\mu A$
$I_{SHDN}$	Shutdown current	EN = GND		1		$\mu A$
UVLO	$V_{IN}$ under-voltage lock-out	$V_{IN}$ rising		2		V
		Hysteresis		0.2		V
<b>Enable Input Voltage and Current</b>						
$V_{IH(EN)}$	EN logic-input high level (enable)		1.2		$V_{IN}$	V
$V_{IL(EN)}$	EN logic-input low level (disable)		0		0.4	V
$I_{EN}$	EN pin leakage current	EN = 5V		1		$\mu A$
<b>Regulated Output Voltage and Current</b>						
$V_{OUT}$	Output voltage accuracy		-2%		2%	
$V_{FB}$	Feedback pin voltage	ADJ version only		0.8		V
$\Delta V_{OUT}$	Line regulation	$V_{IN} = V_{OUT(NOM)} + 0.5V$ or $2.5V$ to $5.5V$ , $I_{OUT} = 1 \text{ mA}$		4	10	mV
	Load regulation	$I_{OUT} = 1 \text{ mA}$ to $300 \text{ mA}$		25		mV
$V_{DO}^{(1)}$	Dropout voltage	$V_{IN} = 0.98 \times V_{OUT(NOM)}$ , $I_{OUT} = 100 \text{ mA}$		80		mV
		$V_{IN} = 0.98 \times V_{OUT(NOM)}$ , $I_{OUT} = 300 \text{ mA}$		240	300	mV
$I_{OUT}$	Output current	$V_{OUT}$ in regulation	0		300	mA
$I_{CL}$	Output current limit	$V_{OUT} = 0.9 \times V_{OUT(NOM)}$	350		1200	mA
PSRR	Power supply rejection ratio	$I_{OUT} = 100 \text{ mA}$ , $f = 1 \text{ kHz}$		60		dB
		$I_{OUT} = 100 \text{ mA}$ , $f = 1 \text{ MHz}$		40		dB
$V_N$	Output noise voltage	$I_{OUT} = 100 \text{ mA}$ , BW = 100Hz to 80 kHz		150		$\mu V_{RMS}$
$t_{STR}^{(2)}$	Start-up time	$I_{OUT} = 500 \text{ mA}$ , $C_{OUT} = 2.2 \mu F$		150		$\mu s$
		$I_{OUT} = 500 \text{ mA}$ , $C_{OUT} = 2.2 \mu F$ , $C_{BP} = 100 \text{ nF}$		15		ms
<b>Temperature Range</b>						
$T_{SD}$	Thermal shutdown temperature			170		$^\circ C$
	Thermal shutdown hysteresis			30		$^\circ C$

(1) Dropout voltage is the minimum input to output voltage differential needed to maintain regulation at a specified output current. In dropout, the output voltage will be equal to:  $V_{IN} - V_{DROPOUT}$ .

(2) Start-up time from EN assertion to  $0.98 \times V_{OUT(NOM)}$ .

### Typical Performance Characteristics

All test condition:  $V_{IN} = V_{OUT(NOM)} + 0.5V$  or  $2.5V$ , whichever is greater;  $C_{OUT} = 2.2 \mu F$ ,  $T_A = +25^\circ C$ , unless otherwise noted.

## Detailed Description

### Overview

The TLV700 devices products are 300 mA high PSRR, low-dropout linear regulators with very low quiescent current. These voltage regulators operate from 2.5 V to 5.5 V and consume 50  $\mu$ A of quiescent current at no load. The TLV700 series are available in fixed voltage versions of 1.2 V, 1.8 V, 2.5 V, 2.8 V, 3 V and 3.3 V, and also adjustable voltage version of 0.8 V to 5 V with  $\pm 2\%$  output voltage accuracy over operating conditions.

### Functional Block Diagram

TLV700 Series Fixed Output Version

TLV700 Series Adjustable Output Version

## Feature Description

### Enable

The enable pin (EN) is active high. Connect this pin to the GPIO of an external processor or digital logic control circuit to enable and disable the device. Or connect this pin to the IN pin for self-bias applications.

### Under-voltage Lockout (UVLO)

The TLV700 series use an under-voltage lockout circuit (UVLO = 2 V) to keep the output shut off until the internal circuitry operates properly.

### Regulated Output Voltage

The TLV700 series are available in fixed voltage versions of 1.2 V, 1.8 V, 2.5 V, 2.8 V, 3 V and 3.3 V. When the input voltage is higher than  $V_{OUT(NOM)} + V_{DO}$  or 2.5V, output pin is the regulated output based on the selected voltage version. When the input voltage falls below  $V_{OUT(NOM)} + V_{DO}$  or 2.5V, output pin tracks the input voltage minus the dropout voltage based on the load current. When the input voltage drops below UVLO threshold, the output keeps shut off.

### Adjustable Output Voltage

The TLV700 series are also available in adjustable voltage versions of 0.8 V to 5 V by selecting suitable external resistor dividers. Use [Equation 1](#) to calculate the output voltage ( $V_{FB} = 0.8$  V). Suggest select resistor value of (R1 + R2) between 10 k $\Omega$  and 100 k $\Omega$ .

$$V_{OUT} = V_{FB} \times \left( 1 + \frac{R1}{R2} \right) \quad (1)$$

### Current Limit

The TLV700 series integrate an internal foldback current limit that helps to protect the regulator during fault conditions. Output voltage is not regulated when the device is in current limit mode, and  $V_{OUT}$  equals to  $I_{CL} \times R_{LOAD}$ .

### Thermal Shutdown

During normal operation, LDO junction temperature should not exceed 125°C. When the junction temperature exceeds the thermal shutdown threshold, the LDO shut down the output immediately. Until when the junction temperature falls below the thermal shutdown threshold minus thermal shutdown hysteresis, the output turns on again.

### Application and Implementation

#### NOTE

Information in the following applications sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### Application Information

The TLV700 devices are a series of 300 mA high PSRR, low-dropout linear regulator with low quiescent current. The following application schematic shows a typical usage of the TLV700 series.

### Typical Application

Figure 7 and Figure 8 show the typical application schematic of the TLV700 series.

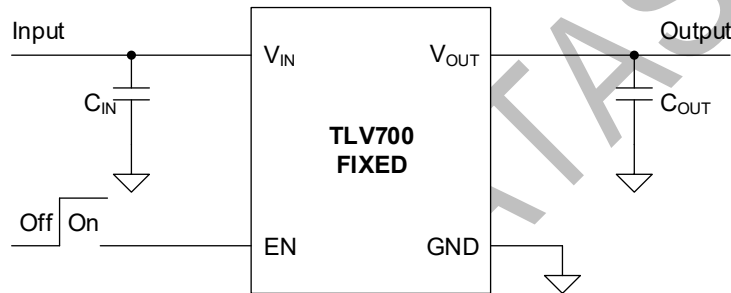

Figure 7 TLV700 Fixed Output Voltage

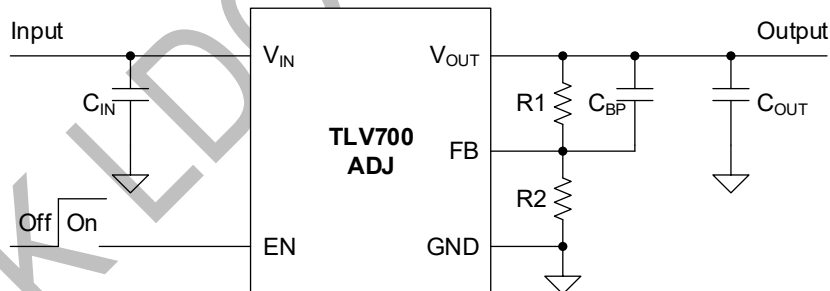

Figure 8 TLV700 Adjustable Output Voltage

### Input Capacitor and Output Capacitor

3PEAK recommends adding a 1  $\mu\text{F}$  or greater capacitor with a 0.1  $\mu\text{F}$  bypass capacitor in parallel at IN pin to keep the input voltage stable. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TLV700 series requires an output capacitor with a minimum effective capacitance value of 2.2  $\mu\text{F}$ . 3PEAK recommends selecting a X5R- or X7R-type ceramic capacitor with low ESR over temperature.

Both input capacitors and output capacitors must be placed as close to the device pins as possible.

## Power Dissipation

During normal operation, LDO junction temperature should not exceed 125°C. Using below equations to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 2](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (2)$$

The junction temperature can be estimated using [Equation 3](#).  $\theta_{JA}$  is the junction-to-ambient thermal resistance (See Section [Thermal Information](#)).

$$T_J = T_A + P_D \times \theta_{JA} \quad (3)$$

## Layout Requirements

- Both input capacitors and output capacitors must be placed as close to the device pins as possible.
- It is recommended to bypass the input pin to ground with a 0.1  $\mu$ F bypass capacitor. The loop area formed by the bypass capacitor connection, IN pin and the GND pin of the system must be as small as possible.
- It is recommended to use wide trace lengths or thick copper weight to minimize I×R drop and heat dissipation.
