Surface-Mount Device

SMD1812-260C-24V

RoHS 📚

I_H=Hold current: maximum current at which the device will not trip at 25° C still air reflow soldering of 260° C for 20 sec. I_T=Trip current: minimum current at which the device will always trip at 25° C still air reflow soldering of 260° C for 20 sec. V_{max}=Maximum continuous voltage device can withstand without damage at rated current

Imax=Maximum fault current device can withstand without damage at rated voltage.

 T_{trip} =Maximum time to trip(s) at assigned current reflow soldering of 260 $^\circ C$ for 20 sec.

Pd_{typ}=Typical power dissipation: typical amount of power dissipated by the device when in state air environment.

R_{min}= Minimum resistance of device in initial (un-soldered) state.

 R_{1max} =Maximum resistance of device at 25 °C measured one hour after reflow soldering of 260 °C for 20 sec.

Value specified is determined by using the PWB with 0.030 '*1.5oz copper traces.

Caution: Operation beyond the specified rating may result in damage and possible arcing and flame.

Environmental Specifications

| Test | Test Conditions | Accept /Reject Criteria |
|--------------------------------|--|-------------------------|
| Recommended storage conditions | 40°C max, 70% R.H. max | No change |
| Passive aging: | 85°C, 1000 hours | ≤ R _{1max} |
| Moisture Resistance | 85% RH,85℃,1000hrs | ≤ R _{1max} |
| Thermal Shock | MIL-STD-202 Method 107G +85°C /-40°C 20 times | ≤ R _{1max} |
| Vibration | MIL-STD-883C, Method 2007.1, Condition A | No change |
| Solvent Resistance | MIL-STD-202, Method 215 | No change |
| Moisture Level Sensitivity | Level 1, J-STD-020C | No change |

Thermal Derating [Hold Current (A) at Ambient Temperature (°C)]

| Dart Number | | | Maxim | um Ambient (| Operating ⁻ | Femperatur | re (℃) | | |
|------------------|------|------|-------|--------------|------------------------|------------|--------|------|------|
| Part Number | -40 | -20 | 0 | 25 | 40 | 50 | 60 | 70 | 85 |
| SMD1812-260C-24V | 3.90 | 3.42 | 2.96 | 2.60 | 2.20 | 2.07 | 1.94 | 1.35 | 1.00 |

Solder Reflow Recommendation

Reflow --curve

SMD1812-260C-24V

Recommended reflow methods:IR,hot air oven ,nitrogen oven

Devices can be cleaned using standard industry methods and solvents. **NOTE:**

If reflow temperatures exceed the recommended profile, devices may not meet the performance requirements.

Caution: Operation beyond the rated voltage or current may result in rupture electrical arcing or flame

Packaging Quantity and Marking

| Device | Marking | Standard Quantity (pcs) |
|------------------|----------|-------------------------|
| SMD1812-260C-24V | B 260 | 1500 |

For additional information, please contact your local Sales Representative. ©Copyright 2006, BNstar Co.,Ltd.

CAUTION:

Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame. The devices are intended for protection against occasional over-current or over temperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated. Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
