

## TL431A三端可调精密基准电路

### 概述 General Description

The TL431A is a three-terminal adjustable shunt regulator with guaranteed thermal stability over a full operation range. It features sharp turn-on characteristics, low temperature coefficient and low output impedance, which make it ideal substitute for Zener diode in applications such as switching power supply, charger and other adjustable regulators.

The output voltage of TL431A can be set to any value between  $V_{ref}$  (2.5V) and the corresponding maximum cathode voltage (40V). The TL431A is offered in two grade initial voltage tolerance at 25°C, 0.5% and 1.0%. This IC is available in 4 packages: SOP-8, TO-92 (bulk or ammo), SOT-23 and SOT-89.

## 绝对最大额定值 Absolute Maximum Rating (Note 1)

项目 Parameter	符号 Symbol	数值 Value	单位 Unit
阴极电压 Cathode Voltage	$V_{KA}$	36	V
阴极电流范围 Cathode Current Range	$I_{KA}$	-100 to 150	mA
参考输入电流范围 Reference Input Current Range	$I_{REF}$	10	mA
结温 Junction Temperature	$T_j$	150	°C
存储温度 Storage Temperature Range	$T_{STG}$	-65 to 150	°C
ESD(人体模型) ESD(Human Body Model)	ESD	3500	V

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent

damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

**备注 1：**超过“绝对最大额定值”的应力可能会造成器件永久损坏。这些仅是应力额定值，器件工作在上述条件以及超出“建议工作条件”的情况是不可取的。长期处于“绝对最大额定值”可能影响器件的可靠性。

## 环境温度下的额定功耗 Dissipation Rating - Free-air

### Temperature (Note 2)

Package	Ta=25°C Power Rating	Derating Factor Above Ta=25°C	Ta=70°C Power Rating	Ta=85°C Power Rating
TO-92	700mW	6.2mW/°C	491 mW	398 mW
SOT-89	500mW	4.0mW/°C	320 mW	260 mW
SOT-23	230mW	1.8mW/°C	149 mW	122 mW

**Note 2 :** The safe-work power dissipation of TL431A is under 0.25W while the package is TO-92 which is the ordinary transistor package. Above the power dissipation, the package should be changed to SO or DIP and the dissipation can be to 0.5W. The margin of power should be enough large because the reference voltage will falls as large power dissipation and high temperature rising. TL431A only is a reference voltage source. It is used to output a stable reference voltage, not large power.

**备注 2：**TL431A 的安全使用功率一般设计在 0.25W 以下 (TO-92 封装，也就是普通小三极管封装)，如果要较大的功率，你可以考虑一下 SO 封装或 DIP 封装的，这两种封装的功率设计为 0.5W 也很稳定。给 TL431A 留的功率余量较大，是考虑到 TL431A 在大功率，高温升的情况下稳压进度会下降。TL431A 只是一种基准电源，它的最大作用是提供稳定的基准电压，而不是输出大功率。
