Features:

- High Brightness Cool white LED with maximum output in excess of 1,800 lm
- Available in 5000K, 5700K and 6500K, 70 CRI (typical) color points
- Compact monolithic emitter ideal for directional lighting applications with high uniformity
- Binned at 85 °C
- Typical efficacy 170 lm/W at 700 mA
- Maximum drive current: 6 A DC
- High thermal conductivity package - junction thermal resistance of only 1.2° C/W
- Wide viewing angle: 120°
- 8000V HBM ESD rating per MIL STD-883D
- Electrically isolated thermal path
- RoHS and REACH compliant

Applications

- Flashlight
- Automotive accessory spotlights
- Portable lighting accessories
- Spot light
- Instrumentation
- Work light
- Battery and solar-powered applications
- Bicycle light

General Considerations

Environmental Considerations:

As a leading provider of solid-state Lighting solutions, Luminus implements strict substance control policies to ensure all of its products are environmentally friendly. As all Luminus LEDs, the SST-40-W series are compliant with the Restriction of Hazardous Substances Directive (RoHS) and REACH directives from the European Community.

Product Testing:

Every SST-40-W LED is fully production tested to ensure it meets the high quality standards customers have come to expect from Luminus products. Devices are binned to correlated values at 1500 mA, 20 msec pulse condition at $T_j = 85^\circ\text{C}$. Current and temperature curves are provided in this document allowing users to predict the LED performance and characteristics under their own driving and thermal conditions.

Reliability:

Luminus SST-40-W LED series are required to pass a rigorous suite of environmental and mechanical stress tests, including mechanical shock, vibration, temperature cycling and humidity. These tests ensure that the devices deliver high performance and achieve reliable long term operation in the automotive and other demanding environments. Please contact Luminus for further information.

Flux Binning Structure

SST-40-W LEDs are binned for luminous flux based on $I_f = 1500$ mA and 85 °C junction temperature (T_j) conditions.

Note 1: Luminus maintains a +/- 6% tolerance on flux measurement.

Note 2: Correlated flux values at 700mA, 2000 mA, 3000 mA, 5000 mA and 6000 mA are for reference only.

Forward Voltage Binning Structure

SST-40-W LEDs are binned for forward voltage based on $I_f = 1500$ mA and 85 °C junction temperature (T_j) conditions.

Precautions for Use

Storage:

1. The recommended storage condition is between 5 °C and 30 °C and relative humidity less than or equal to 60% RH in its original package.
2. After this bag is opened, devices that will be applied to infrared reflow, vapor - phase reflow, or equivalent soldering process must be:
 - a) Completed within 168 hours.
 - b) Stored at less than 60% relative humidity.
 - c) If not completely used within 168 hours, seal the remaining in the moisture barrier bag.
3. Devices require baking before mounting, if 2 a) is not met.
4. If baking is required, devices must be baked under below conditions:
24 hours at 60 C +/-5 °C

The LED's electrode and leadframe are a silver plated copper alloy. The silver surface may be affected by its environment. Please avoid conditions which may cause the LEDs to corrode or become discolored. The corrosion or discoloration might lower the solderability or affect the optical characteristics of the device.

Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

Static Electricity:

1. The products are sensitive to static electricity and care should be taken when handling them.
2. Static electricity or surge voltage will damage the LEDs. It is recommended to wear an anti-electrostatic wristband or anti-electrostatic gloves when handling the LEDs.
3. All devices, equipment and machinery must be properly grounded. It is recommended that measures be taken against surge voltage to the equipment that mounts the LEDs.

Vision Advisory

WARNING: Looking at an exposed LED during operation can result in eye injury. This LED products has been classified as Risk Group 2 for blue light hazard according to the IEC 62471.

History of Changes

Revision	Date	Description of Change
01	05/15/2017	Initial data sheet.
02	8/8/2018	- Change binning current to 1.5 A. Updated calculated values and characterization plots accordingly. - Added 5000K, 5700K. - Remove chromaticity bin codes "650" and flux bin "N2". - Editorial fixes across the document
03	03/24/2020	- Change reel label information.
04	03/26/2020	- Added flux bin.
