Bias Resistor Transistors NPN Silicon Surface Mount Transistors with Monolithic Bias Resistor Network

1. FEATURES

- Built-in bias resistors enable the configuration of an inverter circuit without connecting exeernal input resistors.
- The bias resistors consist of thin-film resistors with complete isolation to allow positive biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
- Only the on/off conditions need to be set for operation, making the device design easy.
- We declare that the material of product compliance with RoHS requirements and Halogen Free.
- S- prefix for automotive and other applications requiring unique site and control change requirements; AEC-Q101 qualified and PPAP capable.

2. Applications

• Inverter ,Interface, Driver.
