Notes: $^{1)}$ It is possible to overdrive $V_{\rm ref}$ with an external reference voltage between 1.5 - 2.8 V providing its ability to sink or source approximately 5 mA

- 2) Maximum supply voltage (not operating) <6.5 V
- 3) Excluding offset and Magnetic offset voltage
- ⁴⁾ Small signal only to avoid excessive heatings of the magnetic core.

Safety

This transducer must be used in limited-energy secondary circuits according to IEC 61010-1.

This transducer must be used in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating instructions.

Caution, risk of electrical shock

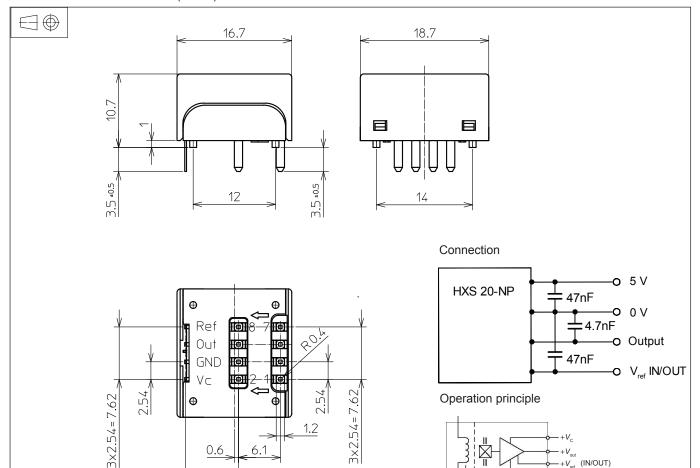

When operating the transducer, certain parts of the module can carry hazardous voltage (eg. primary busbar, power supply). Ignoring this warning can lead to injury and/or cause serious damage.

This transducer is a build-in device, whose conducting parts must be inaccessible after installation. A protective housing or additional shield could be used. Main supply must be able to be disconnected.
