## ORDERING INFORMATION

Device	Package
LM2904D	SOP-8
LM2904GD	
LM2904N	DIP-8

## DESCRIPTION

The LM2904 consists of two independent, high gain, internally frequency compensated operational amplifiers which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, DC gain blocks and all the conventional op amp circuits.
