Conductive Polymer Chip Capacitors (Extra Large Capacitance)

FEATURES

- · Ta-polymer technology
- High ripple capability
- High CV
- Surge robust
- Undertab LF

APPLICATIONS

- · For high component density PCB design like mobile, gaming, computer card
- IoT
- SSD
- Sensors

HOW TO ORDER

TECHNICAL SPECIFICATIONS

Technical Data:	All technical data relate to an ambient temperature of +25°C	
Capacitance Range:	1.0μF to 47μF	
Capacitance Tolerance:	±20%	
Leakage Current DCL:	Please see the ratings and part number reference table below	
Temperature Range:	-55°C to +105°C	

Note: Conductive Polymer Capacitors are designed to operate within the limits of the environmental conditions specified for each series. If operated continuously at their maximum temperature and / or humidity limit, or beyond these limits, capacitors may exhibit a parametric shift in capacitance and increases in ESR. These changes may occur earlier if the specified environmental conditions are exceeded. Similarly, their normal operational time period will be significantly extended if their general duty cycle includes operation below maximum temperature within humidity controlled environments. Careful attention should be paid to maximum temperature with associated high humidity environments as well as voltage derating, ripple current and current surges.

Please reference the KYOCERA AVX Conductive Polymer Capacitor Guidelines for more information or contact factory for application assistance.

Moisture Sensitivity Level (MSL) is defined according to J-STD-020. All technical data relates to an ambient temperature of +25C.

Capacitance and DF are measured at 120Hz, 0.5RMS with DC bias of 1.5 volts.

DCL is measured at rated voltage after 5 minutes.

ESR allowed to move up to 1.25 times catalog limit post mounting.

NOTE: KYOCERA AVX reserves the rights to supply higher voltage rating in the same case size, to the same reliability standards.
