Description

The PI6CB332000 is an 20-output very low-power PCIe clock buffer. It is capable of distributing the reference clocks for UPI, SAS, SATA, and other applications as well. It takes an reference input to fanout 20 100MHz low-power differential HCSL outputs with on-chip terminations. The on-chip termination can save 80 external resistors and make layout easier. 8 OE pins combined with SMBus register pins for controlling each output provides easier power management.

It uses Diodes' proprietary design to achieve very-low jitter that meets PCIe Gen1/Gen2/Gen3/Gen4/Gen5 requirement.
