Please be aware that an important notice concerning availability, standard warranty and use in critical applications of Murata products and disclaimers thereto appears at the end of this specification sheet.

## 1. Scope

This specification is for the LBWA1UZ1GC (imp005) module that provides connectivity to the internet via WiFi or Ethernet.

The device is pre-provisioned with keys to boot impOS – a fully maintained, secure OS that is part of the Electric Imp cloud service.

- 802.11 a/b/g/n 1x1 WiFi (dual band 2.4GHz & 5GHz)
  - 802.11a 13.0dBm +/-2.0dBm
  - 802.11b 17.0dBm +/-2.0dBm
  - 802.11g 13.0dBm +/-2.0dBm
  - 802.11n(5GHz) 12.0dBm +/-2.0dBm (20/40MHz channels)
  - 802.11n(2.4GHz) 12.0dBm +/-2.0dBm (20MHz channels)
  - RX Sensitivity -97dBm typical (@1Mbps)
  - Diversity antenna switch outputs
  - Supports WPA, WPA2, WPS
- 10/100MHz Ethernet MAC
  - Connects to external RMII Ethernet PHY & magnetics
- 32-bit Cortex R4 application processor
  - Secure boot from external QSPI
  - 32kB instruction & data caches
  - Over 1.2MB RAM for application use
  - 256kB of secure application storage on external QSPI
  - Secure credential storage on external QSPI
- Electric Imp OS & service
  - Robust embedded operating system with fail-safe & secure OS & application updates
  - Pre-provisioned MAC addresses (per interface) & per device secrets
  - TLS1.2-RSA-ECDHE (forward secrecy) cloud connection
  - Elliptic curve challenge-response to prevent device impersonation
  - Fully featured cloud VM for every device for easy integration with cloud services
  - Open source integrations with AWS, Azure, IBM Watson, etc
- LED drive for red/green status LEDs
- Phototransistor input for Electric imp's patented BlinkUp™ technology
  - Provides secure, replay-proof provisioning from a mobile app or webpage
- Flexible I/O
  - 28x GPIO, configurable to support 1x SPI, 1x I2C and 6xPWM
  - Dedicated interfaces: 1x SPI, 1x I2C, 3x UART, 1x USB host
- Compliant with the RoHS directive

## 2. Part Number

Sample Part Number
LBWA1UZ1GC-TEMP-IMP

Production Part Number
LBWA1UZ1GC-901

## 4.2. Terminal Configurations

Pin#	Name	Type	Description
D1	SFLASH_MISO_3	I/O	Flash data bit 4
A1	SFLASH_CLK	O	Flash clock
A2	SFLASH_MOSI_0	I/O	Flash data bit 1
A3	SFLASH_MISO_2	I/O	Flash data bit 3
A4	SFLASH_CS_L	O	Flash slave select
A5	GND	GND	
A6	RF_ANT0	I/O	Antenna port 0
A7	GND	GND	
A8	TEST_3V3	I	Tie high
A9	pinB	I/O	GPIO/SPI MOSI (default driven high)
A10	pinD	I/O	GPIO/SPI nCS (default driven high)
A11	pinA	I/O	GPIO/SPI CLK (default driven low)
A12	pinC	I/O	GPIO/SPI MISO
A13	RMII_TXEN	O	RMII Transmit Enable
A14	RMII_CRS_DV	I	Receive Data Valid
A15	RMII_MDC	O	RMII Management Data Clock
D2	RMII_TXD0	O	RMII Transmit Data Output
A16	RMII_RXD0	I	RMII Receive Data Input
A17	RMII_REF_CLK	I	Transmit Clock
A18	RMII_RXD1	I	RMII Receive Data Input
A19	RMII_TXD1	O	RMII Transmit Data Output
A20	RMII_MDIO	I/O	RMII Management Data I/O
A21	ANT1_DIV	O	ANT1 Diversity RF switch control
A22	VDD_3V0_IN	PWR	3.0V input: see design guide, sensitive trace. Connected to VDD_3V0_OUT.
A23	XTAL32K_IN	I	XTAL input
A24	XTAL32K_OUT	O	XTAL output
A25	ANT0_DIV	O	ANT0 Diversity RF switch control
A26	pinE	I/O	GPIO/PWM (default driven low)
A27	pinF	O	GPIO/PWM (default driven low)
A28	USB2_DN	I/O	USB Host Data Minus
A29	USB2_DP	I/O	USB Host Data Plus
D3	GND	GND	
A30	n/c	n/c	
A31	pinG	O	GPIO/PWM (default driven low)
A32	TEST_GND	I	Tie low
A33	GND	GND	
A34	USB_VDD_3V3	PWR	3.3V supply for USB
A35	VDD_3V3_IN_2	PWR	3.3V input
A36	GND	GND	
A37	VDDIO	PWR	I/O supply

A38	GND	GND	
A39	VDD_3V0_OUT	PWR	3.0V output of internal LDO
A40	GND	GND	
A41	DCDC_IN	PWR	Input to internal PMU LDO
A42	GND	GND	
A43	VDD	PWR	Main power input (VBAT)
A44	DCDC_OUT	PWR	PMU CBUCK Switching Regulator Out
D4	GND	GND	
A45	pinH	I/O	GPIO
A46	pinK	I/O	GPIO/i2cJK SDA (default driven high)
A47	pinJ	I/O	GPIO/i2cJK SCL (default driven low)
A48	n/c	n/c	
A49	pinM	I/O	GPIO
A50	BLINKUP_DIN	I	Blinkup data input
A51	BLINKUP_EN_L	O	Blinkup power enable (high = on)
A52	UART0_RXD	I	uart0 serial input
A53	UART0_RTS	O	uart0 request-to-send
A54	UART0_CTS	I	uart0 clear-to-send
A55	UART0_TXD	O	uart0 serial output
A56	VDDIO_3V3	PWR	I/O supply
A57	VDDIO_3V3	PWR	I/O supply for RMII
A58	SFLASH_MISO_1	I/O	Flash data bit 2
D5	n/c	n/c	
B1	pinL	I/O	GPIO
B2	I2C0_SCL	I/O	i2c0 SCL
B3	GND	GND	
B4	pinXA	I/O	GPIO/WAKE
B5	n/c	n/c	
B6	n/c	n/c	
B7	n/c	n/c	
B8	n/c	n/c	
B9	n/c	n/c	
B10	n/c	n/c	
D6	n/c	n/c	
B11	GND	GND	
B12	RESET_L	I	Reset (not recommended for chip reset, see PWR_DWN_L)
B13	HIB_WAKE_L	I	Pull-up to 3v3
B14	UART1_RXD	I	uart1 RXD (default driven low: note, use series resistor to limit current at boot)
B15	UART1_TXD	O	uart1 RXD
B16	n/c	n/c	
B17	TEST_GND	I	Tie low

B18	UART2_RXD	I	uart2 RXD (default driven low: note, use series resistor to limit current at boot)
B19	pinR	I/O	GPIO/USB_PWR_EN
D7	pinS	I/O	GPIO/PWM (default driven low)
B20	pinXB	I/O	GPIO/WAKE
B21	n/c	I/O	n/c
B22	n/c	I/O	n/c
B23	n/c	I/O	n/c
B24	n/c	I/O	n/c
B25	n/c	I/O	n/c
B26	n/c	I/O	n/c
B27	n/c	I/O	n/c
B28	GND	GND	
B29	GND	GND	
D8	pinT	I/O	GPIO
B30	SPI0_MOSI	O	spi0 SPI data master out
B31	SPI0_MISO	I	spi0 SPI data master in
B32	SPI0_CLK	O	spi0 SPI clock
B33	SPI0_CS_L	O	spi0 SPI slave select
B34	GND	GND	
B35	Red LED	O	Red LED drive (CA/CC – fit 10k resistor across red LED for CA/CC detect)
B36	Green LED	O	Green LED drive (CA/CC)
B37	pinQ	I/O	GPIO (default driven low)
B38	pinP	I/O	GPIO
D9	GND	GND	
C1	I2C0_SDA	I/O	i2c0 SDA
C2	pinXC	I/O	GPIO/WAKE
C3	pinXD	I/O	GPIO/WAKE
C4	n/c	n/c	
C5	PWR_DWN_L	I	Pull low to power chip down. Pull high to wake chip up. Use in preference to RESET_L if chip reset is desired
C6	TEST_GND	I	Tie low
D10	GND	GND	
C7	UART2_TXD	O	uart2 TXD
C8	GND	GND	
D11	GND	GND	
C9	pinU	I/O	GPIO/PWM (default driven low)
C10	pinV	I/O	GPIO/PWM (default driven low)
C11	pinW	I/O	GPIO/USB fault indication
C12	VDDIO_3V3	PWR	I/O supply
C13	pinXE	I/O	GPIO/WAKE
C14	pinY	I/O	GPIO

D12	GND	GND	
C15	TEST_3V3	I	Tie high
C16	pinN	I/O	GPIO
E1	GND	GND	
E2	GND	GND	
E3	GND	GND	
E4	GND	GND	
E5	GND	GND	
E6	GND	GND	
E7	GND	GND	
E8	GND	GND	
E9	GND	GND	
E10	GND	GND	
E11	GND	GND	
E12	GND	GND	

Preliminary datasheet

### 5. LED Drive

The indicator LED should be bicolor, because red, green and amber (red+green) are used to indicate status.

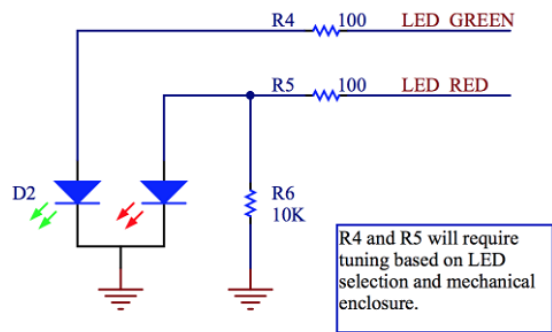

The LED drive pins will auto-detect common anode or common cathode parts. The detection is done by looking to see which way up the LED\_RED pin is idling at boot; to ensure this works correctly, please place a 10k resistor in parallel with the red LED.

The current drive on these pins is 8mA maximum. Please refer to section 15 for the recommended LEDs.

<Common anode diagram>

<Common cathode diagram>

Two specific LED codes indicate errors when talking to the SPI flash:

SPI flash not found	amber	red	off
SPI flash error	red	amber	off

If you encounter either of these codes, then this indicates an electrical connection issue or an incompatible flash part.

## 6. Phototransistor

The phototransistor is used to receive BlinkUp configuration data. Unlike other imps, the imp005 does not have an on-board ADC, so an external ramp ADC circuit is used to capture the light levels. This circuit feeds a pulse train into the imp where it is interpreted by software.

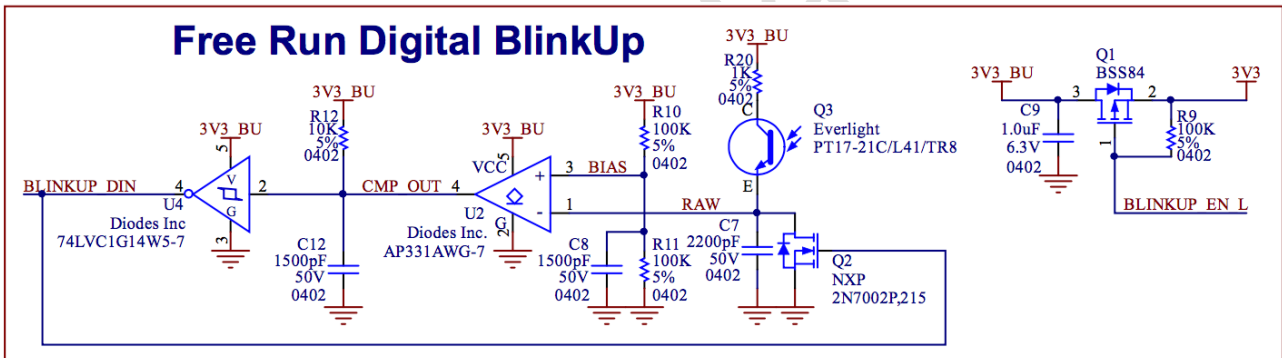

Sensitivity is tuned by adjusting C7 – a smaller capacitor increases sensitivity. Typically, the value used will range between 470pF and 4700pF, and the value should only be picked when the final optical path is available for testing. Please see the section on tuning blinkup on [www.electricimp.com](http://www.electricimp.com). Note that a C0G capacitor with 5% or better tolerance is recommended to reduce unit to unit variation.

The components used here have been chosen to be easily available and low cost. U2 is a simple comparator which triggers when the voltage on C7 rises to above  $0.5 \times V_{DD}$ , and R12/C12 and U4 give a fixed length pulse at the start of every slot, turning on Q2 to drain C7.

If the application is not power sensitive, Q1/R9 can be removed, connecting 3V3\_BU directly to the main 3V3 rail.

End-user BlinkUp sends data at between 30 and 60 bits per second, depending on the user's device. For factory configuration, data is typically sent at 142 bits per second using red LED(s) in a test fixture. If your application does not require optical configuration, config can be sent electrically at 142 bits per second from another micro using the OPTO\_IN pin. Please contact us for more details.

Please refer to section 15 for recommended phototransistors.

## 7. SPI Flash Requirements

An external SPI Flash part is required for operation.

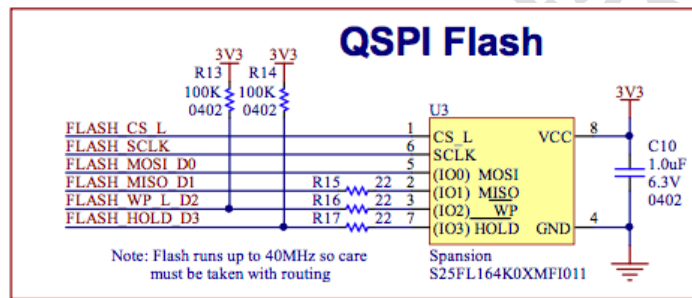

Minimum Size	32 Mbit (4 MByte)
Reserved for OS (must be pre-programmed)	0x000000 to 0x35E000 (3448 kByte)

The minimum size of the SPI Flash is 32Mbit (4MB), and the maximum size is 128Mbit (16MB). The area below address 0x35E000 (3448kB) is reserved for use by the OS. The remainder of the flash device is made available to user code programmatically, and may optionally be pre-programmed for user applications before assembly.

The imp005's SPI flash chip **must** support both 4KB and 64KB erases (command 0x20 and 0xD8) and Page Program (command 0x02).

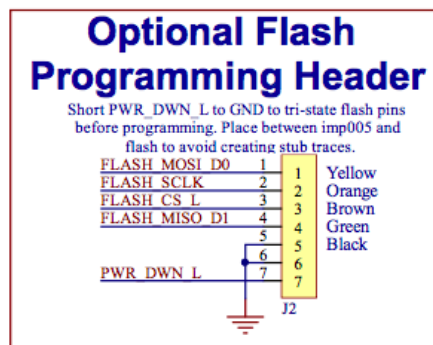

Though the imp005 always boots in single bit mode, it will move to QSPI if this is enabled via the device configuration page within flash. See the imp005 hardware design guide for more information on the device configuration page.

We recommend fitting 22R source termination resistors near the imp005 (for SCLK & MOSI/IO0) and the flash (for MISO/IO1, nWP/IO2 and HOLD/IO3).

### The OS image must be loaded onto the flash before the device will operate

This can be done before SMT, or in-circuit by asserting the PWR\_DWN\_L signal and driving the SPI bus directly; the imp005 breakout board exposes the necessary pins for this on a 0.1" header. The public cloud OS image is available for download from the imp005 design section of [www.electricimp.com](http://www.electricimp.com)

Note that the imp005, unlike the Murata 1GC, is pre-loaded with AES & RSA keys that will only accept firmware images signed by Electric Imp's FIPS140-2 HSM. It is not possible to run generic WICED software on this part.

## 8. Absolute Maximum Rating

		min.	max.	unit
Storage Temperature		-40	85	deg.C
Supply Voltage	VDD_VBAT	-0.5	5.5	V
	VDD1_35	-0.5	1.5	V
	USB_VDD_3V3	-0.5	3.9	V
	VDDIO	-0.5	3.9	V
	VDDIO_AUDIO	-0.5	3.9	V
	VDDIO_RMII	-0.5	3.9	V
	VDDIO_SD	-0.5	3.9	V

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability. No damage assuming only one parameter is set at limit at a time with all other parameters is set within operating condition.

## 9. Operating Condition

		min.	typ.	max.	unit
Operating Temperature Range <sup>(*)</sup>		-30		70	deg.C
Specification Temperature Range		-20		70	deg.C
Supply Voltage	VDD_VBAT	3.13		4.8	V
	VDD1_35	1.3	1.35	1.5	V
	USB_VDD_3V3	2.97	3.3	3.63	V
	VDDIO	2.97	3.3	3.63	V
	VDDIO_AUDIO	1.71		3.63	V
	VDDIO_RMII	1.71		3.63	V
	VDDIO_SD	1.71		3.63	V

[Note] All RF characteristics in this datasheet are defined by Specification Temperature Range. Default configuration of VDD\_3V3\_IN and VDD\_3V3\_IN2 is to connect with VDD\_3V3\_LDO. Specifications require derating at extreme temperatures.

## 10. External 32.768 kHz Low-Power Oscillator

This module uses a secondary low frequency clock for low-power mode timing.

Parameter	LPO Clock	unit
Normal Input Frequency	32.768	kHz
Frequency Accuracy	+/-200	ppm
Duty Cycle	30 – 70	%
Input Signal Amplitude	200 – 3300	mVp-p
Signal Type	Square-wave, or Sine-wave	-
Input Impedance <sup>1)</sup>	>100k <5	Ohm pF
Clock Jitter (During Initial Start-up)	< 10,000	ppm

1) When power is applied or switched off.

## 11. Power Up Sequence

Following timing diagram explain module power up sequence.

\*Power down sequence is opposite sequence of power up.

Note: The CYW43907 has an internal power-on-reset (POR) circuit. The device will be held in reset for a maximum of 110 ms after VDDC (internal LDO output) and VDDIO have both passed the POR threshold.

Note: The 10% - 90% VBAT rise time should not be faster than 40 microseconds. VBAT should be up before or at the same time as VDDIO. VDDIO should not be present first or be held high before VBAT is high.

Preliminary datasheet

## 12. Digital I/O Specifications

All specifications are at 3.3v.

Digital I/O Pins	Sym	min.	typ.	max.	unit
Input high voltage	VIH	2.00	-	-	V
Input low voltage	VIL	-	-	0.80	V
Output high voltage@2mA	VOH	VDDIO-0.4	-	-	V
Output low voltage@2mA	VOL	-	-	0.40	V

RF Switch control Output Pins	Sym	min.	typ.	max.	unit
Output high voltage@2mA	VOH	VDDIO-0.4	-	-	V
Output low voltage@2mA	VOL	-	-	0.4	V
Input capacitance	CIN	-	-	5	pF

GPIO, SPI, UART interfaces	Sym	min.	typ.	max.	unit
Input high voltage	VIH	2.0	-	VDDIO+0.5	V
Input low voltage	VIL	-0.5	-	0.8	V
Output high voltage@2mA	VOH	2.4	-	-	V
Output low voltage@2mA	VOL	-	-	0.4	V

Preliminary data

**13. Land pattern (Top View)**

**Note:** schematic and footprint symbols are available from Electric Imp for Altium & Eagle CAD packages.

It is strongly recommended that you use these fully validated symbols in your design where possible.

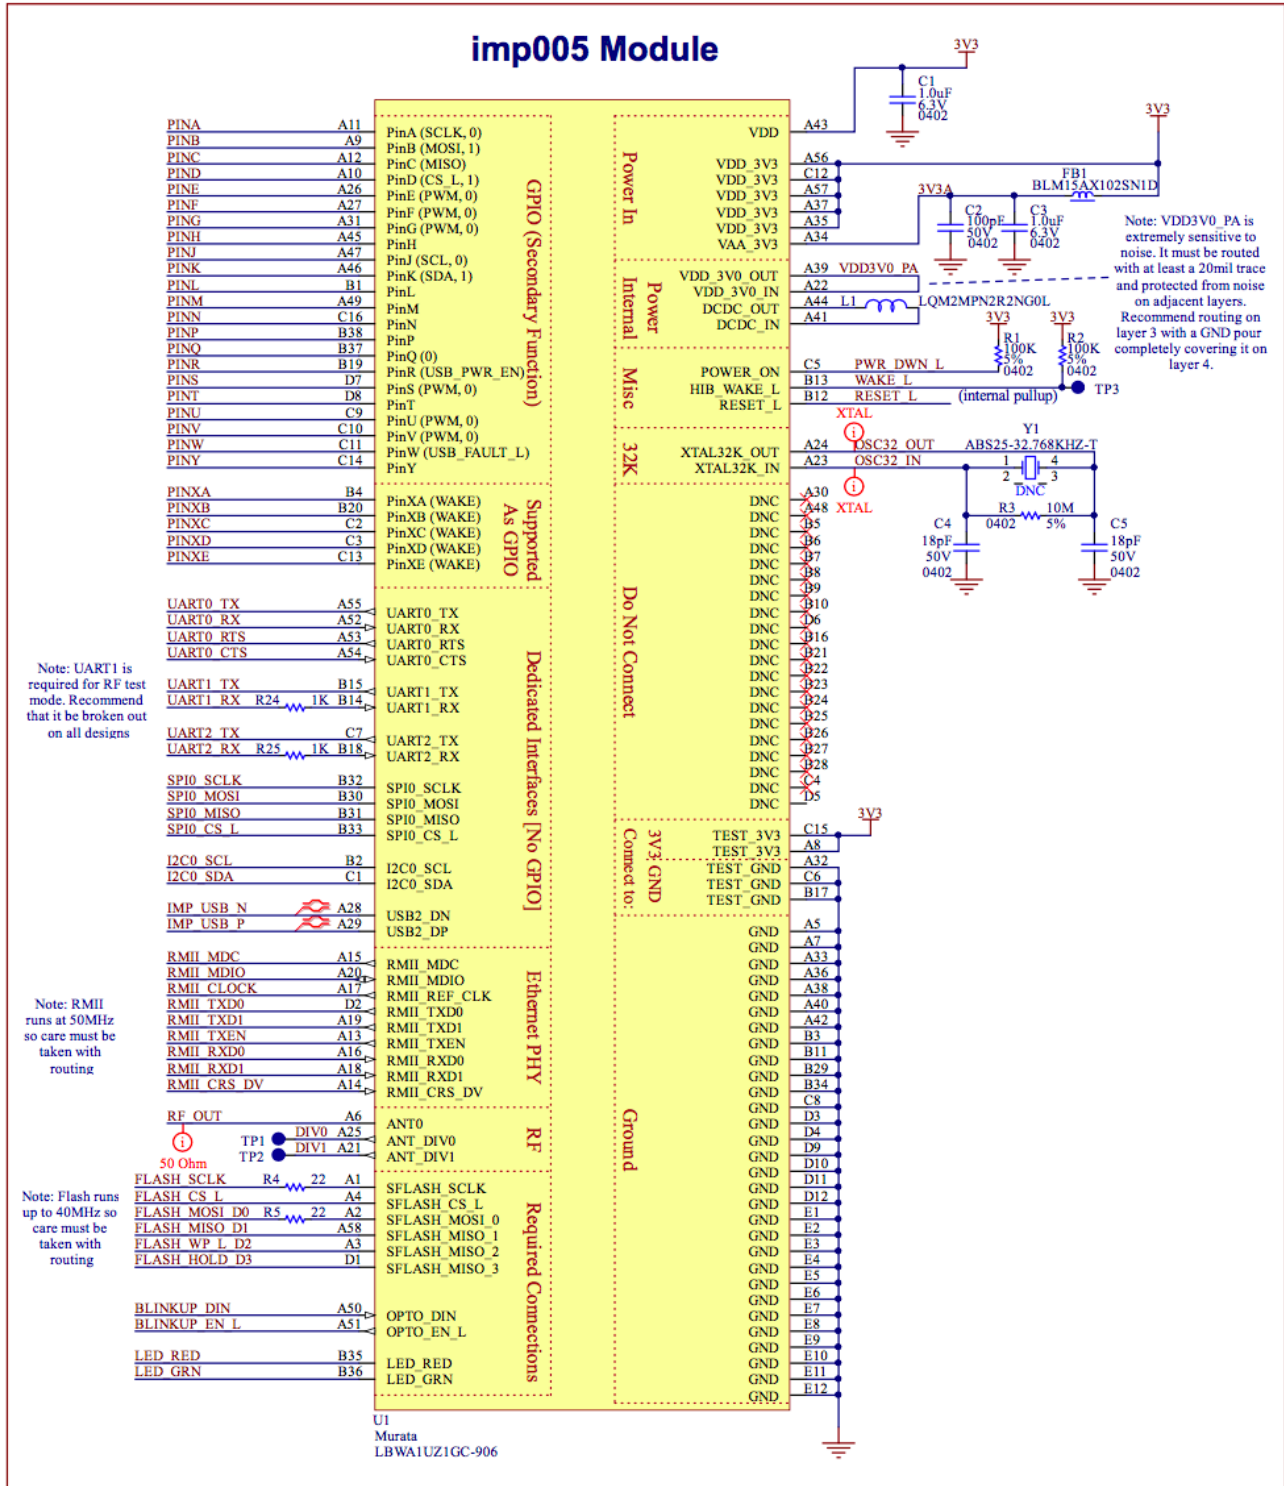

**Note:** For PINs on the board that have a copper pour (flood) associated with it, usually the case with Ground PINs, please assure that the Land Pattern (PCB Footprint) for these PINs becomes Solder Mask Defined (SMD). In other words, the SOLDERMASK (SOLDER RESIST) for these Ground (GND) pins should be 0.550 mm x 0.250 mm (basically SODLERMASK (SOLDER RESIST) becomes same size as the PIN).

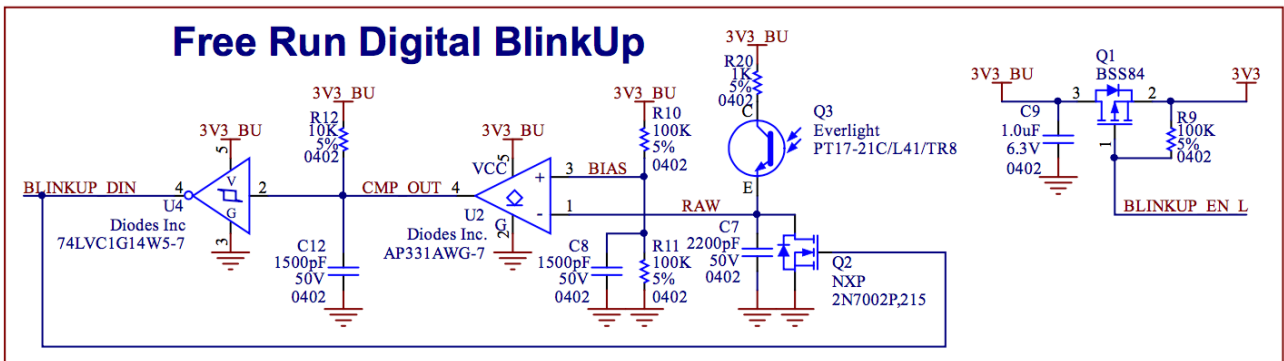

## 14. Reference Circuits

The Altium source files for many imp005-based designs are freely downloadable from [www.electricimp.com](http://www.electricimp.com) in the imp005 design section. It's strongly recommended that new designs copy as much as possible from these reference designs.

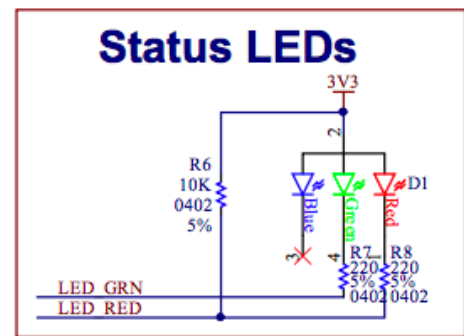

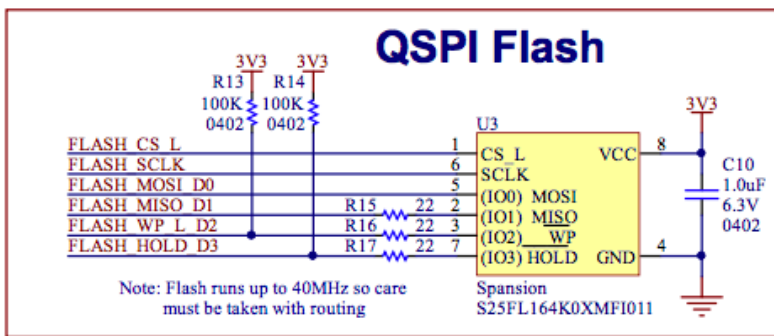

### 14.1. Module connections

**14.2. Blinkup circuit**

**14.3. Boot flash & status indication**

**14.4. Antenna**

When the Murata reference PCB antenna is used appropriately in your application, you may be able to reuse the FCC/IC modular approval of the type 1GC/imp005 module. Please contact Electric Imp for more details.

## 15. Recommended Components

### 15.1. Bi-color LED

	Manufacturer	Manufacturer's part number
<b>Surface mount</b>		
top-view	SunLED	XZMDKVG59W-1
	Liteon	LTST-C195KGJRKT
side-view	SunLED	XZMDKVG88W
	Bivar	SM1204BC
<b>Through-hole</b>		
3mm	SunLED	XLMDKVG34M
	Liteon	LTL1BEKVJNN

### 15.2. Phototransistor

	Manufacturer	Manufacturer's part number
<b>Surface mount</b>		
top-view	Everlight	PT17-21C/L41/TR8
	Fairchild	KDT00030TR
side-view	SunLED	XZRNI56W-1
	Everlight	PT12-21C/TR8
<b>Through-hole</b>		
3mm	SunLED	XRNI30W-1
	LiteOn	LTR-4206

### 15.3. SPI Flash

Size	Manufacturer	Manufacturer's part number
32 Mbit	Cypress	S25FL132K
64 Mbit	Cypress	S25FL164K
128 Mbit	Winbond	W25Q128JV

Note: Cypress 128Mbit S25FL127/128 parts are not compatible because they do not offer a uniform 4k erase size across the flash area.

### 15.4. Blinkup circuit

Part	Manufacturer	Manufacturer's part number
Comparator, open-drain	Diodes Inc	AP331AWG-7
Schmitt inverter	Diodes Inc	74LVC1G14W5-7

### 15.5. Ethernet PHY & magnetics

Part	Manufacturer	Manufacturer's part number
10/100 Ethernet PHY	Microchip	LAN8720A-CP-TR
RJ45 Magjack with LEDs	Stewart Connector	SI-50170-F

**16. Tape and Reel Packing**

(1) Dimensions of Tape (Plastic tape)

- 1) The corner and ridge radiuses (R) of inside cavity are 0.3mm max.
- 2) Cumulative tolerance of 10 pitches of the sprocket hole is  $\pm 0.2$ mm
- 3) Measuring of cavity positioning is based on cavity center in accordance with JIS/IES standard.

(2) Dimensions of Reel

(unit : mm)

(3) Taping Diagrams

- [1] Feeding Hole : As specified in (1)
- [2] Hole for chip : As specified in (1)
- [3] Cover tape : 62μm in thickness
- [4] Base tape : As specified in (1)

(4) Leader and Tail tape

- (5) The tape for chips are wound clockwise, the feeding holes to the right side as the tape is pulled toward the user.
- (6) The cover tape and base tape are not adhered at no components area for 250mm min.
- (7) Tear off strength against pulling of cover tape : 5N min.
- (8) Packaging unit : 1000pcs./ reel
- (9) material : Base tape : Plastic  
 Real : Plastic  
 Cover tape, cavity tape and reel are made the anti-static processing.
- (10) Peeling of force : 1.1N max. in the direction of peeling as shown below.

- (11) Packaging (Humidity proof Packing)

Tape and reel must be sealed with the anti-humidity plastic bag. The bag contains the desiccant and the humidity indicator.

## 17. NOTICE

### 17.1. Storage Conditions:

Please use this product within 6month after receipt.

- The product shall be stored without opening the packing under the ambient temperature from 5 to 35deg.C and humidity from 20 to 70%RH.

(Packing materials, in particular, may be deformed at the temperature over 40deg.C.)

- The product left more than 6months after reception, it needs to be confirmed the solderbility before used.

- The product shall be stored in non corrosive gas (Cl<sub>2</sub>, NH<sub>3</sub>, SO<sub>2</sub>, No<sub>x</sub>, etc.).

- Any excess mechanical shock including, but not limited to, sticking the packing materials by sharp object and dropping the product, shall not be applied in order not to damage the packing materials.

This product is applicable to MSL3 (Based on JEDEC Standard J-STD-020)

- After the packing opened, the product shall be stored at  $\leq 30$ deg.C /  $\leq 60$ %RH and the product shall be used within 168hours.

- When the color of the indicator in the packing changed, the product shall be baked before soldering.

Baking condition: 125+5/-0deg.C, 24hours, 1time

The products shall be baked on the heat-resistant tray because the material (Base Tape, Reel Tape and Cover Tape) are not heat-resistant.

### 17.2. Handling Conditions:

Be careful in handling or transporting products because excessive stress or mechanical shock may break products.

Handle with care if products may have cracks or damages on their terminals, the characteristics of products may change. Do not touch products with bear hands that may result in poor solder ability and destroy by static electrical charge.

### 17.3. Standard PCB Design (Land Pattern and Dimensions):

All the ground terminals should be connected to the ground patterns. Furthermore, the ground pattern should be provided between IN and OUT terminals. Please refer to the specifications for the standard land dimensions.

The recommended land pattern and dimensions is as Murata's standard. The characteristics of products may vary depending on the pattern drawing method, grounding method, land dimensions, land forming method of the NC terminals and the PCB material and thickness. Therefore, be sure to verify the characteristics in the actual set. When using non-standard lands, contact Murata beforehand.

### 17.4. Notice for Chip Placer:

When placing products on the PCB, products may be stressed and broken by uneven forces from a worn-out chucking locating claw or a suction nozzle. To prevent products from damages, be sure to follow the specifications for the maintenance of the chip placer being used. For the positioning of products on the PCB, be aware that mechanical chucking may damage products.

### 17.5. Soldering Conditions:

The recommendation conditions of soldering are as in the following figure.

When products are immersed in solvent after mounting, pay special attention to maintain the temperature difference within 100 °C. Soldering must be carried out by the above mentioned conditions to prevent products from damage. Set up the highest temperature of reflow within 260 °C. Contact Murata before use if concerning other soldering conditions.

Please use the reflow within 2 times.

Use rosin type flux or weakly active flux with a chlorine content of 0.2 wt % or less.

### 17.6. Cleaning:

Since this Product is Moisture Sensitive, any cleaning is not permitted.

### 17.7. Operational Environment Conditions:

Products are designed to work for electronic products under normal environmental conditions (ambient temperature, humidity and pressure). Therefore, products have no problems to be used under the similar conditions to the above-mentioned. However, if products are used under the following circumstances, it may damage products and leakage of electricity and abnormal temperature may occur.

- In an atmosphere containing corrosive gas ( Cl<sub>2</sub>, NH<sub>3</sub>, SO<sub>x</sub>, NO<sub>x</sub> etc.).
- In an atmosphere containing combustible and volatile gases.
- Dusty place.
- Direct sunlight place.
- Water splashing place.
- Humid place where water condenses.
- Freezing place.

If there are possibilities for products to be used under the preceding clause, consult with Murata before actual use.

As it might be a cause of degradation or destruction to apply static electricity to products, do not apply static electricity or excessive voltage while assembling and measuring.

### 17.8. Input Power Capacity:

Products shall be used in the input power capacity as specified in this specifications.

Inform Murata beforehand, in case that the components are used beyond such input power capacity range.

## **18. PRECONDITION TO USE OUR PRODUCTS**

PLEASE READ THIS NOTICE BEFORE USING OUR PRODUCTS.

Please make sure that your product has been evaluated and confirmed from the aspect of the fitness for the specifications of our product when our product is mounted to your product.

All the items and parameters in this product specification/datasheet/catalog have been prescribed on the premise that our product is used for the purpose, under the condition and in the environment specified in this specification. You are requested not to use our product deviating from the condition and the environment specified in this specification.

Please note that the only warranty that we provide regarding the products is its conformance to the specifications provided herein. Accordingly, we shall not be responsible for any defects in products or equipment incorporating such products, which are caused under the conditions other than those specified in this specification.

WE HEREBY DISCLAIMS ALL OTHER WARRANTIES REGARDING THE PRODUCTS, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, THAT THEY ARE DEFECT-FREE, OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS.

The product shall not be used in any application listed below which requires especially high reliability for the prevention of such defect as may directly cause damage to the third party's life, body or property. You acknowledge and agree that, if you use our products in such applications, we will not be responsible for any failure to meet such requirements. Furthermore, YOU AGREE TO INDEMNIFY AND DEFEND US AND OUR AFFILIATES AGAINST ALL CLAIMS, DAMAGES, COSTS, AND EXPENSES THAT MAY BE INCURRED, INCLUDING WITHOUT LIMITATION, ATTORNEY FEES AND COSTS, DUE TO THE USE OF OUR PRODUCTS IN SUCH APPLICATIONS.

- Aircraft equipment.
- Aerospace equipment
- Undersea equipment.
- Power plant control equipment
- Medical equipment.
- Transportation equipment (vehicles, trains, ships, elevator, etc.).
- Traffic signal equipment.
- Disaster prevention / crime prevention equipment.
- Burning / explosion control equipment
- Application of similar complexity and/ or reliability requirements to the applications listed in the above.

We expressly prohibit you from analyzing, breaking, reverse-engineering, remodeling altering, and reproducing our product. Our product cannot be used for the product which is prohibited from being manufactured, used, and sold by the regulations and laws in the world.

We do not warrant or represent that any license, either express or implied, is granted under any our patent right, copyright, mask work right, or our other intellectual property right relating to any combination, machine, or process in which our products or services are used. Information provided by us regarding third-party products or services does not constitute a license from us to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from us under our patents or other intellectual property.

Please do not use our products, our technical information and other data provided by us for the purpose of developing of mass-destruction weapons and the purpose of military use.

Moreover, you must comply with "foreign exchange and foreign trade law", the "U.S. export administration regulations", etc.

Please note that we may discontinue the manufacture of our products, due to reasons such as end of supply of materials and/or components from our suppliers.

By signing on specification sheet or approval sheet, you acknowledge that you are the legal representative for your company and that you understand and accept the validity of the contents herein. When you are not able to return the signed version of specification sheet or approval sheet within 30 days from receiving date of specification sheet or approval sheet, it shall be deemed to be your consent on the content of specification sheet or approval sheet. Customer acknowledges that engineering samples may deviate from specifications and may contain defects due to their development status. We reject any liability or product warranty for engineering samples. In particular we disclaim liability for damages caused by

- the use of the engineering sample other than for evaluation purposes, particularly the installation or integration in the product to be sold by you,
- deviation or lapse in function of engineering sample,
- improper use of engineering samples.

We disclaim any liability for consequential and incidental damages.

If you can't agree the above contents, you should inquire our sales.
