#### Description

The PI6CG33401 is a 4-output very-low-power PCIe Gen1/Gen2/Gen3/Gen4/Gen5 clock generator. It uses 25MHz crystal or CMOS reference as an input to generate the 100MHz low-power differential HCSL outputs with on-chip terminations. The on-chip termination can save 16 external resistors and make layout easier. An additional buffered reference output is provided to serve as a low-noise reference for other circuitry.

It uses Diodes' proprietary PLL design to achieve very-low jitter that meets PCIe Gen1/Gen2/Gen3/Gen4/Gen5 requirements. It also provides various options such as different slew rate and amplitude through SMBUS, so users can configure the device easily to get the optimized performance for their individual boards. The device also supports selectable spread-spectrum options to reduce EMI for various applications.

#### Notes:

1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
2. See <https://www.diodes.com/quality/lead-free/> for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

## Crystal Circuit Connection

The following diagram shows PI6CG33401 crystal circuit connection with a parallel crystal. For the  $C_L = 8\text{pF}$  crystal, it is suggested to use  $C_1 = 8\text{pF}$  and  $C_2 = 8\text{pF}$ .  $C_1$  and  $C_2$  can be adjusted to fine tune to the target ppm of crystal oscillator according to different board layouts based on the following formula in the Crystal Capacitor Calculation diagram.
