

#### DATASHEET

# 1.6mm round Subminiature Infrared LED IR26-21C/L447/CT

#### **Features**

- Small double-end package
- Low forward voltage
- Good spectral matching to Si photo detector
- . Package in 12mm tape on 7" diameter reel.
- Pb free
- The product itself will remain within RoHS compliant version.
- Compliance with EU REACH
- Compliance Halogen Free.(Br<900 ppm,Cl<900 ppm,Br+Cl<1500 ppm)</li>

### **Descriptions**

- IR26-21C/L447/CT is an infrared emitting diode in miniature SMDpackage which is molded in a water clear plastic with sphericaltop view lens.
- The device is spectrally matched with siliconLEDs and phototransistor

### **Applications**

- PCB mounted infrared sensor
- Infrared emitting for miniature light barrier

- Floppy disk drive
- Optoelectronic switch
- Smoke detector

#### **Precautions For Use**

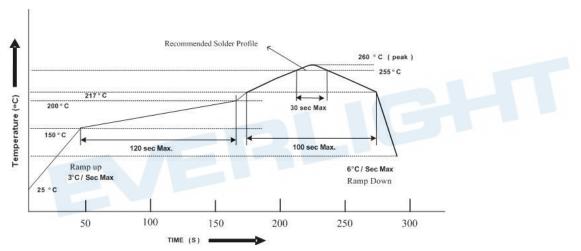

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

- 2. Storage
  - 2.1 Do not open moisture proof bag before the products are ready to use.
  - 2.2 After opening the package: The LEDs should be kept at 30 ℃ or less and 60%RH or less.
  - 2.3 The LEDs should be used within 168 hours (7days) after opening the package.
  - 2.4 I If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment : 60±5℃ for 24 hours 3. Soldering Condition

3.1 Lead solder temperature profile

- 3.2 Reflow soldering should not be done more than two times.
- 3.3 When soldering, do not put stress on the LEDs during heating.
- 3.4 After soldering, do not warp the circuit board.

#### 4. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 350°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

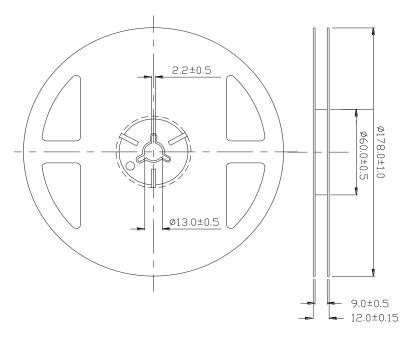

#### 5.Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
