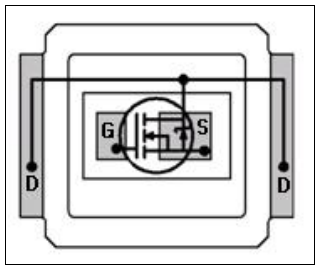
1 Description



OptiMOS™25V products are class leading power MOSFETs for highest power density and energy efficient solutions. Ultra low gate and output charges together with lowest on state resistance in small footprint packages make OptiMOS™ 25V the best choice for the demanding requirements of voltage regulator solutions in Servers, Datacom and Telecom applications. Super fast switching Control FETs together with low EMI Sync FETs provide solutions that are easy to design in. OptiMOS™ products are available in high performance packages to tackle your most challenging applications giving full flexibility in optimizing space, efficiency and cost. OptiMOS™ products are designed to meet and exceed the energy efficiency and power density requirements of the sharpened next generation voltage regulation standards in computing applications.

Features

- Optimized for high performance buck converters
- 100% avalanche tested
- Low parasitic inductance
- Qualified according to JEDEC[1)] for target applications
- Low profile (<0.7 mm)
- Pb-free plating; RoHS compliant
- Halogen-free according to IEC61249-2-21
- Double-sided cooling
- Compatible with DirectFET® package SQ footprint and outline
- 100% Rg Tested

Applications

- On board power for server
- Power managment for high performance computing
- Synchronous rectification
- High power density point of load converters
