

# **LOW NOISE J-FET DUAL OPERATIONAL AMPLIFIERS**

**LR072**

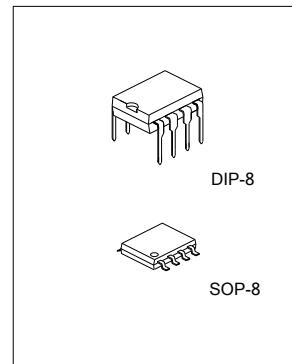

## **DESCRIPTION**

The LR072 is a high speed J-FET input dual operational amplifiers incorporating well matched, high voltage J-FET and bipolar transistors in a monolithic integrated circuit.

The device features high slew rates, low input bias and offset currents , and low offset voltage temperature coefficient.

## **FEATURES**

- \* Wide common-mode and differential voltage range
- \* Low input bias and offset current
- \* Low noise  $e_n=15\text{nv}/\sqrt{\text{Hz}}(\text{typ})$
- \* Output short-circuit protection
- \* High input impedance J-FET input stage
- \* Low harmonic distortion:0.01%(typ)
- \* Internal frequency compensation

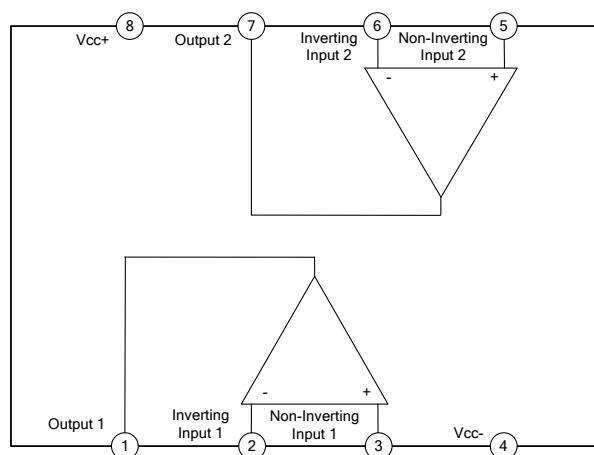

## **ORDERING INFORMATION**

| <b>Device</b> | <b>Package</b> |
|---------------|----------------|
| LR072D        | DIP-8-300-2.54 |
| LR072E        | SOP-8-225-1.27 |

\* Latch up free operation

\* High slew rate:16V/ $\mu\text{s}$ (typ)

## **BLOCK DIAGRAM**

**ABSOLUTE MAXIMUM RATINGS** ( $T_a=25^\circ C$ )

| <b>Characteristic</b>                | <b>Symbol</b> | <b>Value</b> | <b>Unit</b> |
|--------------------------------------|---------------|--------------|-------------|
| Supply Voltage-note1                 | Vcc           | $\pm 18$     | V           |
| Input Voltage-note2                  | Vi            | $\pm 15$     | V           |
| Differential Input Voltage –note3    | Vi(diff)      | $\pm 30$     | V           |
| Power Dissipation                    | Pd            | 680          | mW          |
| Output Short-Circuit Duration- note4 |               | Infinite     |             |
| Operating Free-air Temperature       | Topr          | 0 to $+70$   | $^\circ C$  |
| Storage Temperature Range            | Tstg          | -65 to 150   | $^\circ C$  |

1. All voltage values, except differential voltage ,are with respect to zero reference level (ground) of the supply voltages where the zero reference level is the midpoint between Vcc+ and Vcc-.
2. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15 volts, whichever is less .
3. Differential voltages are the non-inverting input terminal with respect to the inverting input interminal.
4. The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.

**ELECTRICAL CHARACTERISTICS**
 $(V_{cc}=\pm 15V, T_a=+25^\circ C, \text{unless otherwise specified})$ 

| <b>Characteristic</b>  | <b>Symbol</b> | <b>Test Condition</b>                                | <b>Min</b> | <b>Typ.</b> | <b>Max</b> | <b>Unit</b>      |
|--|---------------|--|------------|-------------|------------|------------------|
