Product description

This Infineon cost optimized RF PIN diode is designed for low distortion switches that require to hold off large RF voltages, and is best suited for frequencies as high as 3 GHz. Its nominal 50 µm I-region width, combined with the typical 1.55 µs carrier lifetime, result in a diode with low forward resistance and low distortion characteristics.

Feature list

- Low signal distortion, charge carrier lifetime $t_{rr} = 1.55 \mu s$ (typical)
- Very low capacitance $C = 0.25 \text{ pF}$ (typical) at voltage $V_R = 0$ and frequencies $f \geq 1 \text{ Ghz}$
- Low forward resistance $R_F = 2.2 \Omega$ (typical) at forward current $I_F = 10 \text{ mA}$ and frequency $f = 100 \text{ MHz}$
- Industry standard SOT323-3 package ($2.1 \text{ mm} \times 2 \text{ mm} \times 0.9 \text{ mm}$)
- Pb-free, RoHS compliant and halogen-free

Product validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22.

Potential applications

Optimized for low bias current RF and high-speed interface switches and attenuators

- Wireless communication
- High speed data networks

Device information

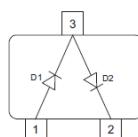

Table 1 Part information

| Product name / Ordering code | Package | Pin configuration | Marking | Pieces / Reel |
|--------------------------------|----------|-------------------|---------|---------------|
| BAR64-04W / BAR6404WH6327XTSA1 | SOT323-3 | Series pair | PPs | 3 k |

Attention: *ESD (Electrostatic discharge) sensitive device, observe handling precautions!*
