GD32307C-EVAL
User Manual

Table of Contents

List of Tables

1 Summary

GD32307C-EVAL uses GD32F307VCT6 as the main controller. It uses Mini USB interface or DC-005 connector to supply 5V power. SWD, Reset, Boot, User button key, LED, CAN, I2C, I2S, USART, RTC, LCD, SPI, ADC, DAC, EXMC, CTC, USB, GD-Link and Extension Pins are also included. For more details please refer to GD32307C-EVAL-V1.0 schematic.

2 Function Pin Assign

Table 1. Function pin assign

Function	Pin	Description
LED	PC0	LED2
	PC2	LED3
	PE0	LED4
	PE1	LED5
RESET		K1-Reset
KEY	PA0	K2-Wakeup
	PC13	K3-Tamper
	PB14	K4-User key
USART0	PA9	USART0_TX
	PA10	USART0_RX
USART1	PA2	USART1_TX
	PA3	USART1_RX
ADC	PC3	ADC012_IN13
DAC	PA4	DAC_OUT0
	PA5	DAC_OUT1
I2C	PB6	I2C0_SCL
	PB7	I2C0_SDA
SPI	PA5	SPI0_SCK
	PA6	SPI0_MISO
	PA7	SPI0_MOSI
	PE3	SPI0_CS
I2S	PA4	MSEL
	PA5	MCLK
	PA7	MDIN
	PB12	I2S_WS
	PB13	I2S_CK
	PB15	I2S_DIN
	PC6	I2S_MCK
CAN0	PD0	CAN0_RX

Function	Pin	Description
	PD1	CAN0_TX
CAN1	PB5	CAN1_RX
	PB6	CAN1_TX
NAND Flash	PD14	EXMC_D0
	PD15	EXMC_D1
	PD0	EXMC_D2
	PD1	EXMC_D3
	PE7	EXMC_D4
	PE8	EXMC_D5
	PE9	EXMC_D6
	PE10	EXMC_D7
	PD11	EXMC_A16
	PD12	EXMC_A17
	PD4	EXMC_NOE
	PD5	EXMC_NWE
	PD6	EXMC_NWAIT
	PD7	EXMC_NCE1
LCD	PD14	EXMC_D0
	PD15	EXMC_D1
	PD0	EXMC_D2
	PD1	EXMC_D3
	PE7	EXMC_D4
	PE8	EXMC_D5
	PE9	EXMC_D6
	PE10	EXMC_D7
	PE11	EXMC_D8
	PE12	EXMC_D9
	PE13	EXMC_D10
	PE14	EXMC_D11
	PE15	EXMC_D12
	PD8	EXMC_D13
	PD9	EXMC_D14
	PD10	EXMC_D15
	PE2	EXMC_A23
	PD4	EXMC_NOE
	PD5	EXMC_NWE
	PD7	EXMC_NE0
Ethernet	PA1	ETH_RMII_REF_CLK
	PA2	ETH_MDIO
	PA7	ETH_RMII_CRS_DV
	PB11	ETH_RMII_TX_EN

Function	Pin	Description
	PB12	ETH_RMII_TXD0
	PB13	ETH_RMII_TXD1
	PC1	ETH_MDC
	PC4	ETH_RMII_RXD0
	PC5	ETH_RMII_RXD1
	PA8	ETH_RMII_REF_CLK
USBFS	PA9	USB_VBUS
	PA11	USB_DM
	PA12	USB_DP

3 Getting started

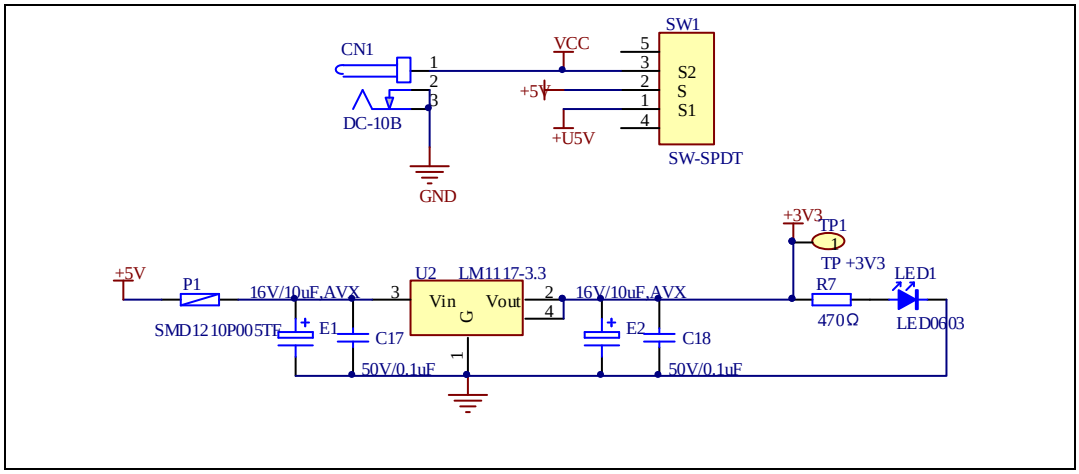
The EVAL board uses Mini USB connecter or DC-005 connector to get power DC +5V, which is the hardware system normal work voltage. A J-Link tool or GD-Link on board is necessary in order to download and debug programs. Select the correct boot mode and then power on, the LED1 will turn on, which indicates that the power supply is OK.

There are Keil version and IAR version of all projects. Keil version of the projects are created based on Keil MDK-ARM 4.74 uVision4. IAR version of the projects are created based on IAR Embedded Workbench for ARM 7.40.2. During use, the following points should be noted:

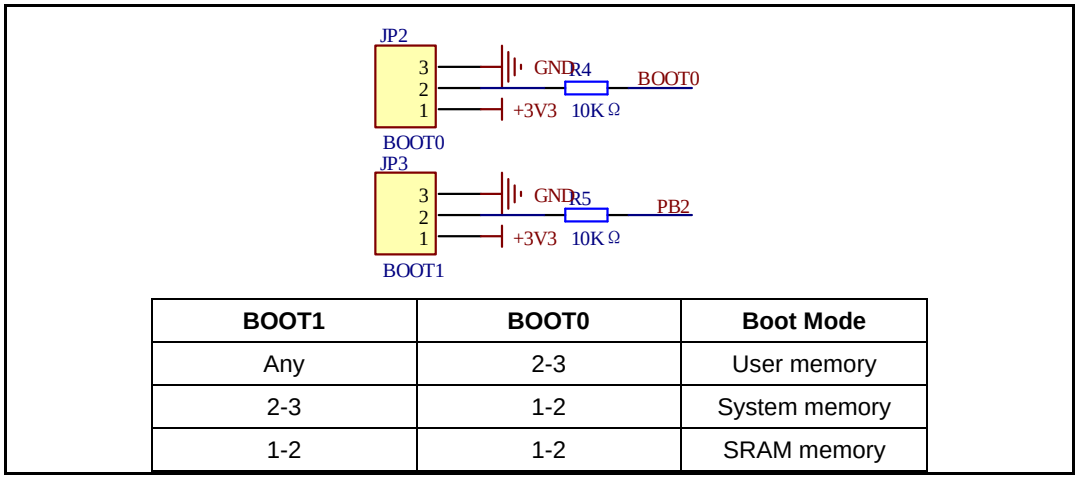
1. If you use Keil uVision4 to open the project, install the GD32F30x_AddOn.1.0.0.exe to load the associated files.
2. If you use Keil uVision5 to open the project, there are two ways to solve the "Device Missing (s)" problem. One is to install GigaDevice.GD32F30x_DFP.1.0.1.pack. In Project menu, select the Manage sub menu, click on the “Version Migrate 5 Format...” menu, the Keil uVision4 project will be converted to Keil uVision5 project. Then add “C:\Keil_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include” to C/C++ in Option for Target. The other is to install Addon directly. Select the installation directory of Keil uVision5 software, such as C:\Keil_v5, in Destination Folder of Folder Selection. Select the corresponding device in Device of Option for Target and add “C:\Keil_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include” to C/C++ in Option for Target.
3. If you use IAR to open the project, install IAR_GD32F30x_ADDON.1.0.1.exe to load the associated files.

4 Hardware layout overview

4.1 Power



4.2 Boot



BOOT1	BOOT0	Boot Mode

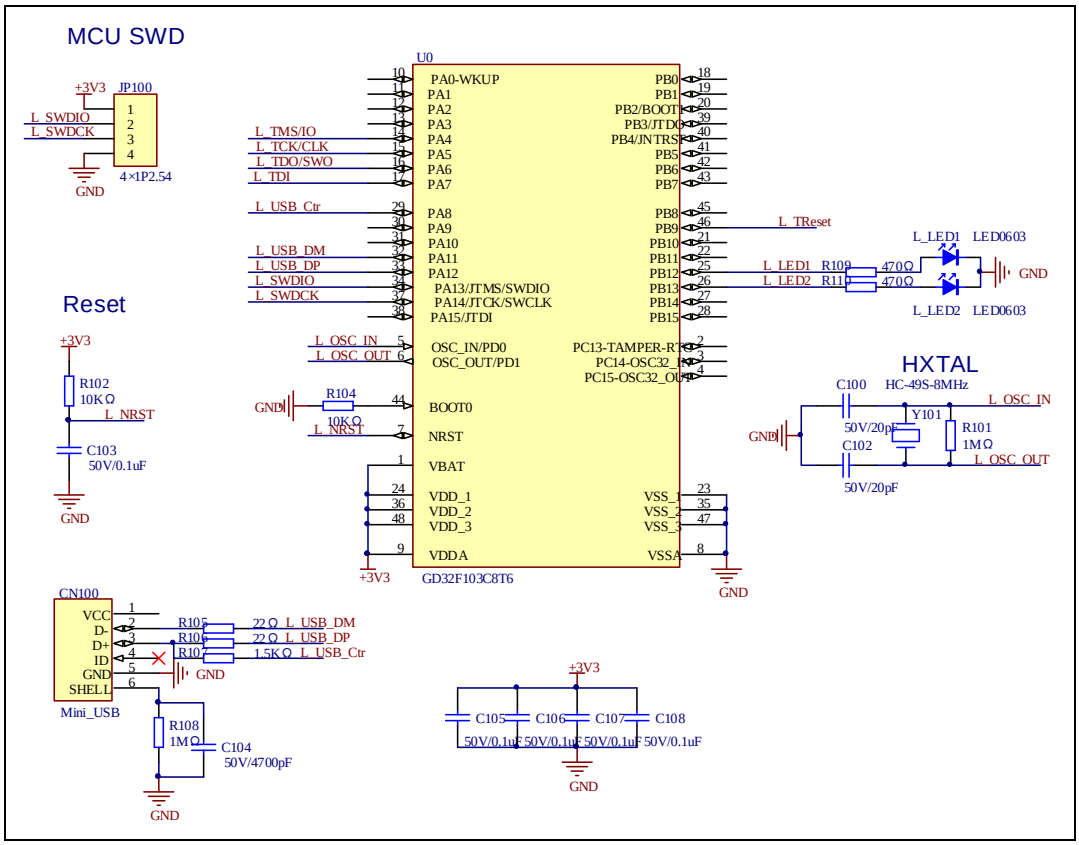
4.17 GD-Link



5 Routine use guide

5.1 GPIO_Runing_Led

5.1.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to use SysTick to generate 1ms delay

GD32307C-EVAL board has four LEDs. The LED2, LED3, LED4 and LED5 are controlled by GPIO. This demo will show how to light the LEDs.

5.1.2 DEMO Running Result

Download the program <01_GPIO_Runing_Led> to the EVAL board, LED2, LED3, LED4

will turn on in sequence with interval of 200ms, and turn off together, 200ms later, repeat the process.

5.2 GPIO_Keyboard_Polling_mode

5.2.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY
- Learn to use SysTick to generate 1ms delay

GD32307C-EVAL board has four keys and four LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED2, LED3, LED4 and LED5 are controlled by GPIO.

This demo will show how to use the Tamper key to control the LED2. When press down the Tamper Key, it will check the input value of the IO port. If the value is 0 and will wait for 50ms. Check the input value of the IO port again. If the value still is 0, it indicates that the button is pressed successfully and toggle LED2.

5.2.2 DEMO Running Result

Download the program <02_GPIO_KeyBoard_Polling_mode> to the EVAL board, press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

5.3 GPIO_KeyBoard_Interrupt_mode

5.3.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY
- Learn to use EXTI to generate external interrupt

GD32307C-EVAL board has four keys and four LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED2, LED3, LED4 and LED5 are controlled by GPIO.

This demo will show how to use the EXTI interrupt line to control the LED2.When press down the Tamper Key, it will produce an interrupt. In the interrupt service function, the demo will toggle LED2.

5.3.2 DEMO Running Result

Download the program <03_GPIO_KeyBoard_Interrupt_mode> to the EVAL board, press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

5.4 USART_Printf

5.4.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to retarget the C library printf function to the USART

5.4.2 DEMO Running Result

Download the program < 04_USART_Printf > to the EVAL board, connect serial cable to EVAL_COM1 and jump JP5 to USART. This implementation outputs “USART printf example: please press the Tamper key” on the HyperTerminal using EVAL_COM1. Press the Tamper key, serial port will output “USART printf example”.
The output information via the serial port is as following.

```
USART printf example: please press the Tamper key
USART printf example
```

5.5 USART_Echo_Interrupt_mode

5.5.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USART transmit and receive interrupts to communicate with the serial terminal tool

5.5.2 DEMO Running Result

Download the program < 05_USART_Echo_Interrupt_mode > to the EVAL board, connect serial cable to EVAL_COM1 and jump JP5 to USART. Firstly, all the LEDs are

turned on and off for test. Then, the EVAL_COM1 sends the tx_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of BUFFER_SIZE bytes from the serial terminal. The data MCU has received is stored in the rx_buffer array. After that, compare tx_buffer with rx_buffer. If tx_buffer is same with rx_buffer, LED2, LED3, LED4, LED5 flash by turns. Otherwise, LED2, LED3, LED4, LED5 toggle together.

The output information via the serial port is as following.

```
00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D 0E 0F 10 11 12 13 14 15 16 17 18 19 1A 1B

5.6 USART_DMA

5.6.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USART transmit and receive data using DMA

5.6.2 DEMO Running Result

Download the program < 06_USART_DMA > to the EVAL board, connect serial cable to EVAL_COM1 and jump JP5 to USART. Firstly, all the LEDs are turned on and off for test. Then, the EVAL_COM1 sends the tx_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of same bytes as tx_buffer from the serial terminal. The data MCU have received is stored in the rx_buffer array. After that, compare tx_buffer with rx_buffer. If tx_buffer is same with rx_buffer, LED2, LED3, LED4, LED5 flash by turns. Otherwise, LED2, LED3, LED4, LED5 toggle together.

5.7 ADC_Temperature_Vrefint

5.7.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to get the value of inner channel 16(temperature sensor channel) and channel 17 (VREFINT channel)

5.7.2 DEMO Running Result

Download the program <07_ADC_Temperature_Vrefint> to the GD32307C-EVAL-V1.0 board. Connect serial cable to EVAL_COM1, open the HyperTerminal.

When the program is running, HyperTerminal display the value of temperature and internal voltage reference (V_{REFINT}).

Notice: because there is an offset, when inner temperature sensor is used to detect accurate temperature, an external temperature sensor part should be used to calibrate the offset error.

```
the temperature data is 29 degrees Celsius
the reference voltage data is 1.200V

the temperature data is 30 degrees Celsius
the reference voltage data is 1.203V

the temperature data is 29 degrees Celsius
the reference voltage data is 1.201V

the temperature data is 29 degrees Celsius
the reference voltage data is 1.202V

the temperature data is 29 degrees Celsius
the reference voltage data is 1.202V

the temperature data is 29 degrees Celsius
the reference voltage data is 1.202V
```

5.8 ADC0_ADC1_Follow_up_mode

5.8.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 follow-up mode

5.8.2 DEMO Running Result

Download the program <08_ADC0_ADC1_Follow_up_mode> to the GD32307C-EVAL-V1.0 board. Connect serial cable to EVAL_COM1, open the HyperTerminal. PC3 and PC5 pin voltage access by external voltage.

TIMER0_CH0 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER0_CH0 coming, ADC0 starts immediately and ADC1 starts after a delay of several ADC clock cycles. The values of ADC0 and ADC1 are transmitted to array adc_value[0] and adc_value[1] by DMA.

When the first rising edge of TIMER0_CH0 coming, the value of the ADC0 conversion of PC3 pin is stored into the low half word of adc_value[0], and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC5 pin is stored into the high half word of adc_value[0]. When the second rising edge of TIMER0_CH0 coming, the value of the ADC0 conversion of PC5 pin is stored into the low half word of adc_value[1], and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC3 pin is stored into the high half word of adc_value[1].

When the program is running, HyperTerminal display the regular value of ADC0 and ADC1 by adc_value[0] and adc_value[1].

```
the data adc_value[0] is 00040711
the data adc_value[1] is 070C0009

the data adc_value[0] is 00000713
the data adc_value[1] is 070A0000

the data adc_value[0] is 00060713
the data adc_value[1] is 070A0000

the data adc_value[0] is 00030715
the data adc_value[1] is 070C0000

the data adc_value[0] is 00030710
the data adc_value[1] is 070D0000

the data adc_value[0] is 00000711
the data adc_value[1] is 070C0006
```

5.9 ADC0_ADC1_Regular_Parallel_mode

5.9.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 regular parallel mode

5.9.2 DEMO Running Result

Download the program <09_ADC0_ADC1_Regular_Parallel_mode> to the GD32307C-EVAL-V1.0 board. Connect serial cable to EVAL_COM1, open the HyperTerminal. PC3 and PC5 pin connect to external voltage input.

TIMER0_CH0 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER0_CH0 coming, ADC0 and ADC1 convert the regular channel group parallelly. The values of ADC0 and ADC1 are transmitted to array adc_value[0] and adc_value[1] by DMA.

When the first rising edge of TIMER0_CH0 coming, the value of the ADC0 conversion of PC3 pin is stored into the low half word of adc_value[0], the value of the ADC1 conversion of PC5 pin is stored into the high half word of adc_value[0]. When the second rising edge of TIMER0_CH0 coming, the value of the ADC0 conversion of PC5 pin is stored into the low half word of adc_value[1], the value of the ADC1 conversion of PC3 pin is stored into the high half word of adc_value[1].

When the program is running, HyperTerminal displays the regular value of ADC0 and ADC1 stored in adc_value[0] and adc_value[1].

```
the data adc_value[0] is 00000714
the data adc_value[1] is 07140000

the data adc_value[0] is 00050714
the data adc_value[1] is 07160000

the data adc_value[0] is 00040711
the data adc_value[1] is 07130000

the data adc_value[0] is 00000715
the data adc_value[1] is 07130001

the data adc_value[0] is 00000715
the data adc_value[1] is 07130002

the data adc_value[0] is 00060713
the data adc_value[1] is 07130000
```

5.10 DAC_Output_Voltage_Value

5.10.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use DAC to output voltage on DAC0 output

5.10.2 DEMO Running Result

Download the program <10_DAC_Output_Voltage_Value> to the EVAL board and run, all the LEDs will turn on and turn off for test. The digital value is 0x7FF0, its converted

analog voltage should be 1.65V (VREF/2), using the voltmeter to measure PA4 or DA1 on JP7, its value is 1.65V.

5.11 I2C_EEPROM

5.11.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the master transmitting mode of I2C module
- Learn to use the master receiving mode of I2C module
- Learn to read and write the EEPROM with I2C interface

5.11.2 DEMO Running Result

Download the program <11_I2C_EEPROM> to the EVAL board and run. Connect serial cable to COM1, jump the P4 I2C and jump JP5 to USART, then open the HyperTerminal to show the print message.

Firstly, the data of 256 bytes will be written to the EEPROM from the address 0x00 and printed by the serial port. Then, reading the EEPROM from address 0x00 for 256 bytes and the result will be printed. Finally, compare the data that were written to the EEPROM and the data that were read from the EEPROM. If they are the same, the serial port will output "I2C-AT24C02 test passed!" and the four LEDs lights flashing, otherwise the serial port will output "Err: data read and write aren't matching." and all the four LEDs light.

The output information via the serial port is as following.

```
I2C-24C02 configured....
The I2C0 is hardware interface
The speed is 400000
AT24C02 writing...
0x00 0x01 0x02 0x03 0x04 0x05 0x06 0x07 0x08 0x09 0x0A 0x0B 0x0C 0x0D 0x0E 0x0F

I2C-AT24C02 test passed!
```

5.12 SPI_SPI_Flash

5.12.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the master mode of SPI unit to read and write NOR Flash with the SPI interface

5.12.2 DEMO Running Result

The computer serial port line connected to the COM1 port of development board, set the baud rate of HyperTerminal software to 115200, 8 bits data bit, 1 bit stop bit. At the same time, you should jump the JP12 and JP13 to SPI, jump JP5 to USART.

Download the program <12_SPI_SPI_Flash> to the EVAL board, the HyperTerminal software can observe the operation condition and will display the ID of the flash, 256 bytes data which are written to and read from flash. Compare the data that were written to the flash and the data that were read from the flash. If they are the same, the serial port will output “SPI-GD25Q16 Test Passed!”, otherwise, the serial port will output “Err: Data Read and Write aren't Matching.”. At last, turn on and off the LEDs one by one. The following is the experimental results.

```

SPI-GD25Q16 Test Passed!
```

5.13 I2S_Audio_Player

5.13.1 DEMO Purpose

This Demo includes the following functions of GD32 MCU:

- Learn to use I2S module to output audio file
- Parsing audio files of wav format

GD32307C-EVAL board integrates the I2S (Inter-IC Sound) module, and the module can communicate with external devices using the I2S audio protocol. This Demo mainly shows how to use the I2S interface of the board for audio output.

5.13.2 DEMO Running Result

Jump JP18 and JP19 to I2S, download the program <13_I2S_Audio_Player> to the EVAL

board, insert the headphone into the audio port, and then listen to the audio file.

5.14 EXMC_NandFlash

5.14.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use EXMC control the NAND flash

5.14.2 DEMO Running Result

GD32307C-EVAL board has EXMC module to control NAND flash. Before running the demo, P2 and P3 must be fitted to the EXMC port, JP24 must be fitted to the Nand port. Download the program <14_EXMC_NandFlash> to the EVAL board. This demo shows the write and read operation process of NAND flash memory by EXMC module. If the test pass, LED2 will be turned on. Otherwise, turn on the LED4. Information via a HyperTerminal output as following:

```
NAND flash initialized!
Read NAND ID!
Nand flash ID:0xAD 0xF1 0x80 0x1D

Write data successfully!
Read data successfully!
Check the data!
Access NAND flash successfully!
The data to be read:
0x00 0x01 0x02 0x03 0x04 0x05 0x06 0x07 0x08 0x09 0x0A 0x0B 0x0C 0x0D 0x0E 0x0F
0x10 0x11 0x12 0x13 0x14 0x15 0x16 0x17 0x18 0x19 0x1A 0x1B 0x1C 0x1D 0x1E 0x1F

```

5.15 EXMC_TouchScreen

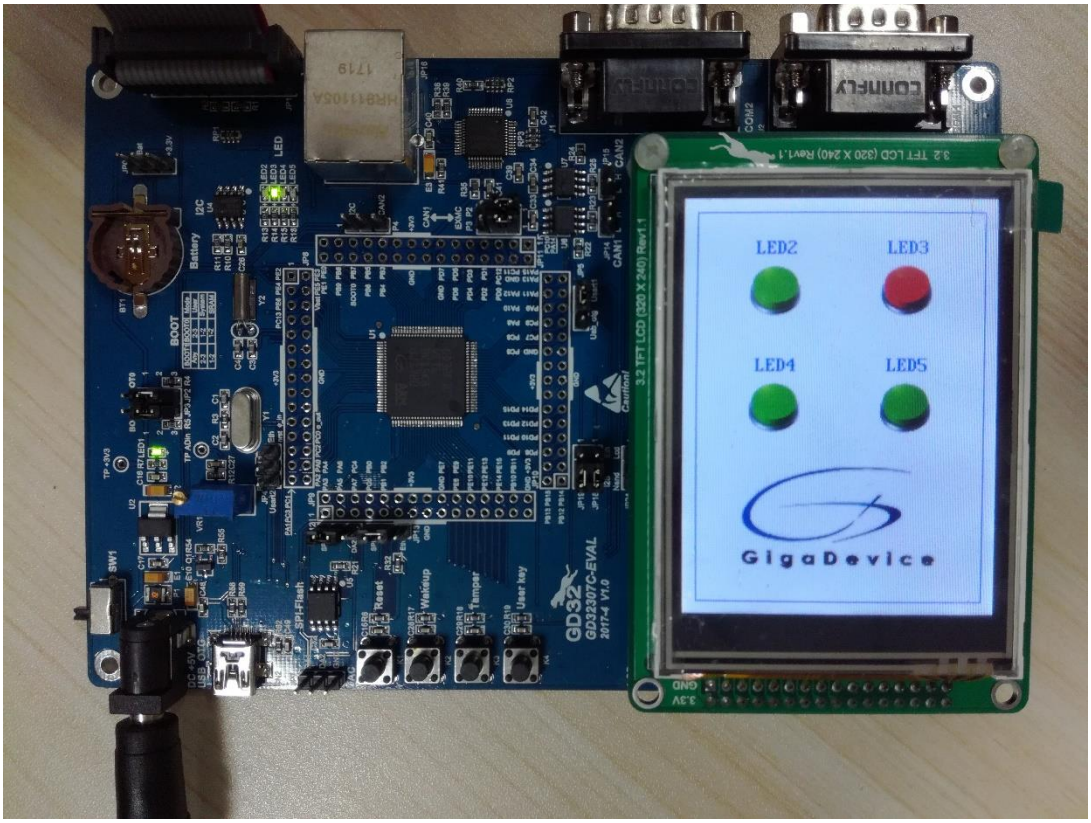
5.15.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use EXMC control LCD

5.15.2 DEMO Running Result

GD32307C-EVAL board has EXMC module to control LCD. Before running the demo, JP12, JP13 must be fitted to the SPI port, P2 and P3 must be fitted to the EXMC port, JP24 must be fitted to the Lcd port. Download the program <15_EXMC_TouchScreen> to the EVAL board. This demo displays GigaDevice logo and four green buttons on the LCD screen by EXMC module. Users can touch the green button to turn on the corresponding LED on board, and then the color of button you had touched will change to red.



5.16 CAN_Network

5.16.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

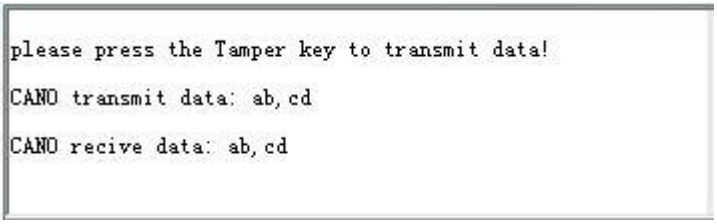
- Learn to use the CAN0 communication between two boards

GD32307C-EVAL development board integrates the CAN(Controller Area Network) bus controller, which is a common industrial control bus. CAN bus controller follows the CAN

bus protocol of 2.0 A and 2.0 B. This demo mainly shows how to communicate two EVAL boards through CAN.

5.16.2 DEMO Running Result

This example is tested with two GD32307C-EVAL boards. Jump the P2, P3 to CAN with the jumper cap. Connect L pin to L pin and H pin to H pin of JP14 on the boards for sending and receiving frames. Download the program <16_CAN_Network> to the two EVAL boards, and connect serial cable to EVAL_COM1. Firstly, the EVAL_COM1 sends “please press the Tamper key to transmit data!” to the HyperTerminal. The frames are sent and the transmit data are printed by pressing Tamper Key push button. When the frames are received, the receive data will be printed and the LED2 will toggle one time. The output information via the serial port is as following.



5.17 RCU_Clock_Out

5.17.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to use the clock output function of RCU
- Learn to communicate with PC by USART

5.17.2 DEMO Running Result

Download the program <17_RCU_Clock_Out> to the EVAL board and run. Connect serial cable to EVAL_COM1, open the HyperTerminal. When the program is running, HyperTerminal will display the initial information. Then user can choose the type of the output clock by pressing the TAMPER button. After pressing, the corresponding LED will be turned on and HyperTerminal will display which mode be selected. The frequency of the output clock can be observed through the oscilloscope by PA8 pin.
Information via a serial port output as following:

```
/=========== Gigadevice Clock output Demo ===========/
press tamper key to select clock output source
CK_OUT0: system clock
CK_OUT0: IRC8M
CK_OUT0: HXTAL
CK_OUT0: system clock
```

5.18 CTC_Calibration

5.18.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use external low speed crystal oscillator (LXTAL) to implement the CTC calibration function
- Learn to use clock trim controller (CTC) to trim internal 48MHz RC oscillator (IRC48M) clock

The CTC unit trim the frequency of the IRC48M based on an external accurate reference signal source. It can automatically adjust the trim value to provide a precise IRC48M clock.

5.18.2 DEMO Running Result

Download the program <18_CTC_Calibration> to the EVAL board and run. Firstly, all the LEDs flash once for test. Then if the clock trim is OK, LED2 will be on. Otherwise, all the LEDs are turned off.

5.19 PMU_sleep_wakeup

5.19.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USART receive interrupt to wake up the PMU from sleep mode

5.19.2 DEMO Running Result

Download the program < 19_PMU_sleep_wakeup > to the EVAL board, jump JP5 to USART and connect serial cable to EVAL_COM1. After power-on, all the LEDs are off. The MCU will enter sleep mode and the software stop running. When the USART0 receives a byte of data from the HyperTerminal, the MCU will wake up from a receive interrupt. And all the LEDs will flash together.

5.20 RTC_Calendar

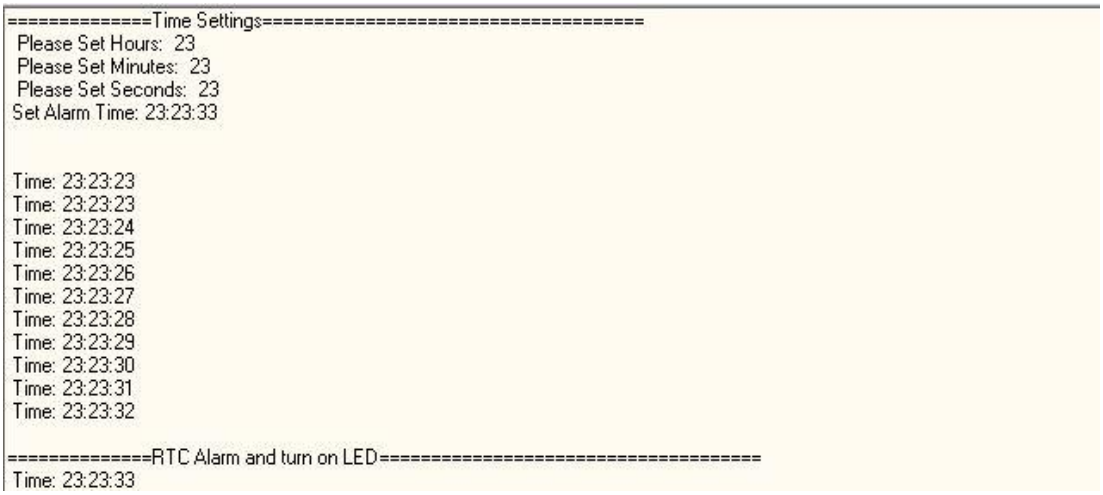
5.20.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use RTC module to implement calendar and alarm function
- Learn to use USART module to implement time display

5.20.2 DEMO Running Result

Download the program <20_RTC_Calendar> to the EVAL board and run. Connect serial cable to EVAL_COM1, open the HyperTerminal. After start-up, the program will ask to set the time on the HyperTerminal. The calendar will be displayed on the HyperTerminal. At the same time, set current time add 10 second as alarm time. After 10 second, the alarm note will be displayed on the HyperTerminal and turn on LEDs.



5.21 TIMER_Breath_LED

5.21.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Timer output PWM wave
- Learn to update channel value

5.21.2 DEMO Running Result

Use the DuPont line to connect the TIMER0_CH0 (PA8) and LED2 (PC0), and then download the program <21_TIMER_Breath_LED> to the GD32307C-EVAL board and run. PA8 should not be reused by other peripherals.
When the program is running, you can see LED2 lighting from dark to bright gradually and then gradually darken, ad infinitum, just like breathing as rhythm.

5.22 ENET

5.22.1 FreeRTOS_tcpudp

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Lwip stack
- Learn to use FreeRTOS operation system
- Learn to use netconn and socket API to handle with a task
- Learn how to realize a tcp server
- Learn how to realize a tcp client
- Learn how to realize a udp server/client
- Learn how to use DHCP to allocate ip address automatically

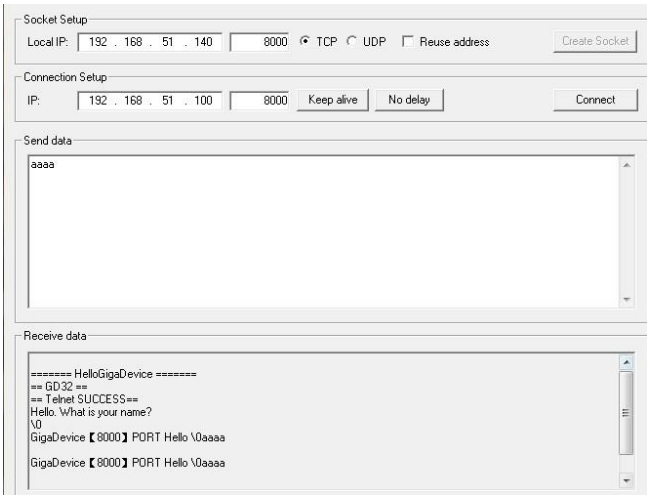
This demo is based on the GD32307C-EVAL-V1.0 board, it shows how to configure the enet peripherals to send and receive frames in normal mode and use lwip tcp/ip stack to realize ping, telnet and server/client functions.
JP4, JP13, JP18, JP19 must be fitted. JP5 jump to Usart.
It is configured in RMII mode, and 25MHz oscillator is used, the system clock is configured to 120MHz.
This demo realizes three applications:
1) Telnet application, the eval board acts as tcp server. Users can link the client with the eval board server, using 8000 port. Users can see the reply from the server, and can send the name(should input enter key) to server.
2) tcp client application, the eval board acts as tcp client. Users can link the eval board client with the server, using 1026 port. Users can send information from server to client, then the client will send back the information.
3) udp application. Users can link the eval board with another station, using 1025 port. Users can send information from station to board, then the board will send back the information.
If users need dhcp function, it can be configured from the private defines in main.h. This function is closed by default.

Note: Users should configure ip address, mask and gw of GD32307C-EVAL-V1.0 board or served according to the actual net situation from the private defines in main.h.

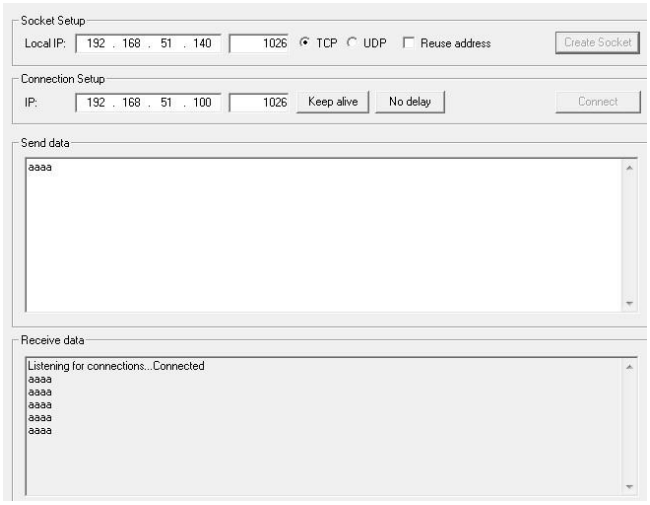
DEMO Running Result

Download the program <FreeRTOS_tcpudp> to the EVAL board, LED3 will light every 500ms.

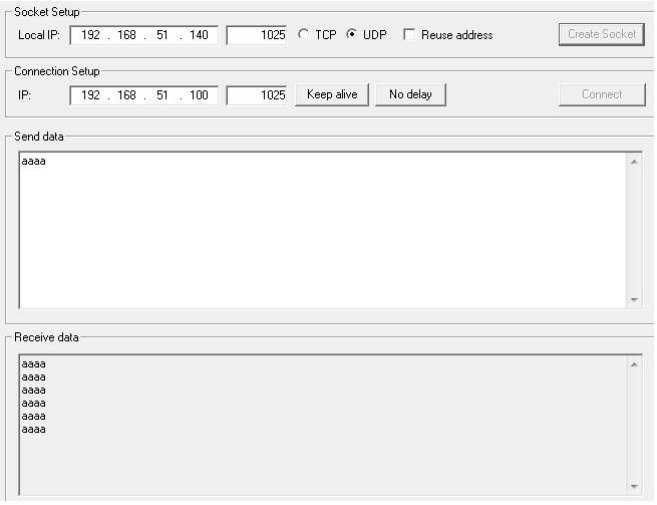
Using Network assistant software, configure the pc side to tcp client, using 8000 port, and when send something through the assistant, users can see the reply from the server:



Using Network assistant software, configure the pc side to tcp server, using 1026 port, and when send something through the assistant, users can see the echo reply from the client:



Using Network assistant software, configure to use udp protocol, using 1025 port, and when send something through the assistant, users can see the echo reply from the board:



Open the DHCP function in main.h, using a router to connect the board with the pc, users can see the automatic allocated ip address of the board from the HyperTerminal.

5.22.2 Raw_tcpudp

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Lwip stack
- Learn to use raw API to handle with a task
- Learn how to realize a tcp server
- Learn how to realize a tcp client
- Learn how to realize a udp server/client
- Learn how to use DHCP to allocate ip address automatically
- Learn to handle with received packet in polling mode and in interrupt mode

This demo is based on the GD32307C-EVAL-V1.0 board, it shows how to configure the enet peripherals to send and receive frames in normal mode and use lwip tcp/ip stack to realize ping, telnet and server/client functions.
JP4, JP13, JP18, JP19 must be fitted. JP5 jump to Usart.
It is configured in RMII mode, and 25MHz oscillator is used, the system clock is configured to 120MHz.
This demo realizes three applications:

1) Telnet application, the eval board acts as tcp server. Users can link the client with the eval board server, using 8000 port. Users can see the reply from the server, and can send the name(should input enter key) to server.

2) tcp client application, the eval board acts as tcp client. Users can link the eval board client with the server, using 1026 port. Users can send information from server to client, then the client will send back the information. If the server is not online at first,or is break during process, when the server is ready again, users can press tamper key to reconnect

with server, and communicate.

3) udp application. Users can link the eval board with another station, using 1025 port. Users can send information from station to board, then the board will send back the information.

By default, the packet reception is polled in while(1). If users want to receive packet in interrupt service, uncomment the macro defined USE_ENET_INTERRUPT in main.h.

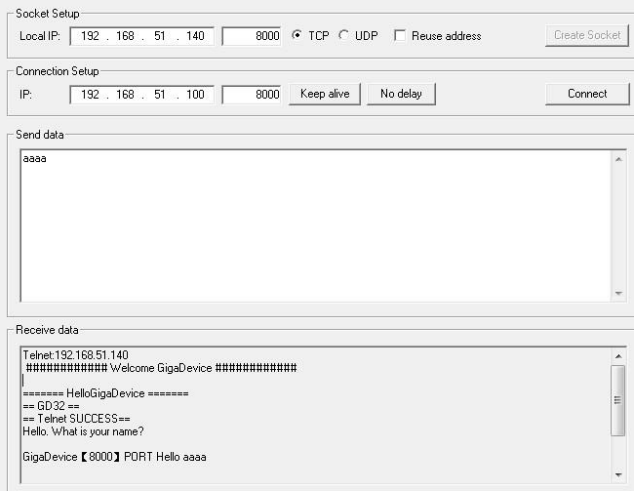
If users need dhcp function, it can be configured from the private defines in main.h. This function is closed in default.

Note: Users should configure ip address, mask and gw of GD32307C-EVAL-V1.0 board, or server according to the actual net situation from the private defines in main.h.

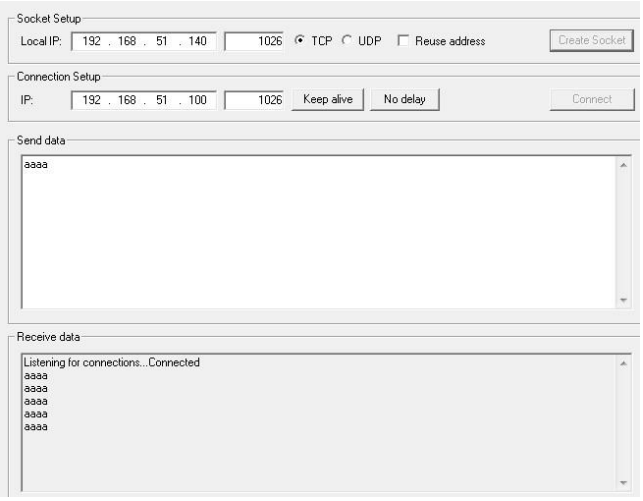
DEMO Running Result

Download the program <Raw_tcpudp> to the EVAL board.

Using Network assistant software, configure the pc side to tcp client, using 8000 port, and when send something through the assistant, users can see the reply from the server:

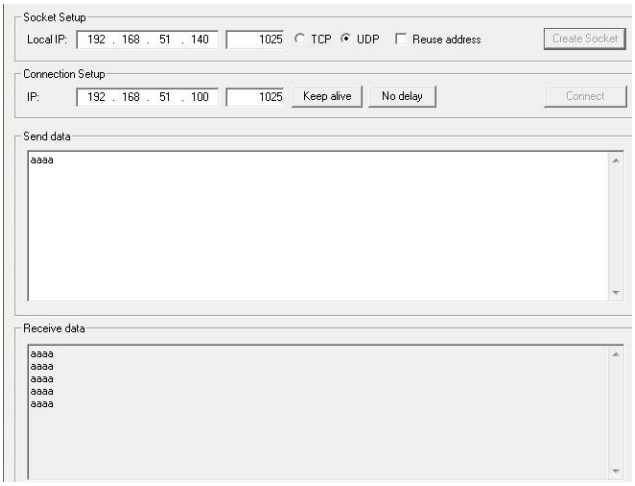


Using Network assistant software, configure the pc side to tcp server, using 1026 port, press the Tamper key, and when send something through the assistant, users can see the echo reply from the client:



Using Network assistant software, configure to use udp protocol, using 1025 port, and

when send something through the assistant, users can see the echo reply from the board:



Open the DHCP function in main.h, using a router to connect the board with the pc, users can see the automatic allocated ip address of the board from the HyperTerminal.

5.22.3 Raw_webserver

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Lwip stack
- Learn to use raw API to handle with a task
- Learn how to realize a web server
- Learn how to use a web server to control LEDs
- Learn how to use a web server to monitor the board V_{REFINT} voltage
- Learn how to use DHCP to allocate ip address automatically
- Learn to handle with received packet in polling mode and in interrupt mode

This demo is based on the GD32307C-EVAL-V1.0 board, it shows how to configure the enet peripherals to send and receive frames in normal mode and use lwip tcp/ip stack to realize webserver application.

JP4, JP13, JP18, JP19 must be fitted. JP5 jump to Usart.

It is configured in RMII mode, and 25MHz oscillator is used, the system clock is configured to 120MHz.

This demo realizes webserver application:

Users can visit the eval board through Internet Explorer, the eval board acts as a webserver, and the url is the local ip address of the eval board. There are two experiments realized, one is the LEDs control, the other one is the ADC monitoring V_{REFINT} voltage in real-time.

If users need dhcp function, it can be configured from the private defines in main.h. This function is closed by default. Users can use a router to connect the eval board, and use the COM port to print the automatic allocated ip address, then connect your mobile phone

to the wifi which the router send. Users can visit the eval board and control it on your mobile phone.

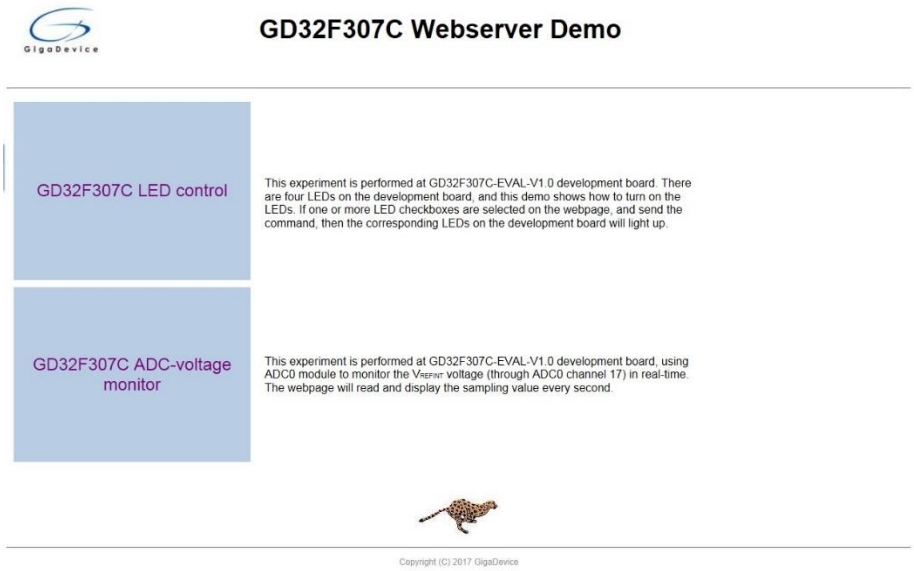
By default, the packet reception is polled in while(1). If users want to receive packet in interrupt service, uncomment the macro define USE_ENET_INTERRUPT in main.h.

Note: Users should configure ip address, mask and gw of GD32307C-EVAL-V1.0 board according to the actual net situation from the private defines in main.h.

DEMO Running Result

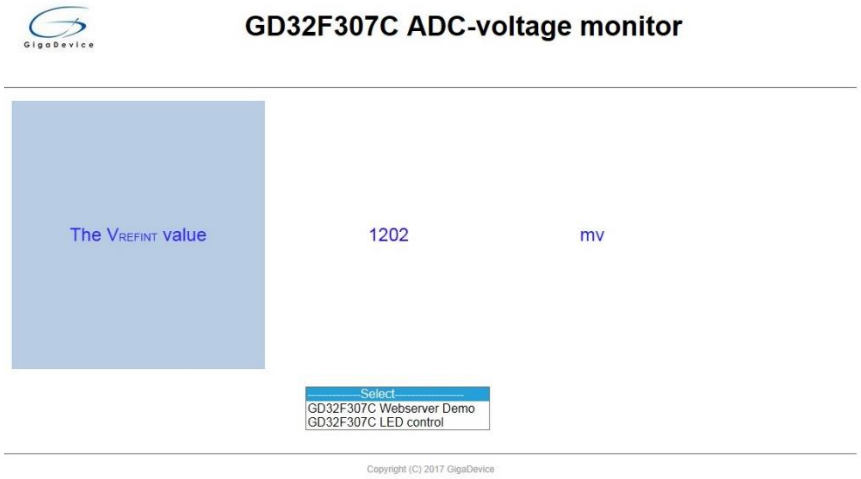
Download the program <Raw_webserver> to the EVAL board, using Internet Explorer software, enter in the ip address of the board, click on the LED control linker, choose the LED checkboxes users want to light, and “send”, the corresponding LEDs will light. Click on the ADC monitor linker, the real-time V_{REFINT} voltage is showed on the webpage, and the data refreshes every second automatically.

The web home page shows as below:



The LED control page shows as below:

The ADC monitor page shows as below:



Open the DHCP function in main.h, using a router to connect the board, and use the HyperTerminal to print the automatic allocated ip address, then connect your mobile phone to the wifi which the router send. Users can visit the eval board and control it on your mobile phone.

5.23 USB_Device

5.23.1 HID_Keyboard

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBFS peripheral mode
- Learn how to implement USB HID(human interface device)

GD32307C-EVAL-V1.0 board has four keys and one USB_FS interface. The four keys are Reset key, Wakeup key, Tamper key and User key. In this demo, the GD32307C-EVAL-V1.0 board is enumerated as an USB Keyboard, which uses the native PC Host HID driver, as shown below. The USB Keyboard uses three keys(wakeup key, tamper key and user key) to output three characters (‘b’, ‘a’ and ‘c’). In addition, the demo also supports remote wakeup which is the ability of a USB device to bring a suspended bus back to the active condition, and the wakeup key is used as the remote wakeup source.

DEMO Running Result

Before running the demo, please ensure that jumper JP5 jump to OTG. After doing this, download the program < 23_USBFS\USB_Device\HID_Keyboard > to the EVAL board and run. If you press the Wakeup key, will output 'b'. If you press the User key, will output 'c'. If you press the Tamper key, will output 'a'.

If you want to test USB remote wakeup function, you can do as follows:

- Manually switch PC to standby mode
- Wait for PC to fully enter the standby mode
- Push the Wakeup key
- If PC is ON, remote wakeup is OK, else failed.

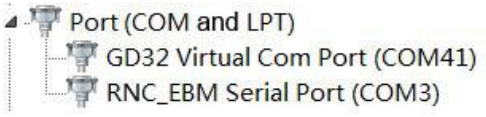
5.23.2 CDC_ACM

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBFS peripheral
- Learn how to implement USBFS CDC device

GD32307C-EVAL-V1.0 board has one USBFS interface. In this demo, the GD32307C-EVAL-V1.0 board is enumerated as an USB virtual COM port, which was shown in device manager of PC as below. This demo makes the USB device look like a serial port, and loops back the contents of a text file over USB port. To run the demo, input a message using the PC's keyboard. Any data that shows in HyperTerminal is received from the device.



DEMO Running Result

Download the program < 23_USBFS\USB_Device\CDC_ACM > to the EVAL board and run. When you input message through computer keyboard, the HyperTerminal will receive and shown the message. For example, when input "GigaDevice MCU", the HyperTerminal will get and show it as below.

5.24 USB_Host

5.24.1 HID_Host

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USBFS as a HID host
- Learn the operation between the HID host and the mouse device
- Learn the operation between the HID host and the keyboard device

GD32307C-EVAL-V1.0 board integrates the USBFS module, and the module can be used as a USB device, a USB host or an OTG device. This demo mainly shows how to use the USBFS as a USB HID host to communicate with external USB HID device.

DEMO Running Result

Jump the JP5 to OTG. Then download the program <23_USBFS\USB_Host\HID_Host> to the EVAL board and run.

If a mouse has been attached, the user will see the information of mouse enumeration. First pressing the user key will see the inserted device is mouse, and then moving the mouse will show the position of mouse and the state of button in the screen.

If a keyboard has been attached, the user will see the information of keyboard enumeration. First pressing the user key1 will see the inserted device is keyboard, and then pressing the keyboard will show the state of the button in the screen.

5.24.2 MSC_Host

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USBFS as a MSC host
- Learn the operation between the MSC host and the Udisk

GD32307C-EVAL-V1.0 board integrates the USBFS module, and the module can be used as a USB device, a USB host or an OTG device. This demo mainly shows how to use the USBFS as a USB MSC host to communicate with external Udisk.

DEMO Running Result

Jump the JP5 to OTG. Then insert the OTG cable to the USB port, download the program <23_USBFS\USB_Host\MSC_Host > to the EVAL board and run.
If an Udisk has been attached, the user will see the information of Udisk enumeration. First pressing the user key will see the Udisk information, next pressing the tamper key will see the root content of the Udisk, then press the wakeup key will write file to the Udisk, finally the user will see information that the msc host demo is end.
