

# TLS850B0TxVxx evaluation board

Z8F57876664

## Preface

### Scope and purpose

This application note provides information about the usage of the TLS850B0TxVxx evaluation board. The TLS850B0TxVxx evaluation board is used to demonstrate the ultra low quiescent current linear voltage regulator family TLS850B0 from Infineon Technologies AG. Please also refer to the corresponding data sheet - [DS](#).

### Intended audience

This document is intended for engineers who develop applications.

**Introduction**

## **1 Introduction**

This document describes the evaluation board for the TLS850B0 and its functionality. It includes a brief summary of the used passive components, as well as a short explanation for the correct usage of the board. The description of the TLS850B0 is not subject of this application note. Specifications and parameters for the device shall be taken from the corresponding data sheet.

### **1.1 General description**

The TLS850B0 is a linear voltage regulator which can be connected directly to the battery board net of a car. It is optimized for low drop and current consumption in off mode and thus also suitable for standby operation. Additionally it is capable to withstand high voltage transients such as a load dump scenario in a vehicle.

## Introduction

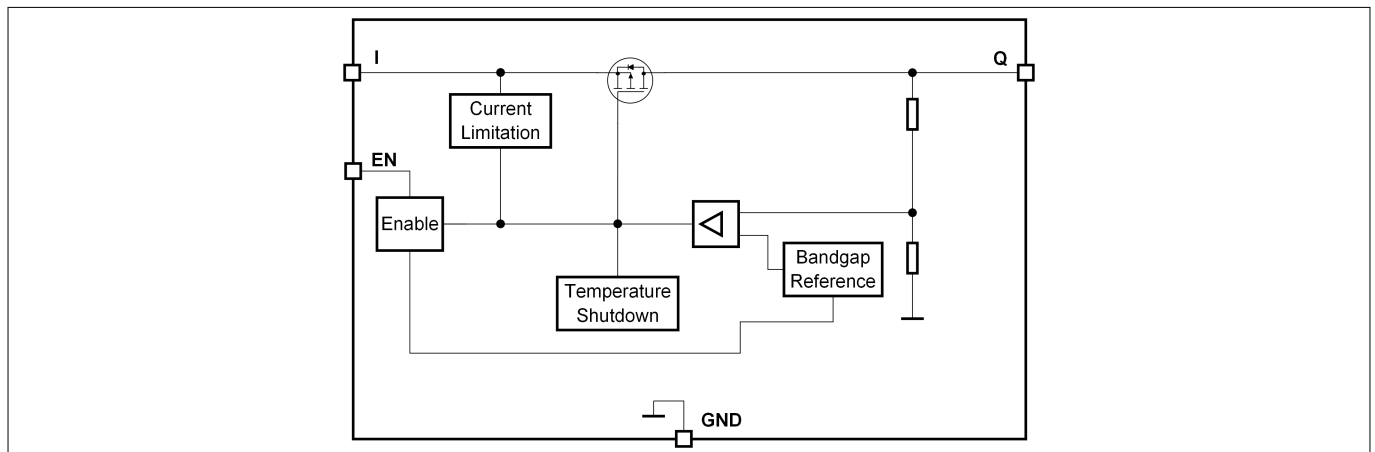

### 1.2 TLS850B0: Feature set

To meet the automotive standards, the TLS850B0 comes with a feature set, that includes:

- Output voltage accuracy at +/-2%
- Enable: reduces the current consumption to a minimum while the application is not used
- Protection functions:
  - Output current limitation
  - Overtemperature shutdown
- Robust against high input transients up to 45 V

### 1.3 Block diagram

Following the block diagram of TLS850B0 is illustrated. It shows the device's basic feature set. The parameters for each block shall be taken from the corresponding data sheet.

**Figure 1** TLS850B0 block diagram

Demoboard

## 2 Demoboard

The TLS850B0TxVxx evaluation board is available for the PG-TO263-5 and PG-TO252-5 package. Basic functions of the device can be evaluated with it, as well as identifying the proper configuration. Apart from that it may serve as help to assess the device's behavior outside of the application and under isolated conditions of stress. Figure *Figure 2* and *Figure 3* show the respective evaluation boards.

**Demoboard**

## 2.1 Operating conditions

To avoid electrical damage of the evaluation board, the operating range defined in [Table 1](#) must be followed.

**Table 1** Operating range<sup>1)</sup>

Parameter	Symbol	Limit values		Unit	Note
		Min.	Max.		
Board supply <sup>2)</sup>	V <sub>IN</sub>	0	45	V	Power supply
Regulator output	V <sub>OUT</sub>	0	7	V	Regulated output voltage
Enable input signal	EN	0	45 <sup>3)</sup>	V	Enable signal to switch on the regulator

## 2.2 Demoboard configuration

The TLS850B0TxVxx evaluation board enables the operator to use and test the basic function set of the TLS850B0. This includes the following features:

- Connecting the enable input signal to the supply voltage V<sub>IN</sub> via jumper JP1
- Delay the enable by adding an additional capacitor at EN (C5)
- Placeholder for additional output capacitor (C1)
- Several test points to conveniently attach probes to the respective signals

### 2.2.1 Enable function

The jumper JP1 can be used to connect the EN signal to the supply voltage V<sub>IN</sub> or pull it to GND. Furthermore an external enable signal can be applied by using the banana jack EN.

**Table 2** Jumper JP1 setting for enable function

JP1	Enable function
Pin 3 to pin 2	EN is connected to the supply voltage V <sub>IN</sub> ; the regulator is enabled while it is supplied
Pin 2 to pin 1	EN is pulled to GND
Open	EN is floating; An external enable signal can be applied via the banana jack EN

<sup>1</sup> The Demoboard operates at an ambient temperature of 25°C

<sup>2</sup> Functional input voltage range: 3 V to 40 V

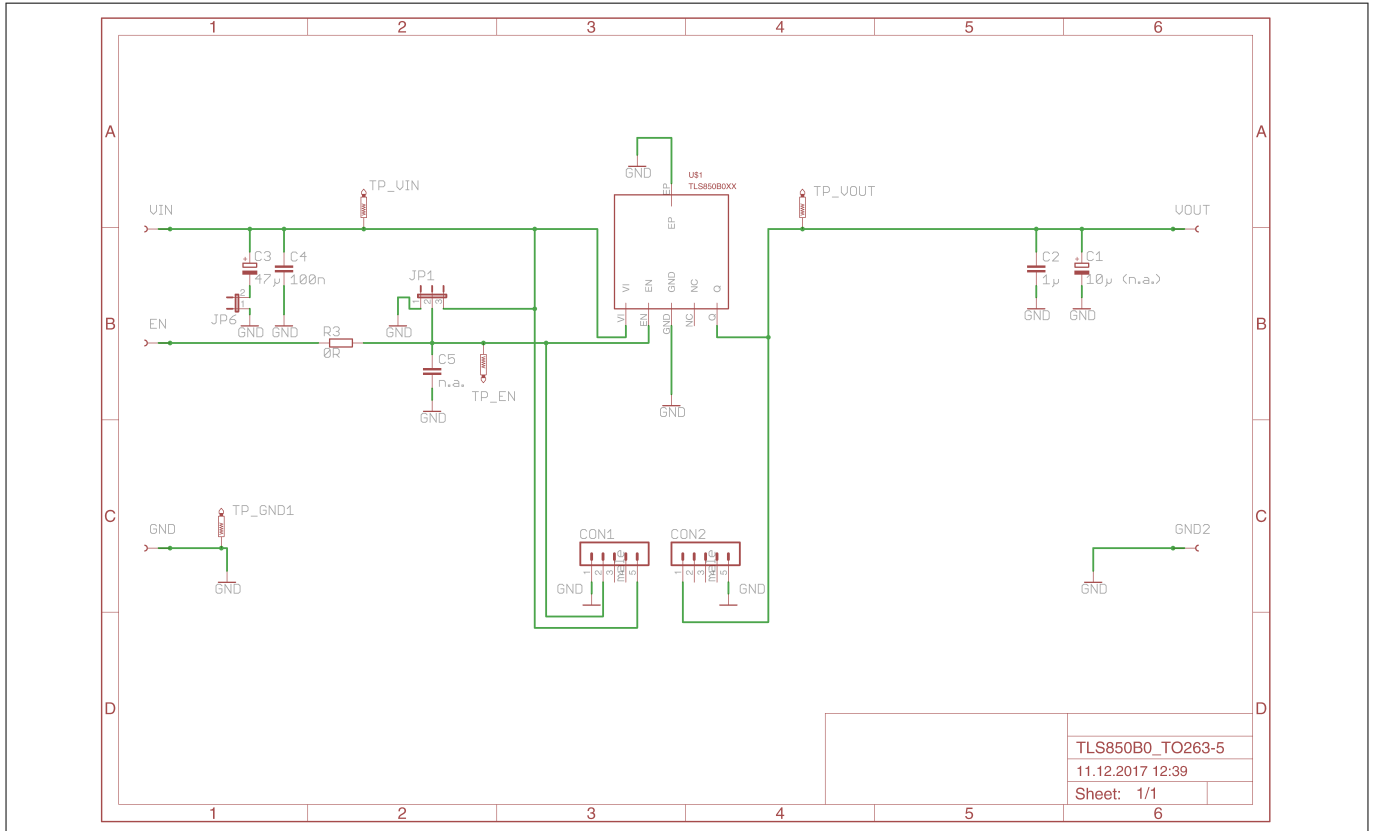

<sup>3</sup> Absolute maximum rating

**Schematic and layout**

**3 Schematic and layout**

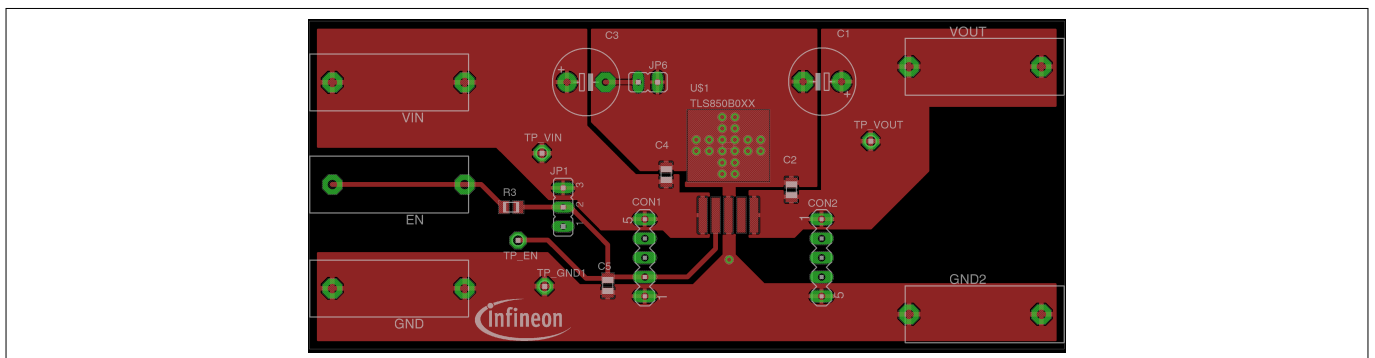

In the following the schematic and the layout of the board are illustrated. These figures can be used for a better understanding and tracing of the connections. In case of further questions, address to the AutomotivePowerSupplyIC\_Support@infineon.com.

**Restrictions**

## **5 Restrictions**

This evaluation board is offering limited features allowing you only to evaluate and test the Infineon products. The evaluation board is neither an end product, nor it is intended or authorized by Infineon to be used as a reference design. You are not authorized to use the evaluation board in any production.

For further information please refer to: [www.infineon.com](http://www.infineon.com).

## IMPORTANT NOTICE

The information contained in this application note is given as a hint for the implementation of the product only and shall in no event be regarded as a description or warranty of a certain functionality, condition or quality of the product. Before implementation of the product, the recipient of this application note must verify any function and other technical information given herein in the real application. Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind (including without limitation warranties of non-infringement of intellectual property rights of any third party) with respect to any and all information given in this application note.

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer's technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

## WARNINGS

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury
