

### Very Low Power 8-Output PCle Clock Buffer With On-chip Termination

#### **Features**

- → 1.8V supply voltage
- → HCSL input: 100MHz, also support 50MHz or 125MHz via SMBus
- → 8 differential low power HCSL outputs with on-chip termination
- → Individual output enable
- → Programmable Slew rate and output amplitude for each output
- → Differential outputs blocked until PLL is locked
- → Strapping pins or SMBus for configuration;
- → 3.3V tolerant SMBus interface support
- → Very low jitter outputs
  - Differential cycle-to-cycle jitter <50ps
  - Differential output-to-output skew <50ps
  - PCIe Gen1/Gen2/Gen3/Gen4 compliant
- → Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)
- → Halogen and Antimony Free. "Green" Device (Note 3)
- → For automotive applications requiring specific change control (i.e. parts qualified to AEC-Q100/101/200, PPAP capable, and manufactured in IATF 16949 certified facilities), please contact us or your local Diodes representative.

https://www.diodes.com/quality/product-definitions/

→ Packaging (Pb-free & Green): 48-lead 6×6mm TQFN

### **Description**

The PI6CB18801 is an 8-output very low power PCIe Gen1/Gen2/Gen3/Gen4 clock buffer. It takes an reference input to fanout eight 100MHz low power differential HCSL outputs with on-chip terminations. The on-chip termination can save 32 external resistors and make layout easier. Individual OE pin for each output provides easier power management.

It uses Diodes proprietary PLL design to achieve very low jitter that meets PCIe Gen1/Gen2/Gen3/Gen4 requirements. Other than PCIe 100MHz support, this device also support Ethernet application with 50MHz or 125MHz via SMBus. It provides various options such as different slew rate and amplitude through strapping pins or SMBUS so that users can configure the device easily to get the optimized performance for their individual boards.

### **Block Diagram**

#### Notes:

- 1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
- 2. See https://www.diodes.com/quality/lead-free/ for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
- 3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

## **Pin Configuration**

## **Pin Description**

| Pin Number            | Pin Name             | Ту               | pe        | Description   |
|-----------------------|----------------------|------------------|-----------|---|
| 1                     | SADR_TRI             | Input            | Tri-level | Latch to select SMBus Address. This pin has an internal pull-down   |
| 2                     | BW_SEL_TRI           | Input            | Tri-level | Latch to select low loop bandwidth, bypass PLL, and high loop bandwidth. This pin has both internal pull-up and pull-down |
| 3                     | NC                   |                  |           | Internal connected for feedback loop. Do not connect this pin   |
| 4                     | NC                   |                  |           | Internal connected for feedback loop. Do not connect this pin   |
| 5                     | V <sub>DD</sub> _R   | Power            |           | Power supply for input differential buffers   |

| 43         | OE6#              | Input  | CMOS | Active low input for enabling Q6 pair. This pin has an internal pull-down. 1 = disable outputs, 0 = enable outputs  |
| 44         | Q7+               | Output | HCSL | Differential true clock output  |
| 45         | Q7-               | Output | HCSL | Differential complementary clock output   |
| 46         | OE7#              | Input  | CMOS | Active low input for enabling Q7 pair. This pin has an internal pulldown. 1 =disable outputs, 0 = enable outputs  |
| 48         | PD#               | Input  | CMOS | Input notifies device to sample latched inputs and start up on first high assertion. Low enters Power Down Mode, subsequent high assertions exit Power Down Mode. This pin has internal pull-up resistor. |
| 49         | EPAD              | Power  |      | Connect to Ground   |

### **SMBus Address Selection Table**

|   | SADR | Address | +Read/Write Bit |
|---|------|---------|-----------------|
| State of SADR on first application of PD# | 0    | 1101011 | X               |
|   | M    | 1101100 | X               |
|   | 1    | 1101101 | X               |

## **Power Management Table**

| PD# | IN      | SMBus OE bit | OEn# | Qn+     | Qn-     | PLL Status        |
|-----|---------|--------------|------|---------|---------|-------------------|
| 0   | X       | X            | X    | Low     | Low     | Off               |
| 1   | Running | 0            | X    | Low     | Low     | On <sup>(1)</sup> |
| 1   | Running | 1            | 0    | Running | Running | On <sup>(1)</sup> |
| 1   | Running | 1            | 1    | Low     | Low     | On <sup>(1)</sup> |

## **PLL Operating Mode Select Table**

| BW_SEL_TRI | Operating Mode          | Byte1 [7:6] Readback | Byte1 [4:3] Readback |
|------------|-------------------------|----------------------|----------------------|
| 0          | PLL with low Bandwidth  | 00                   | 00                   |
| M          | PLL Bypass              | 01                   | 01                   |
| 1          | PLL with high Bandwidth | 11                   | 11                   |

## Frequency Select table

| Freq. Select Byte 3 [4:3] | IN (MHz) | Qn (MHz) |
|---------------------------|----------|----------|
| 00 (default)              | 100      | 100      |
| 01                        | 50       | 50       |
| 10                        | 125      | 125      |
| 11                        | Reserved | Reserved |

<sup>1.</sup> If PLL Bypass mode is selected, the PLL will be off and outputs will be running.

## **Maximum Ratings**

(Above which useful life may be impaired. For user guidelines, not tested.)

| Storage Temperature                            | 65°C to +150°C        |
|--|-----------------------|
| Supply Voltage to Ground Potential, $V_{DDxx}$ | 0.5V to +2.5V         |
| Input Voltage0.5V to V <sub>DD+</sub>          | 0.5V, not exceed 2.5V |
| SMBus, Input High Voltage                      | 3.6V                  |
| ESD Protection (HBM)                           | 2000 V                |
| Junction Temperature                           | 125 °C max            |

#### Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## **Operating Conditions**

Temperature = T<sub>A</sub>; Supply voltages per normal operation conditions; See test circuits for the load conditions

| Symbol                                     | Parameters  | Conditions  | Min.   | Тур.     | Max. | Units |

| f <sub>IN156</sub> | Input Frequency                         | 50MHz PLL  | 30   | 50   | 65    | MHz   |
| t <sub>STAB</sub>  | Clock stabilization                     | From $V_{\rm DD}$ Power-Up and after input clock stabilization or de-assertion of PD# to 1st clock |      | 0.6  | 1.0   | ms    |
| t <sub>RF</sub>    | Diff. Input Slew Rate <sup>(2)</sup>    | Measured differentially  | 0.4  |      |       | V/ns  |
| I <sub>IN</sub>    | Diff. Input Leakage Current             | $V_{IN} = V_{DD}, V_{IN} = GND$  | -5   | 0.01 | 5     | uA    |
| $t_{DC}$           | Diff. Input Duty Cycle                  | Measured differentially  | 45   |      | 55    | %     |
| tj <sub>c-c</sub>  | Diff. Input Cycle to cycle jitter       | Measured differentially  |      |      | 125   | ps    |

#### Note:

- 1. Guaranteed by design and characterization, not 100% tested in production
- 2. Slew rate measured through +/-75mV window centered around differential zero
- 3. The device can be driven by a single-ended clock by driving the true clock and biasing the complement clock input to the Vbias, where Vbias is  $(V_{IH}-V_{IL})/2$

### **HCSL Output Characteristics**

Temperature = T<sub>A</sub>; Supply voltages per normal operation conditions; See test circuits for the load conditions

| Symbol            | Parameters  | Condition                                | Min. | Тур. | Max. | Units |
|-------------------|---|--|------|------|------|-------|
| V <sub>OH</sub>   | Output Voltage High <sup>(1)</sup>                  | Statistical measurement on single-ended  | 660  | 774  | 900  | mV    |
| V <sub>OL</sub>   | Output Voltage Low <sup>(1)</sup>                   | signal using oscilloscope math function  | -150 |      | 150  | mV    |

| Voswing           | Output Swing Voltage <sup>(1,2,3)</sup>             | Scope averaging off                      | 300  | 1536 |      | mV    |
| V <sub>OC</sub>   | Output Cross Voltage <sup>(1,2,4)</sup>             |  | 250  | 430  | 550  | mV    |
| DV <sub>OC</sub>  | V <sub>OC</sub> Magnitude Change <sup>(1,2,5)</sup> |  |      | 12   | 140  | mV    |

#### Note:

- 1. At default SMBUS amplitude settings
- 2. Guaranteed by design and characterization, not 100% tested in production
- 3. Measured from differential waveform
- 4. This one is defined as voltage where Q+ = Q- measured on a component test board and only applied to the differential rising edge
- 5. The total variation of all Vcross measurements in any particular system. This is a subset of Vcross\_min/max allowed.

### **HCSL Output AC Characteristics**

Temperature = T<sub>A</sub>; Supply voltages per normal operation conditions; See test circuits for the load conditions

| Symbol             | Parameters                             | Condition  | Min. | Тур. | Max. | Units |

| $t_{DC}$             | Duty Cycle <sup>(1,2)</sup>                                | Measured differentially, PLL Mode   | 45   | 50   | 55   | %     |
| $t_{\rm DCD}$        | Duty Cycle Distortion <sup>(1,7)</sup>                     | Measured differentially, PLL Bypass Mode at 100MHz  | -1   | 0    | 1    | %     |
| t <sub>STARTUP</sub> | Start up time  |   |      |      | 10   | ms    |
| t <sub>LOCK</sub>    | PLL lock time  |   |      |      | 20   | ms    |

#### Note:

- 1. Guaranteed by design and characterization, not 100% tested in production
- 2. Measured from differential waveform
- 3. Slew rate is measured through the Vswing voltage range centered around differential 0V, within +/-150mV window
- 4. Slew rate matching is measured through +/-75mV window centered around differential zero
- 5. See http://www.pcisig.com for complete specs
- 6. Sample size of at least 100k cycles. This can be extrapolated to 108ps pk-pk @ 1M cycles for a BER of  $10^{-12}$
- 7. Duty cycle distortion is the difference in duty cycle between the out and input clock when te device is operated in the PLL bypass mode
- 8. The Min and Max values of each BW setting track each other, low BW max will never occur with high BW min
- 9. Applies to all differential outputs
- 10. For additive jitter RMS value is calculated by the following equation = SQRT [(total jitter)\* $^2$  (input jitter)\* $^2$ ]

### **SMBus Serial Data Interface**

PI6CB18801 is a slave only device that supports block read and block write protocol using a single 7-bit address and read/write bit as shown below.

Read and write block transfers can be stopped after any complete byte transfer.

### **Address Assignment**

| A6 | A5 | A4 | A3 | A2           | A1                                | A0 | R/W |
|----|----|----|----|--------------|-----------------------------------|----|-----|
| 1  | 1  | 0  | 1  | See SBMus Ad | See SBMus Address Selection table |    | 1/0 |

Note: SMBus address is latched on SADR pin

#### **How to Write**

### **Ordering Information**

| Ordering Code       | Package Code | Package Description                            | Pin 1 Location   |
|---------------------|--------------|--|------------------|
| PI6CB18801ZLIEX     | ZL           | 48-Contact, Very Thin Quad Flat No-Lead (TQFN) | Top Right Corner |
| PI6CB18801ZLIEX-13R | ZL           | 48-Contact, Very Thin Quad Flat No-Lead (TQFN) | Top Left Corner  |

#### Notes:

- 1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
- 2. See https://www.diodes.com/quality/lead-free/ for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
- 3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.
- 4. I = Industrial
- 5. E = Pb-free and Green
- 6. X suffix = Tape/Reel

Diodes Incorporated and its subsidiaries reserve the right to make modifications, enhancements, improvements, corrections or other changes without further notice to this document and any product described herein. Diodes Incorporated does not assume any liability arising out of the application or use of this document or any product described herein; neither does Diodes Incorporated convey any license under its patent or trademark rights, nor the rights of others. Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel.

Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

This document is written in English but may be translated into multiple languages for reference. Only the English version of this document is the final and determinative format released by Diodes Incorporated.

#### LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

- A. Life support devices or systems are devices or systems which:
  - 1. are intended to implant into the body, or
- 2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
- B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
