

General Description

The LTA809x family (LTA8091, LTA8092, and LTA8094) is a new generation of high voltage (48 V), low noise, precision operational amplifiers. These devices offer outstanding dc precision and ac performance, including low offset, low offset drift, 22-MHz bandwidth, and 4 nV/ $\sqrt{\text{Hz}}$ input voltage noise density at 10 kHz. Unique features such as differential input-voltage range to the negative supply rail, high output current (± 45 mA), high capacitive load drive of up to 1 nF, and high slew rate (20 V/ μs) make the LTA809x high-performance operational amplifiers for high-voltage industrial and medical applications.

The robust design of the LTA809x family provides ease-of-use to the circuit designer: integrated RF/EMI rejection filter, no phase reversal in overdrive conditions, and high electro-static discharge (ESD) protection. The LTA809x are optimized for operation at voltages from +4.5 V (± 2.25 V) to +48 V (± 24 V) over the extended temperature range of -40°C to $+125^{\circ}\text{C}$.

The LTA8091 (single) is available in both SOT23-5L and SOIC-8L packages. The LTA8092 (dual) is offered in SOIC-8L and MSOP-8L packages. The quad-channel LTA8094 is offered in both SOIC-14L and TSSOP-14L packages.
