Real-World Performance and Implementation

Antennas may look alike on the outside, but the important difference is inside. Other antennas may contain simple PIFA or monopole designs that interact with their surroundings, complicating layout or changing performance with use position. Ethertronics' antennas utilize patented Isolated Magnetic Dipole (IMD) technology to deliver a unique size and performance combination.

Greater Flexibility

Ethertronics' IMD technology enables the advance antenna design that delivers superior performance in reception critical applications. 1001011 is capable for off-ground and on-ground (over metal) environments. The 1001011 can also achieve ISM performance with proper layout shown on Appendix 1.

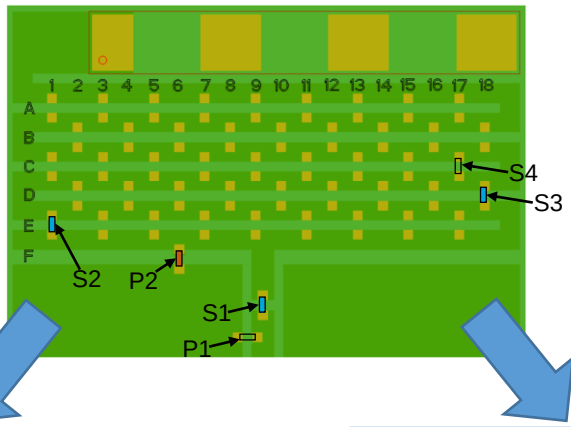
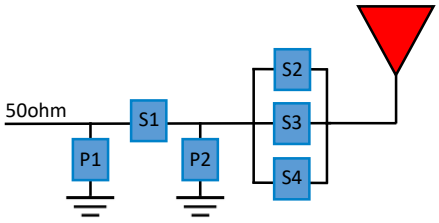
*Matching Pi Network (Baseline)





Tune Frequency Lower?	Outcome:
Move (S3) 0 Ohm from D18 towards D2 depending on requested antenna tuning. D18, D16, and D14 through D2 allows for on board tuning to shift frequency lower.	Antenna frequency will shift lower up to D2 tuning location

Tune Frequency Higher?	Outcome:
Keep (S3) 0 Ohm on D18. Add (S4) 0 Ohm on C17 to shift resonant frequency slightly higher. Continue to move C17 component towards C1 for more drastic tuning.	Antenna frequency will shift higher up to C1 tuning location
