

## Omni-polar, Nano Power Hall-Effect Switch IC

### 1 Product Description

The MT863X family is produced with CMOS technology. The Hall IC internally includes high sensitivity horizontal hall plates, sleep/awake logics for mode control, a low-power on-chip oscillator, low noise analog signal chain with dynamic offset cancellation, hysteresis comparators and an output driver.

The product responds to either North pole or South pole magnetic fields. The output will be turned on (Low) when the magnetic flux density (B) is larger than the operating point (BOP), and be turned off (High) when the magnetic flux density (B) is lower than the releasing point (BRP).

The MT863X family provides a variety of packages to customers: SOT-23-3L for surface mount and flat TO-92 for through-hole mount. All packages are RoHS compliant.

### 2 Features

- CMOS Technology
- Omni-polar Switch
- 2.0~5.5V Operating Vcc Range
- -40°C~125°C Operating Temperature
- Package Option:
  - SOT-23-3L
  - Flat TO-92
- Magnetic Sensitivity Option:
  - MT8631 : BOP=±37Gs, BRP=±25Gs
  - MT8632 : BOP=±15Gs, BRP=±9Gs
- Push Pull Output
- Nano Power Consumption:
  - Average Supply Current =600nA (Vcc=2.0V)
- RoHS Compliant: (EU)2015/863

### 3 Product Overview of MT863X

| Part No. | Description                              |
|----------|--|
| MT863XA  | Flat TO-92, bulk packaging (1000pcs/bag) |
| MT863XAT | SOT-23-3L, tape & reel (3000pcs/bag)     |

### 4 Applications

- Home appliances, Industrial
- Position Detection
- Solid-State Switch
- Proximity Switch
- Smart Meter
- Handheld Device
- Consumer Device

### 5. Pin Configuration and Functions

|             | Vcc   | Out                 | GND    |
|-------------|-------|---------------------|--------|
| SOT-23-3L   | 1     | 2                   | 3      |
| Flat TO-92  | 1     | 3                   | 2      |
| Description | Power | Output<br>Push Pull | Ground |

## 6 Definition of Switching Function

Figure.2 shows the device functionality and hysteresis

Figure.2 Omni-polar Switching Function

## 7 Function Description

**B<sub>OP</sub>:** Operating Point, Magnetic flux density applied on the branded side of the package which turns the output driver ON ( $V_{OUT}=Low$ )

**B<sub>RP</sub>:** Releasing Point, Magnetic flux density applied on the branded side of the package which turns the output driver OFF ( $V_{OUT}=High$ )

**B<sub>HYST</sub>:** Hysteresis Window,  $|B_{OP} - B_{RP}|$

Devices that have a lower magnetic threshold ( $V_{OUT}=High$ ) detect magnets at a farther distance. Higher thresholds ( $V_{OUT}=Low$ ) generally require a closer distance or larger magnet.

## 8 Feature Description

The MT863X device is sensitive to the magnetic field component that is perpendicular to the top of the package

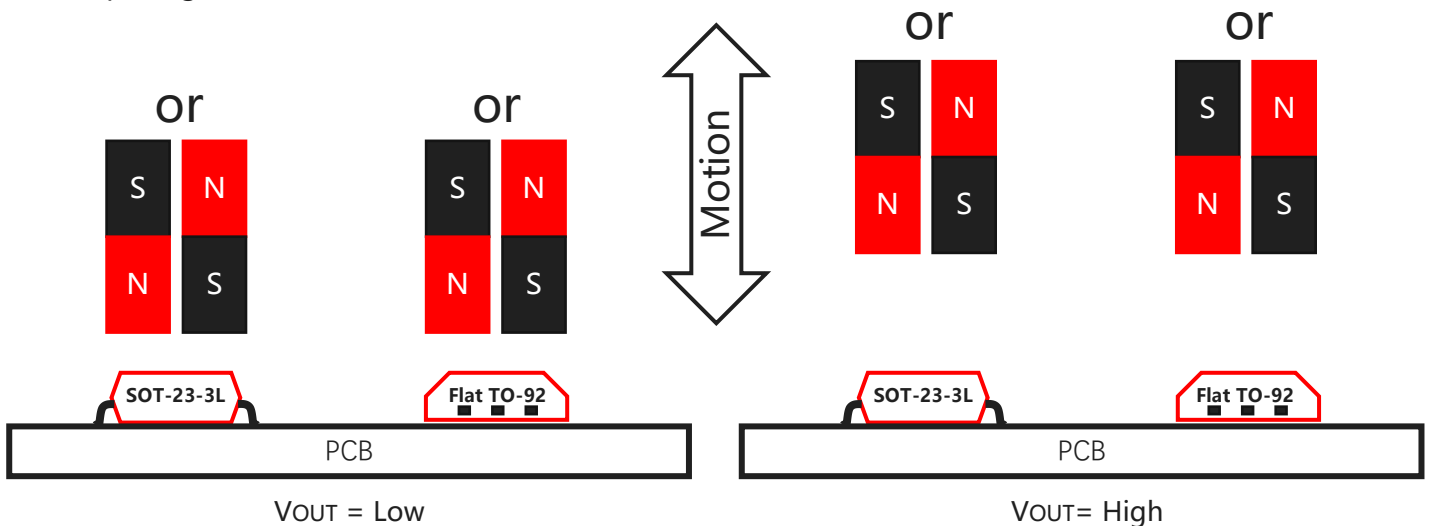

Figure.3 Flux Direction Polarity

## 9 Functional Block Diagram

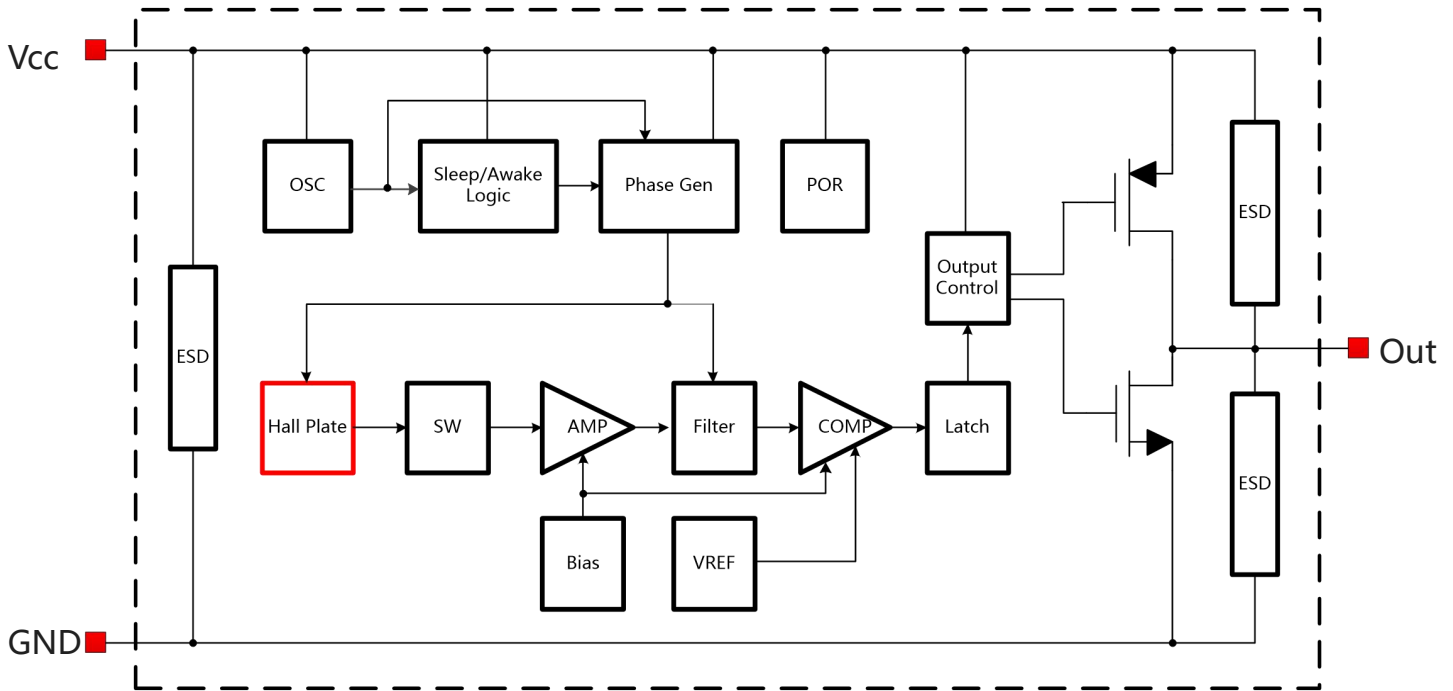

Figure.4 Functional Block Diagram

## 10 Electrical and Magnetic Characteristics

### 10.1 Absolute Maximum Ratings

Absolute maximum ratings are limited values to be applied individually, and beyond which the serviceability of the circuit may be impaired. Functional operability is not necessarily implied. Exposure to absolute maximum rating conditions for an extended period of time may affect device reliability.

| Symbol | Parameters                    | Min      | Max | Units |
|--------|-------------------------------|----------|-----|-------|
| VCC    | Supply Voltage                | -        | 7   | V     |
| VRCC   | Reverse Battery Voltage       | -0.5     | -   | V     |
| VOUT   | Output Voltage                | -        | 7   | V     |
| IOUT   | Continuous Output Current     | -        | 8   | mA    |
| TA     | Operating Ambient Temperature | -40      | 125 | °C    |
| TS     | Storage Temperature           | -50      | 150 | °C    |
| TJ     | Junction Temperature          | -        | 165 | °C    |
