

#### **FEATURES**

- Industry leading MTBF
- Certified to IEC 60601 Ed.3 medical (2 x MOPP Pri-Sec; 1 x MOPP Pri-Chassis Ground), AC input models.
- IEC 60950-1 compliant
- IEC 60335-1 Certificate
- Designed to comply with IEC60601-1-2 4<sup>th</sup> Edition EMC Standard Requirements<sup>1</sup>
- 250W Convection, 100Vac to 264Vac +50C operation
- Very low no load standby power; designed to meet ENERGY STAR® Program Requirements for Single Voltage External AC-DC Power Supplies
- True zero load operation of the Main (V1) output; no minimum load requirements Constant Current overload protection option<sup>3</sup>
- 3" x 5" industry standard footprint
- Optional DC input capability
- High efficiency 94% typical
- Remote sense, main output
- Universal AC input with active PFC
- Less than 1U high
- RoHS compliant
- Active inrush protection
- Compatibility with MVAC250 Series products<sup>2</sup>
- Droop current share, output Terminal block option

Two-year warranty

When deployed in the End User equipment

<sup>2</sup> Fan output of MVAC250 series not available on this product series 3 Select voltage variants

### PQC250 Series 250W 3" x 5" Convection Cooled AC-DC Power Supply

#### DESCRIPTION

The PQC250 series switching power supplies utilize advanced component and circuit technologies to deliver high efficiency and low power dissipation, in both operational and standby operation, in a compact 3.0" x 5.0" x 1.40" package. Designed for industrial, medical, computing, communications, telecom, consumer, and other OEM applications, and deployable in 1U customer enclosures. All models offer universal AC input capability with active power factor correction (PFC) and compliance to worldwide safety and EMC standards.

#### ORDERING GUIDE (BASIC MODEL NUMBER)

		Main output (V	Aux (	Output (V2)	Max. Load	
Model Number <sup>3</sup>	Voltage Vdc	Current @ 50°C 250W	<u>Current</u> @ 70°C 1200W	Vdc	Current 50°C & 70°C	Capacitance Main output <sup>4</sup>
PQC250-12yyy	12	20.8A	16.7A			6000µF
PQC250-18yyy	18	13.8A	11.1A			1,600uF
PQC250-24yyy	24	10.4A	8.3A			1200µF
PQC250-28yyy	28	8.93A	7.14	5	0.5A	1200µF
PQC250-30yyy	30	8.33A	6.6A	5	0.54	1000µF
PQC250-36yyy	36	6.9A	5.6A			1000µF
PQC250-48yyy (PoE Compliant)	48	5.2A	4.2A			750µF
PQC250-54yyy (PoE Compliant)	54	4.6A	3.7A			500µF
	0.11	1.11 1.1				

Optional cover kit assembly see <u>PQC-COVER</u> datasheet for details POC-COVER <sup>1</sup> Output De-Rating at 70°C is for horizontal orientation with component side up only. Please refer to ACAN-77 for details

<sup>2</sup>29V model available, consult with factory for more information

See Part Number Structure for "yyy" options refer to: Part\_Num per Options Guide

<sup>4</sup>Max capacitance limit does not apply to constant current "C" option

INPUT CHARACTERISTICS					
Parameter	Conditions	Min	Nom	Max	Units
Input Voltage AC Operating Range	Single Phase	90	100/240	264	Vac
Input Frequency		47	50/60	63	Hz
Turn-on input voltage	Input rising	75		90	Vac
Turn-off input voltage	Input falling	65		80	Vac
DC input <sup>1, 2</sup>		127		300	
DC IIIpul <sup>.,</sup>		260		400	
	$Vin = 115V_{AC}$ ; Full Load		2.5		Arms
Maximum input current	<sup>2</sup> Vin = 127-300Vdc			2.7	Adc
	$^{2}$ Vin = 260-400Vdc			1.5	Adc
Inrush Current	230V <sub>AC</sub> ,Cold start, 25°C;		30		Apk
Power Factor	At 115VAC, full load	0.95			W/VA
Hold-up Time	90V <sub>AC</sub> ; Full Load	16			msec
Efficiency @ 0201/ for D00050 40	20% Full Load		88.5		
Efficiency @ 230V <sub>AC</sub> for PQC250-48	50% Full Load		94		%
model.	100% Full Load		95		1
No Load Input Power Consumption	$(PS_ON = OFF; Aux (V2) = 0A$			<0.5	W

<sup>1</sup>260-400Vdc range applies to PQC250-xxH variants only; consult with the sales channel for details and availability. <sup>2</sup> Medical certification applies only to AC input models.

OUTPUT CHARACTERISTICS					
Parameter	Conditions	Min	Nom	Max	Units
Line, Load Regulation	Main (V1) Output <sup>1</sup>			±1	%
Line, Ludu negulation	Aux (V2) Output			±5	70
Minimum Load Capability	Stable Operation	0			Α
Output Ripple	Zero to Full Load <sup>2</sup>			1	%
<sup>1</sup> Zero load output voltage may exceed the	regulation window however will not cause OVP t	o engage or PWBOK to char	ine to low stat	e	

A 500mA min. load current is required to keep output voltage within  $\pm 1\%$ 

<sup>2</sup>Ripple and noise are measured with 0.1µF ceramic capacitor and 10µF tantalum capacitor. A short coaxial cable with 50 ohm termination is used.

AUXILIARY OUTPU	T CHARACTERIST	ICS (ALL MODEL	S)		
Auxiliary Output	Aux Output Voltage	Load Current	Load Capacitance	Line, Load, Cross Regulation	Ripple Voltage & Noise
Aux (V2)	5V	0 to 0.5A	0 to 220µF	± 5%	120mVPP

CURRENT SHARIN	
Model Number	Description
	Main Output current share is achieved using "the droop method". Nominal output voltage is achieved at 50% load and output voltage increases/decreases approximately ±3% of nominal voltage. This regulation window does not include the additional tolerance due to line, temperature, long term stability etc.
PQC250-XX-Dxx	Startup of parallel power supplies is not internally synchronized. If more than 250W combined power is needed, start-up synchronization must be provided by
Refer to	system using a common PS_ON signal. To account for ±10% full load current sharing accuracy and the reduction in full load output voltage due to droop, available
ACAN-78 for	output power must be derated by 15% when units are operated in parallel. Current sharing can be achieved with or without remote sense connected to the
additional details	common load.
	ORing protection is available on the POC250-xxDRT models (see Application notes, ACAN-78 for additional details): Aux (V2) output can be tied together for

ORing protection is available on the PQC250-xxDRT models (see Application notes, <u>ACAN-78</u> for additional details); Aux (V2) output can be tied together for redundancy but total combined output power must not exceed 2.5W, external ORing devices are recommended to preserve redundancy.

EMISSIONS AND IMMUNITY		
Characteristic	Standard	Compliance
Input Current Harmonics	IEC/EN 61000-3-2	Class A
Voltage Fluctuation and Flicker	IEC/EN 61000-3-3	Complies
	EN 55032	Class B
Conducted Emissions	FCC Part 15	Class B
Dedicted Emissions	CISPR 22 -3 meter	Class B
Radiated Emissions	FCC 15.109 - 3 meter	Class B
ESD Immunity	IEC/EN 61000-4-2	Level 4, Criterion 2
Radiated Field Immunity	IEC/EN 61000-4-3	Level 3, Criterion A
Electrical Fast Transient Immunity	IEC/EN 61000-4-4	Level 4, Criterion A
Surge Immunity	IEC/EN 61000-4-5	Level 3, Criterion A (Com. Mode: 2kV 12 OHM, Diff. Mode: 1kV, 2 OHM)
Radiated Field Conducted Immunity	IEC/EN 61000-4-6	Level 3, 10V/m, Criterion A
Magnetic Field Immunity	IEC/EN 61000-4-8	Level 3, Criterion A
Voltage dips, interruptions <sup>2</sup>	IEC/EN 61000-4-11	Level 3, Criterion B
Designed to comply with IEC60601-1-2 4th Edition EMC Standard Rec	wirements	

<sup>2</sup> For AC source interruptions that extend beyond 20ms then the output it shall be necessary to recycle the incoming AC source. Allow the AC source to be removed for a period of not less than 10s before reapplying,

#### EMI CONSIDERATIONS

For optimum EMI performance, the power supply should be mounted to a metal plate grounded to all 4 mounting holes of the power supply. To comply with safety standards, this plate must be properly grounded to protective earth (see mechanical dimension notes). Pre-compliance testing has shown the stand-alone power supply to comply with EN55022 class B radiated emissions with a metal enclosure with grounded base plate. See PQC-COVER for details - testing was based on adding a toroid, Fair-Rite#5961004901 with five turns of both of the output leads. Radiated emission results vary with system enclosure and cable routing paths.

#### STATUS AND CONTROL SIGNALS Conditions Parameter Models This pin must be pulled low (sink current >2mA) to +5V AUX RTN (connector J3 Pin 8) to (enable) turn on the main output. The +5V AUX output is All Models independent of the PS\_ON signal, and comes up automatically when the input AC or input DC voltage is applied within their specified operating (Except as noted) PS\_ON ranges. This pin can be left unterminated (or alternatively pulled high to +5V\_AUX; Connector J3 Pin 1) to (enable) turn on the main output. The +5V\_AUX Connector J3 Pin 4 output is independent of the PS ON signal, and comes up automatically when the input AC or input DC voltage is applied (within their respective "C" Option Models specified operating ranges). If it is desired to turn off the Main Output (during normal operation) then this pin can be pulled "low" (sink current >2mA) to +5V\_AUX\_RTN. PWR OK Open collector logic goes high 40-100ms after the main output is within regulation; it goes low at least 2msecs before loss of regulation. Internal Connector All Models 10K pull up to +5V\_AUX is provided. Applications using the PWR\_0K signal should maintain a minimum load of 5W on the main output. J3 Pin 2

250W 3" x 5" Convection Cooled AC-DC Power Supply

#### Transient Performance, 12V Model

### **Murata Power Solutions**

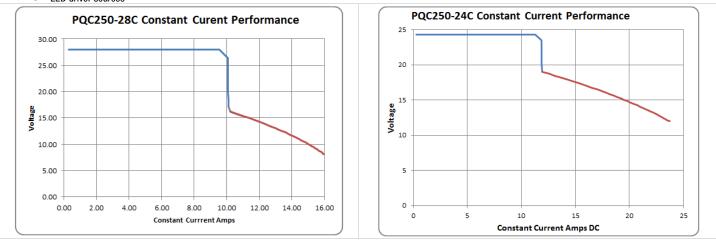

#### CONSTANT CURRENT OVERLOAD PERFORMANCE DATA; PQC250-xxC VARIANTS

The "C" option variant provides an overload (abnormal) Constant Current (CC) characteristic as shown in the following curves. This option will enable the PQC250 to successfully operate (at initial startup or during normal operation) in applications experiencing (large current) transient loads such as:

- Large capacitive loads
- Incandescent (i.e. halogen) lamps .
- Inductive loads (motors and solenoids) .
- LED driver sources

Curves generated for the PQC250-xxC variants by subjecting output to an incremental load (constant resistance) equivalent to 1Adc increments between 0A and 50A dc. 1. The resultant curve shows current limited to a constant "brick wall" shown by the blue portion of the curves. 2.

If the load current is further incremented the current is still limited but will "tail" and result in the red portion of the curves. End Users should be aware of the potential 3 magnitude of the "current tail" and rate their track/trace and/or interconnection cables accordingly.

If the overload (abnormal) current is maintained above maximum load for an extended period then internal over temperature protection may (will) shut down the output 4. to prevent potential thermal overstress of components and maintain safe and reliable operation.

### PQC250 Series 250W 3" x 5" Convection Cooled AC-DC Power Supply

#### THERMAL CONSIDERATIONS

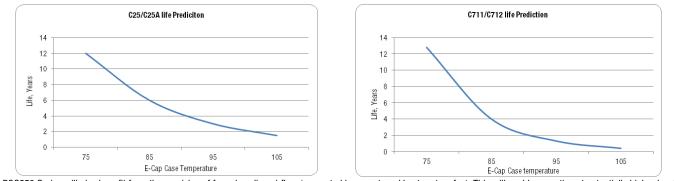

System thermal management is critical to the performance and reliability of the PQC250 series power supplies. Performance derating curves are provided which can be used as a guideline for what can be achieved in a system configuration with controlled airflow at various input voltage conditions.

The product is designed to provide 250W using natural convection cooling when mounted horizontally with un-obstructed convection current airflow flow at room temperature. At elevated temperature the power supply data is taken while it is surrounded by a large vented enclosure to minimize forced cross flows inherent in the elevated temperature test.

The product is capable of operation when mounted in other orientations; operational/derating curves shall be provided to show the effect of such mounting. See ACAN-77 for additonal details

#### Capacitor case temperature and Mounting Orientation:

The power supply can operate in any orientation; however, the power supply contains overtemperature protection that will shut off the output as the temperature of the power supply heatsinks approach the limt specified in the protection table. Additonally, life expectantcy of the power supply is inversely proportional to the case temperature of electrolytic capacitors C25, C25A, C711 & C712. The designer of the system in which this power supply is deployed should consider this relationship to ensure optium product life. The following charts illustrate this relationship:

The PQC250 Series will also benefit from the provision of forced cooling airflow (generated by an external host system fan). This will enable operation at potentially higher local surrounding ambient temperatures.

### 250W 3" x 5" Convection Cooled AC-DC Power Supply

Note: For parallel (current share) operation it is required to connect the sharing power supplies in parallel (+DC out connected together and DC out Return connected together on sharing power supplies. Since each output has an identical "droop" share characteristic then each output will intrinsically share the total load current. See <u>ACAN-78</u> for more details.

## 250W 3" x 5" Convection Cooled AC-DC Power Supply

### 250W 3" x 5" Convection Cooled AC-DC Power Supply

ETY CONSIL	1	This power supply is a component level power supply intended for use in Class I or Class II applications. Secondary ground traces need to be suitably
	1.	isolated from primary ground traces when used in Class II applications.
	0	When the power supply is used in Class II equipment, all ground traces and components connected to the primary side are considered primary for
	Ζ.	spacing and insulation considerations.
	2	Protective bonding conductor from the end product protective earthing terminal must be tied to TB1. For optimum EMI performance, while maintaining
	э.	Flote the boling contact in the end product protective earling terminal must be ded to TBT. For optiminal market, while the market market is a set of the
-		Class I safety isolation all 4 mounting holes must be tied to the end product protective earthing terminal. To maintain Class II safety isolation mounting holes MTG1 and MTG2 need to be isolated from protective earth and should use standoffs of non-conductive material.
	4	This power supply requires mounting standoffs of minimum 6mm in height. If there is risk of chassis deformation or shorter standoff height is
	4.	This power supply requires mounting statutions of minimum onthin integrit, in there is now of chassis deronhautor of shorter statution negatives
• \		required, an appropriate insulator must be used under the power supply with adequate extension beyond the outline of the power supply. In all cases,
	F	the applicable safety standards must be applied to ensure proper creepage and clearance requirements are met.
	э.	The primary heatsink is considered a live primary circuit, and should not be touched. It is recommended that the primary heatsink be kept at least
		3.5mm from chassis, and 7mm from secondary circuits. In all cases, the applicable safety standards must be applied to ensure proper creepage and
	c	clearance requirements are met. This product is publicate the following constraints and the Life and Sefeth Critical Application Select Deliver, http://www.pupte.
