

GLF71300 Nano-Current Consumed, I₀Smart<sup>™</sup> LoadSwitch with Slew Rate Control

**Product Brief** 

## DESCRIPTION

The GLF71300 is an ultra-efficiency, 2.0 A rated, Load Switch with integrated slew rate control. The best in class efficiency makes it an ideal choice for use in IoT, mobile, and wearable electronics.

The GLF71300 features an ultra-efficient  $I_QSmart^{TM}$  technology that supports the lowest quiescent current ( $I_Q$ ) and shutdown current ( $I_{SD}$ ) in the industry. Low  $I_Q$  and  $I_{SD}$  solutions help designers to reduce parasitic leakage current, improve system efficiency, and increase battery lifetime.

The GLF71300 integrated slew rate control can also enhance system reliability by mitigating bus voltage swings during switching events. Where uncontrolled switches can generate high inrush currents that result in voltage droop and/or bus reset events, the GLF slew rate control specifically limits inrush current during turn-on to minimize voltage droop.

The GLF71300 Load Switch device supports an industry leading wide input voltage range and helps to improve operating life and system robustness. Furthermore, one device can be used in multiple voltage rail applications which helps to simplify inventory management and reduces operating cost.

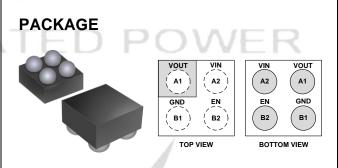

The GLF71300 Load Switch device is small utilizing a wafer level chip scale package with 4 bumps in a 0.77 mm x 0.77 mm x 0.46 mm die size and a 0.4 mm bump pitch.
