

AH3564Q

Description

The AH3564Q is an AECQ100-qualified high-voltage, high-sensitivity Hall effect omnipolar switch IC designed for position and proximity sensing in automotive applications, such as in seat and seatbelt buckle, steering lock/immobilization, gear stick, transmission actuator and gear position, HVAC compression, wiper, door/trunk closure, and so on. To support a wide range of demanding applications, the design is optimized to operate over the supply range of 3.0V to 28V. With chopper-stabilized architecture and an internal bandgap regulator to provide temperature compensated supply for internal circuits, the AH3564Q provides a reliable solution over the whole operating range. For robustness and protection, the device has a reverse blocking diode with a zener clamp on the supply. The output has an overcurrent limit and a zener clamp.

The single open-drain output can be switched on with south or north pole of sufficient strength. When the magnetic flux density (B) perpendicular to the package is larger than the operate point (B_{OP}), the output is switched on (pulled low) and stays on until the magnetic flux density B is lower than the release point (B_{RP}).

Features

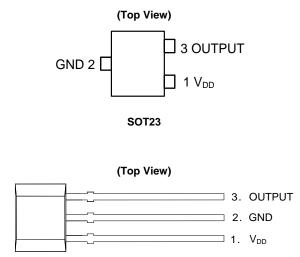

- Omnipolar Operation
- High Sensitivity: B_{OP} and B_{RP} of ±40G and ±25G Typical
- Single Open Drain Output with Overcurrent Limit
- 3.0V to 28V Operating Voltage Range
- Chopper Stabilized Design Provides
 - Superior Temperature Stability
 - Minimal Switch Point Drift
 - Enhanced Immunity to Stress
- Good RF Noise Immunity
- Reverse Blocking Diode
- Zener Clamp on Supply and Output Pins
- -40°C to +150°C Operating Temperature
- ESD: HBM > 8kV, CDM: >2kV
- Industry Standard SOT23 and SIP-3 (Ammo Pack), SIP-3 (Bulk Pack) Packages
- Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)
- Halogen and Antimony Free. "Green" Device (Note 3)

Notes: 1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.

- 2. See https://www.diodes.com/quality/lead-free/ for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
- 3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

HIGH VOLTAGE HIGH SENSITIVITY AUTOMOTIVE HALL EFFECT OMNIPOLAR SWITCH

Pin Assignments

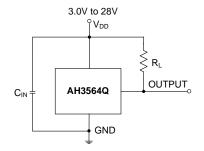

SIP-3 (Bulk Pack)

Applications

- · Position and Proximity Sensing in Automotive Applications.
- Open and Close Detect
- Position Detect
- Level Detect
- Flow Meters
- Contactless Switches
- Seatbelt Buckle
- Seat Position

Typical Applications Circuit

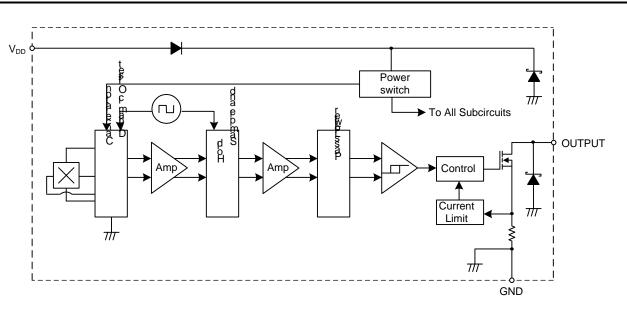

Note: 4. C_{IN} is for power stabilization and to strengthen the noise immunity, the recommended capacitance is 10nF ~ 100nF. R_L is the pull-up resistor.

Pin Descriptions

Absolute Maximum Ratings (Note 5 & 6) (@T_A = +25°C, unless otherwise specified.)

5. Stresses greater than the 'Absolute Maximum Ratings' specified above may cause permanent damage to the device. These are stress ratings only; Notes: functional operation of the device at these or any other conditions exceeding those indicated in this specification is not implied. Device reliability may be affected by exposure to absolute maximum rating conditions for extended periods of time.

6. The absolute maximum V_{DD} of 32V is a transient stress rating and is not meant as a functional operating condition. It is not recommended to operate the device at the absolute maximum rated conditions for any period of time.

Recommended Operating Conditions (@T_A = -40°C to +150°C, unless otherwise specified.)

| Symbol | Parameter | Condition | Rating | Unit |
|-----------------|-----------------------------|-----------|-------------|------|
| V _{DD} | Supply Voltage | Operating | 3.0 to 28 | V |
| T _A | Operating Temperature Range | Operating | -40 to +150 | °C |

Electrical Characteristics (Note 7 & 8) (@T_A = -40°C to +150°C, V_{DD} = 3V to 28V, unless otherwise specified.)

| Symbol | Parameter | Condition | Min | Тур | Max | Unit |
|-------------------|---|---|-----|------|------|------|
| VOUT_ON | Output ON Voltage | $I_{OUT} = 20 \text{mA}, \text{B} > B_{OP}$ | — | 0.2 | 0.4 | V |
| I _{LKG} | Output Leakage Current (When Output is Off) | V_{OUT} = 28V, B < B _{RP} , Output Off | _ | <0.1 | 10 | μA |
| 1 | Supply Current | Output open, T _A = +25°C | — | 3 | 3.5 | mA |
| I _{DD} | Supply Culterin | Output open, T _A = -40°C to +150°C | — | — | 4 | mA |
| | | V _{DD} = -18V, T _A = +25°C | — | 0.6 | | μA |
| IDD R | Reverse Supply Current | $V_{DD} = -18V, T_A = -40^{\circ}C \text{ to } +150^{\circ}C$ | — | 0.6 | 1500 | μA |
| יטט_ג | Reverse Supply Cullent | V _{DD} = -28V, T _A = +25°C | — | 1.6 | | μA |
| | | $V_{DD} = -28V, T_A = -40^{\circ}C \text{ to } +150^{\circ}C$ | — | 1.6 | 2500 | μA |
| t _{P_ON} | Device Power-On Time (Start-up Time) | $V_{DD} \ge 3V, B \ge B_{OP}$ (Note 7) | — | 10 | _ | μs |
| f _C | Chopping Frequency | — | — | 800 | — | kHz |
| t _D | Response Time Delay (Time from magnetic threshold reached to the start of the output rise or fall) | (Note 9) | _ | 3.75 | _ | μs |
| t _R | Output Rising Time (External pull-up resistor RL and load capacitance dependent) | $R_L = 1k\Omega, C_L = 20pF$ | _ | 0.2 | 1 | μs |
| t _F | Output Falling Time (Internal switch resistance and load capacitance dependent) | $R_L = 1k\Omega, C_L = 20pF$ | _ | 0.1 | 1 | μs |
| I _{OCL} | Output Current Limit | B > B _{OP} , (Note 10) | 30 | — | 55 | mA |
| Vz | Zener Clamp Voltage | I _{DD} = 5mA | 28 | — | | V |

Notes: 7. When power is initially turned on, Vbb must be within its correct operating range (3.0V to 28V) to guarantee the output sampling. The output state is valid after the start-up time of 10µs typical from the operating voltage reaching 3V.

8. Typical values are defined at T_A = +25°C, V_{DD} = 12V. Maximum and minimum values over the operating temperature range is not tested in production but guaranteed by design, process control and characterization.
guaranteed by design, process control and characterization.

10. The device will limit the output current I_{OUT} to current limit of I_{OCL} .

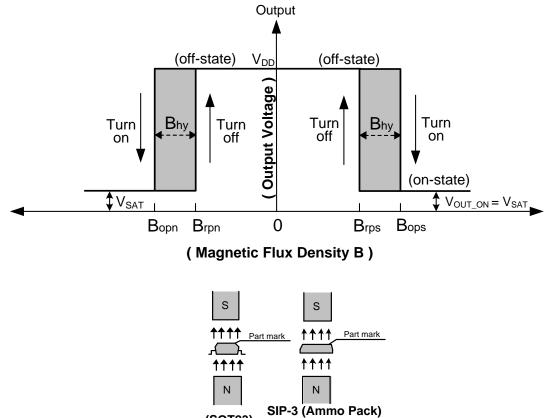

Magnetic Characteristics (Note 11 &12) (T_A = -40°C to +150°C, V_{DD} = 3.0V to 28V, unless otherwise specified.)

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

- A. Life support devices or systems are devices or systems which:
 - 1. are intended to implant into the body, or
 - 2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
- B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
