Notes:

- 1. A feedback clock is required for lock. Pin 15 can be connected to pin 12 as shown above.
- 2. The network R1, C1:C2 comprises the external loop filter. The loop bandwidth and jitter peaking profiles are set by changing these values. Please consult factory to meet your requirement.
- 3. The crystal and loop filter components should be placed on the same side of the board as the IC. Components should be placed as close as possible to IC (within 300 mils).
- 4. A ground ring should enclose the loop filterr components along with pins 2 and 4.
