

**SP1001 Series - 8pF 15kV Unidirectional TVS Array**

**Description**

Avalanche breakdown diodes fabricated in a proprietary silicon avalanche technology protect each I/O pin to provide a high level of protection for electronic equipment that may experience destructive electrostatic discharges (ESD). These robust diodes can safely absorb repetitive ESD strikes above the maximum level specified in IEC 61000-4-2 international standard (Level 4, ±8kV contact discharge) without performance degradation. Their very low loading capacitance also makes them ideal for protecting high-speed signal pins.

**Pinout**

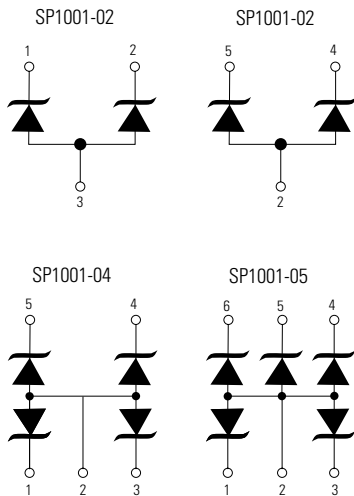

Note: \* AEC-Q101 Qualified

**Features**

- Low capacitance of 8pF (TYP) per I/O
- ESD protection of ±15kV contact discharge, ±30kV air discharge, (Level 4, IEC 61000-4-2)

### Capacitance vs. Reverse Bias

### Design Consideration

Because of the fast rise-time of the ESD transient, placement of ESD components is a key design consideration. To achieve optimal ESD suppression, the components should be placed on the circuit board as close to the source of the ESD transient as possible. Install the ESD suppressors directly behind the connector so that they are the first board-level circuit component encountered by the ESD transient. They are connected from signal/data line to ground.
