Features

- 7-Channel High Current Sink Drivers
- Supports up to 20V Output Pull-up Voltage
- Low Output VOL of 0.6V (Typical) with
- 100mA (Typ.) Current Sink per Channel at 3.3V Logic Input
- 140mA (Typ.) Current Sink per Channel at 5.0V Logic Input
- Compatible to 3.3V and 5.0V Micro-Controllers and Logic Interface
- Internal Free-wheeling Diodes for Inductive Kick-back Protection
- Input Pull-down Resistors Allows Tri-Stating the Input Driver
- Input RC-Snubber to Eliminate Spurious Operation in Noisy Environments
- ESD: 4kV HBM, 1kV CDM
- Available in 16-Pin DIP, 16-Pin SOP and 16-Pin TSSOP packages

Description

The ULN2003LV are multi-channel sink drivers comprised of 7-channel output stages. The ULN2003LV sink driver features 7 low output impedance drivers that minimize on-chip power dissipation and an actual low power upgrade version for popular ULN2003A family in real applications. When driving a typical 12V relay coil, a ULN2003LV will dissipate 12 times lower power compared to ULN2003A.

The ULN2003LV both support 3.3V to 5V CMOS logic input interface, thus making it compatible to a wide range of micro-controllers and other logic interfaces, and also feature an improved input interface that minimizes the input DC current drawn from the external drivers. The input RC snubber circuit integrated at ULN2003LV improves the performance in noisy operating conditions, and the internal pull-down resistor at input stage helps allow input logic to be tri-stated.

As shown in the Functional Diagram, each output of the ULN2003LV features an internal free-wheeling diode connected in a common-cathode configuration at the COM pin which provides flexibility of increasing current sink capability through combining several adjacent channels in parallel. Under typical conditions the ULN2003LV can support up to 1.0A of load current when all 7- channels are connected in parallel.

Applications

- Inputs Compatible with Popular Logic Types
- Relay Driver Applications
- Stepping Motor Applications
- Logic Level Shifter

Notes:

4. Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only.
   Functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied.
   Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
5. All voltage values are with respect to the emitter/substrate terminal E, unless otherwise noted.
6. Maximum power dissipation is a function of TJ(max), θJA, and TA. The maximum allowable power dissipation at any allowable ambient temperature is PD = (TJ(max) – TA)/θJA. Operating at the absolute maximum TJ of +150°C can affect reliability.
7. Maximum power dissipation is a function of TJ(max), θJC, and TA. The maximum allowable power dissipation at any allowable ambient temperature is PD = (TJ(max) – TC)/θJA. Operating at the absolute maximum TJ of +150°C can affect reliability.
