

## Description

The PAM8904E is a piezo sounder driver with integrated charge pump boost converter. The PAM8904E is capable of driving a ceramic/piezo sounder with 27V<sub>PP</sub> from a 4.5V power supply. The charge pump can operate in either 1x, 2x or 3x mode.

The boost converter operates at a fixed frequency of 100kHz and provides a 3X V<sub>IN</sub> output with a minimum number of external components. The PAM8904E can drive up to 47nF loading. Diodes Incorporated's unique drive technology provides a small inrush current, low EMI and high efficiency.

The PAM8904E includes built-in automatic shutdown and wake up that guarantees longer battery life. The PAM8904E features thermal shutdown, over current protection, over voltage protection and under voltage lock-out.

The PAM8904E is available in U-QFN3030-16 (Type B), U-QFN3030-12 (Type A) and W-QFN2020-12 (Type US) packages.

## Features

- Supply Voltage Range from 1.5V to 5.5V
- 18V<sub>PP</sub> Output from a 3V Supply
- Integrated Boost Converter Generates up to 13.5V Supply
- Input Signal 20Hz to 300kHz
- No Voltage Cross Output in Shutdown Mode
- Low Current Consumption
- Automatic Standby and Wake-up Control
- Available in Space Saving Packages U-QFN3030-16 (Type B), U-QFN3030-12 (Type A) and W-QFN2020-12 (Type US) Packages
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**
- **For automotive applications requiring specific change control (i.e. parts qualified to AEC-Q100/101/104/200, PPAP capable, and manufactured in IATF 16949 certified facilities), please [contact us](https://www.diodes.com/quality/product-definitions/) or your local Diodes representative.**  
<https://www.diodes.com/quality/product-definitions/>

- Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
  2. See <https://www.diodes.com/quality/lead-free/> for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
  3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

- Notes:
4. It is possible to drive V<sub>OUT</sub>, V<sub>O1</sub> and V<sub>O2</sub> to 3x V<sub>DD</sub>. A supply voltage of 4.5V or more should not be used in 3x mode as this will exceed the maximum output voltage rating.
  5. When designed under 3x mode, it should be carefully noted that the V<sub>OUT</sub> absolute maximum value should not exceed 13.5V.

## Application Information

### Charge Pump Mode Setting

The Charge Pump Mode (CPM) pins EN1 and EN2 are used to set the charge pump into mode 1x V<sub>DD</sub>, 2x V<sub>DD</sub>, 3x V<sub>DD</sub> or they can be used to put the PAM8904E into a forced low current shutdown mode.

DIN	EN1	EN2	MODE
0	—	—	Shutdown Mode
1	0	0	Shutdown Mode
1	0	1	1x Mode
1	1	0	2x Mode
1	1	1	3x Mode

V <sub>DD</sub> Range	Mode
1.5V to 4.5V	1x, 2x and 3x
1.5V to 5.5V	1x, 2x

### Timing Chart and Device Operation

When one or both of the EN pins are pulled high, the device enters normal operation mode. Refer to the above table for the mode selection. Once the PAM8904E senses a valid signal on the DIN pin, the charge pump will start and provide the desired voltage on the VOUT pin and the output drive VO1 and VO2 start to function after time t<sub>ON</sub> which is typically between 470µs and 2s depending on the mode chosen. Once the input signal on DIN is removed, the PAM8904E senses this and waits typically 42ms to ensure the signal has been removed. If there is no further valid signal within the time period t<sub>OFF</sub>, the PAM8904E enters into a low current standby mode.

### Timing Chart

## Application Information (continued)

### Output Configuration

The PAM8904E is able to be configured either in a differential or a single ended configuration.

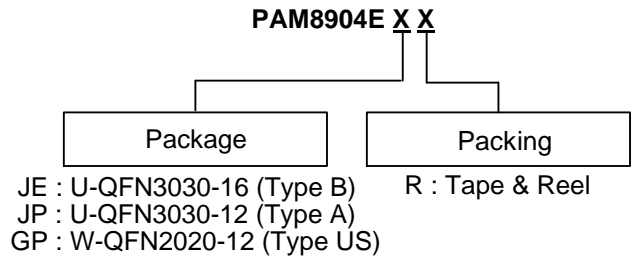

### Short-Circuit Protection

The PAM8904E has short circuit protection circuitry on the outputs to prevent damage. Once a short circuit is detected on the outputs, the chip will limit the total current to protect the output device. This is not a latched fault; once the short is removed, the normal operation is restored.

### Thermal Protection

If the junction temperature of the PAM8904E exceeds +150°C, the device will enter overtemperature shutdown. The outputs and the charge pump will be switched off. Once the junction temperature cools down to its normal operating condition, the IC will re-start automatically.
