

ENHANCED HIGH-SIDE CURRENT MONITOR

Description

The ZXCT1010 is a high side current sense monitor. Using this device eliminates the need to disrupt the ground plane when sensing a load current.

It is an enhanced version of the ZXCT1009 offering reduced typical output offset and improved accuracy at low sense voltage.

The wide input voltage range of 20V down to as low as 2.5V make it suitable for a range of applications. A minimum operating current of just 4μA, combined with its SOT25 package make suitable for portable battery equipment.

Features

- Low cost, accurate high-side current sensing
- Output voltage scaling
- Up to 2.5V sense voltage
- 2.5V to 20V supply voltage range
- 300nA typical offset current
- 3.5μA quiescent current
- 1% typical accuracy
- SOT25 package
- **Totally Lead-Free & Fully RoHS Compliant(Note 1 & 2)**
- **Halogen and Antimony Free. "Green" Device(Note 3)**

Notes: 1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
 2. See http://www.diodes.com/quality/lead_free.html for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
 3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

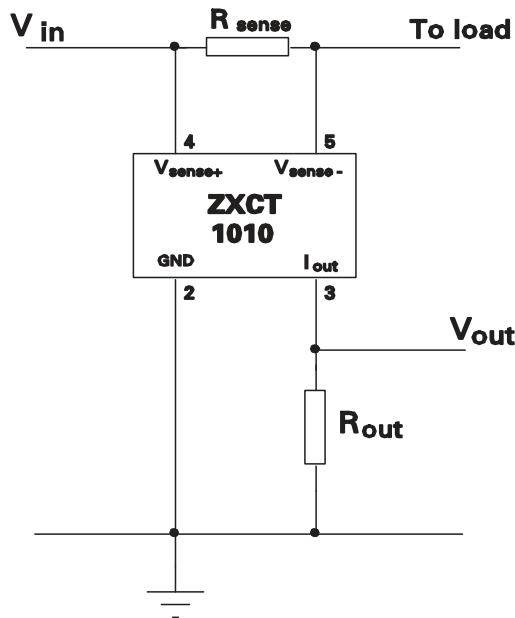

Pin Assignments

Applications

- Battery chargers
- Smart battery packs
- DC motor control
- Over current monitor
- Power management
- Programmable current source

Typical Applications Circuit

Pin Descriptions

Pin Number	Pin Name	Function
1	NC	No connection
2	GND	Ground
3	I _{OUT}	Output current, proportional to V _{IN} - V _{LOAD}
4	V _{SENSE-}	Supply voltage
5	V _{SENSE+}	Connection to load/battery

Functional Block Diagram

Absolute Maximum Ratings (@T_A = +25°C, unless otherwise specified.)

Parameter	Rating	Unit
Voltage on any pin (relative to I _{OUT})	-0.6 to +20	V
Continuous output current, I _{OUT}	25	mA
Continuous sense voltage, V _{SENSE} (Note 4)	-0.5 to +0.5	V
Operating temperature, T _A	-40 to +85	°C
Storage temperature	-55 to +125	°C
Package power dissipation (@T _A = +25°C)	SOT25	300
		mW

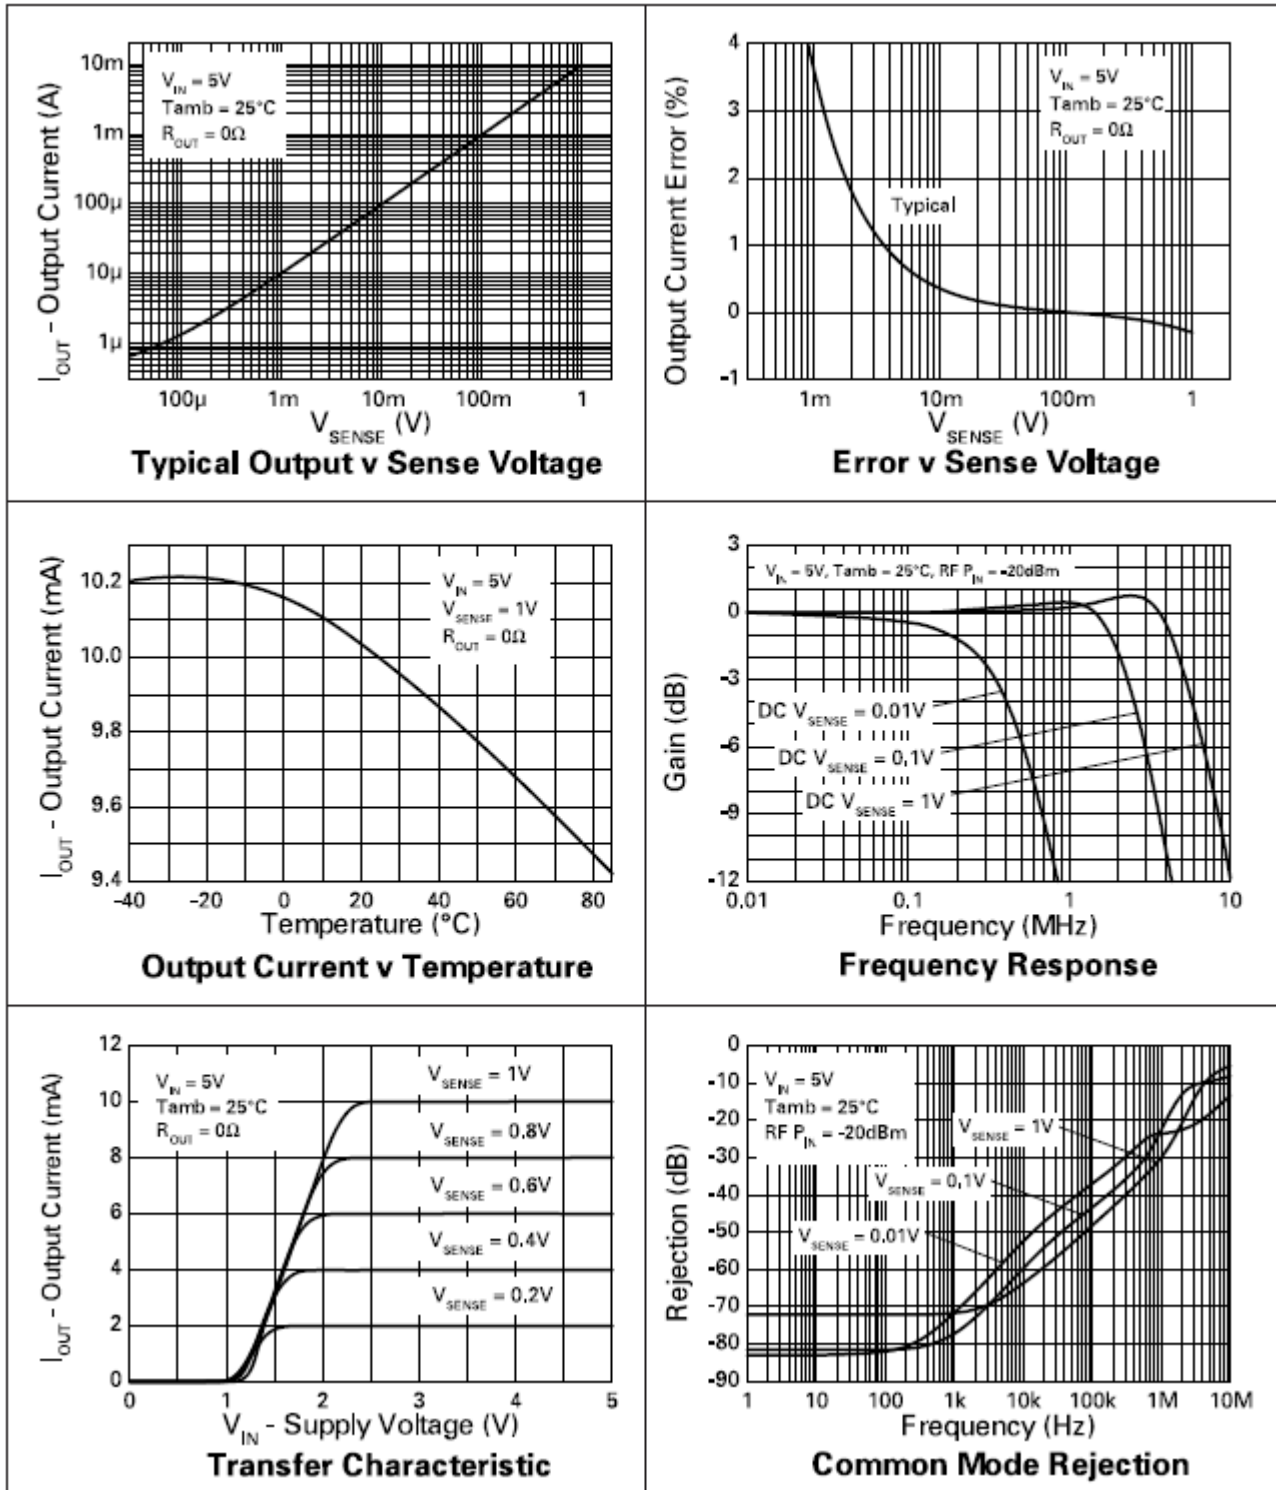

Note: 4. Operation above the absolute maximum rating may cause device failure. Operation at absolute maximum ratings, for extended periods, may reduce device reliability

Electrical Characteristics (@T_A = +25°C, unless otherwise specified.)

Symbol	Parameter	Conditions	Limits			Units
			Min	Typ	Max	
V _{IN}	V _{CC} range	-	2.5	-	20	V
I _{OUT}	Output Current (Note 5)	V _{SENSE} = 0V	0	0.3	10	μA
		V _{SENSE} = 10mV	85	100	115	
		V _{SENSE} = 100mV	0.975	1.0	1.025	mA
		V _{SENSE} = 200mV	1.95	2.0	2.05	
		V _{SENSE} = 1V	9.7	10.0	10.3	
I _q	Ground pin current	V _{SENSE} = 0V	-	3.5	8	μA
V _{SENSE}	Sense Voltage (Note 6)		0	-	2500	mV
I _{SENSE-}	V _{SENSE-} Input Current		-	-	100	nA
A _{CC}	Accuracy	R _{SENSE} = 0.1Ω; V _{SENSE} = 200mV	-2.5	-	2.5	%
G _M	Transconductance, I _{OUT} /V _{SENSE}		-	10000	-	μA/V
BW	Bandwidth	V _{SENSE(DC)} = 10mV, RF P _{IN} = -40dBm (Note 7)	-	300	-	kHz
		V _{SENSE(DC)} = 100mV, RF P _{IN} = -20dBm (Note 7)	-	2	-	MHz

Notes: 5. Include input offset voltage contribution
6. V_{SENSE} is defined as the differential voltage between V_{SENSE+} and V_{SENSE-}, V_{SENSE} = V_{SENSE+} - V_{SENSE-} = V_{IN} - V_{LOAD} = I_{LOAD} * R_{SENSE}
7. -20dBm = 63mV_{P-P} into 50Ω

Typical Performance Characteristics

Power Dissipation

The maximum allowable power dissipation of the device for normal operation (P_{MAX}), is a function of the package junction temperature ($T_{J(MAX)}$), and ambient temperature (T_{AMB}), according to the expression.

$$P_{MAX} = (T_{J(MAX)} - T_{AMB})/\theta_{JA}$$

The device power dissipation, P_D is given by the expression:

$$P_D = I_{OUT} \times (V_{IN} - V_{OUT}) \text{ Watts}$$

Application Information

The following lines describes how to scale a load current to an output voltage.

$$V_{SENSE} = V_{IN} - V_{LOAD}$$

$$V_{OUT} = 0.01 \times V_{SENSE} \times R_{OUT}$$

E.g.

A 1.0A current is to be represented by a 100mV output voltage:

- 1) Choose the value of R_{SENSE} to give $50mV > V_{SENSE} > 500mV$ at full load.

For example, $V_{SENSE} = 100mV$ at 1.0A. $R_{SENSE} = 0.1/1.0 = > 0.1ohms$.

- 2) Choose R_{OUT} to give $V_{OUT} = 100mV$, when $V_{SENSE} = 100mV$.

Rearranging for R_{OUT} gives:

$$R_{OUT} = V_{OUT}/(V_{SENSE} \times 0.01)$$

$$R_{OUT} = 0.1/(0.1 \times 0.01) = 100\Omega$$

Typical Circuit Application:

When R_{LOAD} represented any load including DC motors, a charging battery or further circuitry that requires monitoring, R_{SENSE} can be selected on specific requirements of accuracy, size and power rating.

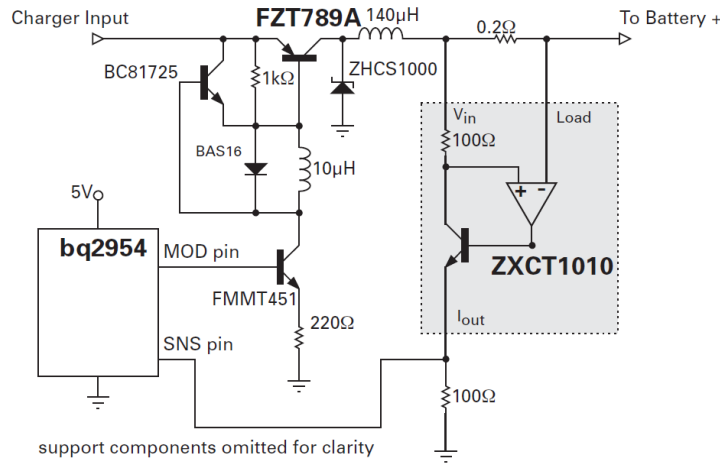

Typical Application Circuit

Application Information (cont.)

Li-ion Charger Circuit:

The figure below shows the ZXCT1010 supporting the Benchmarq bq2954 Charge Management IC. Most of the support components for the bq2954 are omitted for clarity. This design also uses the Zetex FZT789A high current Super-b PNP as the switching transistor in the DC-DC step down converter and the FMMT451 as the drive NPN for the FZT789A. The circuit can be configured to charge up to four Li-ion cells at a charge current of 1.25A. Charge can be terminated on maximum voltage, selectable minimum current, or maximum time out, switching frequency of the PWM loop is approximately 120kHz.

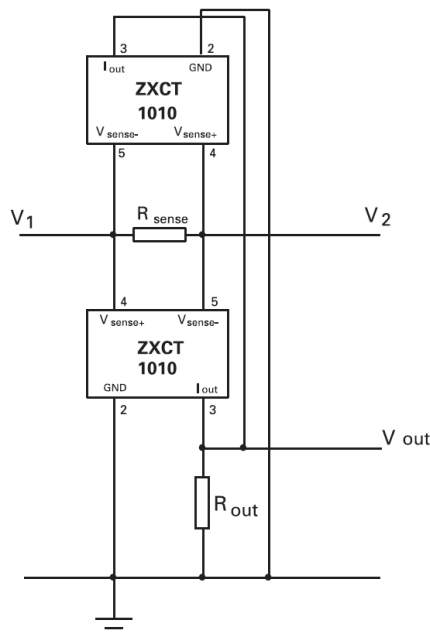

Bi-Directional Current Sensing:

The ZXCT1010 can be used to measure current bi-directionally, if two devices are connected as show below:

If the voltage V1 is positive with respect to the voltage V2 the lower device will be active, delivering a proportional output current to R_{out}. Due to the polarity of the voltage across R_{SENSE}, the upper device will be inactive and will not contribute to the current delivered to R_{out}. When V2 is more positive than V1, current will be flowing in the opposite direction, causing the upper device to be active instead.

Non-linearity will be apparent at small values of V_{SENSE} due to offset current contribution. Devices can use separate output resistors if the current direction is to be monitored independently.

Application Information (cont.)

Bi-Directional Transfer Function:

Output Current v Sense Voltage

PCB Trace Shunt Resistor for Low Cost Solution:

The figure below shows output characteristics of the device when using a PCB resistive trace for a low cost solution in replacement for a conventional shunt resistor. The graph shows the linear rise in voltage across the resistor due to the PTC of the material and demonstrates how this rise in resistance value over temperature compensates for the NTC of the device.

The figure opposite shows a PCB layout suggestion. The resistor section is 25mm x 0.25mm giving approximately 150mΩ using 1oz copper. The data for the normalized graph was obtained using a 1A load current and a 100Ω output resistor. An electronic version of the PCB layout is available by request.

Effect of Sense Resistor Material on Temperature Performance

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
