

# DATA SHEET <u>SPARK GAP PROTECTORS</u>

**POWER SUPPLIES** BK1 series

RoHS compliant & Halogen free

**SPARK GAP** 

# $\frac{2}{7}$

# Spark Gap (SPG) Data Sheet

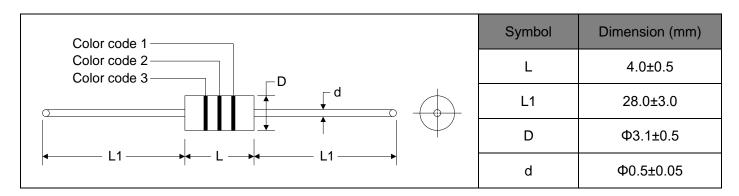

#### Features

- Approximately zero leaking current before clamping voltage
- Less decay at on/off state.
- High capability to withstand repeated lightning strikes.
- Low electrode capacitance(≤0.8pF) and high isolation(≥100M $\Omega$ ).
- RoHS compliant.
- Bilateral symmetrical.
- Temperature, humidity and lightness insensitive.
- Operating temperature: -40°C ~ +85°C
- Storage temperature: -40°C ~ +125°C
- Meets MSL level 1, per J-STD-020

## Applications

- Power Supplies
- Motor sparks eliminating
- Relay switching spark absorbing
- Data line pulse guarding
- Telephone/Fax/Modem
- High frequency signal transmitters/receivers
- Satellite antenna
- Radio amplifiers
- Alarm systems
- Cathode ray tubes in Monitors/TVs

## Dimensions

# **Test Methods and Results**

| Items                     | Test Method  | Standard                               |  |
|---------------------------|--|--|--|
| DC Spark-over<br>Voltage  | Measure starting discharge voltage (Vs) by<br>gradually increasing applied DC voltage. Test<br>current is 0.5mA max. And the DC voltage<br>ascends up within 100V/second.                                |  |  |
| Insulation<br>Resistance  | Measure the insulation resistance across the terminal at regular voltage. But the test voltage doesn't over the DC spark-over voltage.   | Meet specified value.                  |  |
| Capacitance               | Measure the electrostatic capacitance by applying a voltage of less than 6V (at 1KHz) between terminals.   |  |  |
| Static Life               | 10KV with 1500pf condenser is discharged through $0\Omega$ resistor. 200 times at an interval of 10sec.  | │                                      |  |
| Surge Current<br>Capacity | 1.2/50 $\mu$ s & 8/20 $\mu$ s, 3000A, electrically<br>connected with a resistor (1~2 $\Omega$ ), ±5 times,<br>each time interval 60 seconds. Thereafter,<br>outer appearance shall be visually examined. | No crack and no failures               |  |
| Cold Resistance           | Measurement after -40°C/1000 HRS & normal temperature/2 HRS.   |  |  |
| Heat Resistance           | Measurement after 125℃/1000 HRS & normal temperature/2 HRS.  |  |  |
| Humidity Resistance       | Measurement after humidity 90~95 $^{\circ}$ C (45 $^{\circ}$ C )<br>/1000 HRS & normal temperature/2 HRS.  | Features are conformed to rated spec.  |  |
| Temperature Cycle         | 10 times repetition of cycle -40°C/30min<br>→normal, temp/2 min →125°C/30min,<br>measurement after normal temp/2 HRS.  |  |  |
| Solder Ability            | Apply flux and immerse in molten solder $230\pm5^{\circ}$ for 3sec up to the point of 1.5mm from body. Check for solder adhesion.  | Lead wire is evenly covered by solder. |  |
| Solder Heat               | Measurement after lead wire is dipped up to the point of 1.5mm from body into $260\pm5^{\circ}C$ solder for 10sec.   | Conformed to rated spec.               |  |
| Pull Strength             | Apply 0.5kg load for 10sec.  | Lead shall not pull out to snap.       |  |
| Flexural Strength         | Bend lead wire at the point of 2mm from body<br>under 0.25 load and back to its original point.<br>Repeat 1 time.  |  |  |

## **Recommended Soldering Conditions**

Cleaning

When using ultrasonic cleaning, the board may resonate if the output power is too high. Since this vibration can cause cracking or a decrease in the adherence of the termination, we recommend that you use the conditions below.

Frequency: 40kHz max.

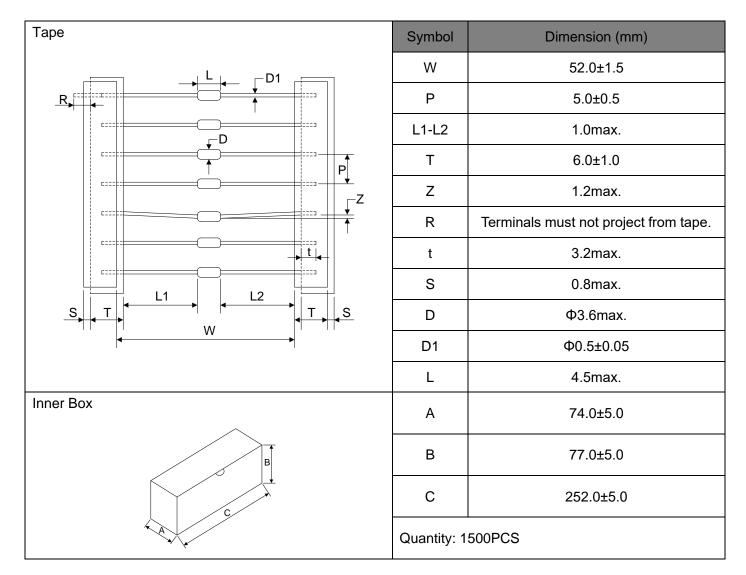

Output power: 20W/liter

Cleaning time: 5 minutes max.
