Ultra Low ON-Resistance, Low Voltage, Dual, SPDT Analog Switch

BCT4005

Ultra Low ON-Resistance, Low Voltage, Dual, SPDT Analog Switch

GENERAL DESCRIPTION

The BCT4005 is a high-performance, dual single-pole double-throw (SPDT) analog switch. Specified over a wide operating power supply voltage range, 1.65V to 5.0V, Targeted applications include battery powered equipment that benefit from ultra-low ON-resistance (0.4Ω) and fast switching speeds.

Break-before-make switching prevents both switches being enabled simultaneously. This eliminates signal disruption during switching.

FEATURES

- ◆ Low ON Resistance: 0.4 Ω at 5.0V
- ◆ ON-Resistance Matching: 0.04 Ω (TYP)
- ◆ ON-Resistance Flatness: 0.08Ω (TYP)
- ◆ Rail-to-Rail Signal Range
- ◆ Break-Before-Make Switching
- ◆ Fast Switching time
 - $T_{ON} = 10\text{ns}$
 - $T_{OFF} = 7\text{ns}$
- ◆ -3dB Bandwidth: 70 MHz

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. Broadchip recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

Broadchip reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact Broadchip sales office to get the latest datasheet.
