Rev. 8 — 2 July 2024

Product data sheet

1. General description

The 74AVC1T45-Q100 is a single bit, dual supply transceiver with 3-state output that enables bidirectional level translation. It features two 1-bit input-output ports (A and B), a direction control input (DIR) and dual supply pins ($V_{CC(A)}$ and $V_{CC(B)}$). Both $V_{CC(A)}$ and $V_{CC(B)}$ can be supplied at any voltage between 0.8 V and 3.6 V making the device suitable for translating between any of the low voltage nodes (0.8 V, 1.2 V, 1.5 V, 1.8 V, 2.5 V and 3.3 V). Pins A and DIR are referenced to $V_{CC(A)}$ and pin B is referenced to $V_{CC(B)}$. A HIGH on DIR allows transmission from A to B and a LOW on DIR allows transmission from B to A.

The device is fully specified for partial power-down applications using I_{OFF} . The I_{OFF} circuitry disables the output, preventing any damaging backflow current through the device when it is powered down. In suspend mode when either $V_{CC(A)}$ or $V_{CC(B)}$ are at GND level, both A and B are in the high-impedance OFF-state.

This product has been qualified to the Automotive Electronics Council (AEC) standard Q100 (Grade 1) and is suitable for use in automotive applications.

12. Application information

12.1. Unidirectional logic level-shifting application

The circuit given in Fig. 9 is an example of the 74AVC1T45-Q100 being used in an unidirectional logic level-shifting application.

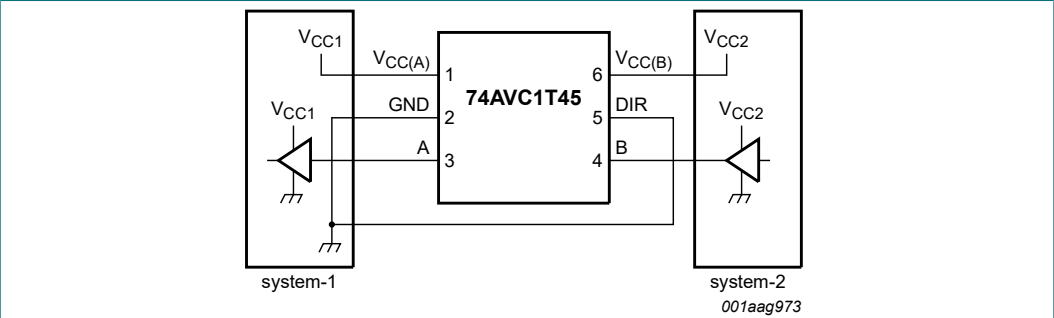

Fig. 9. Unidirectional logic level-shifting application

Table 16. Description unidirectional logic level-shifting application

Pin	Name	Function	Description
1	V _{CC(A)}	V _{CC1}	supply voltage of system-1 (0.8 V to 3.6 V)
2	GND	GND	device GND
3	A	OUT	output level depends on V _{CC1} voltage
4	B	IN	input threshold value depends on V _{CC2} voltage
5	DIR	DIR	the GND (LOW level) determines B port to A port direction
6	V _{CC(B)}	V _{CC2}	supply voltage of system-2 (0.8 V to 3.6 V)

12.2. Bidirectional logic level-shifting application

Fig. 10 shows the 74AVC1T45-Q100 being used in a bidirectional logic level-shifting application. Since the device does not have an output enable pin, the system designer should take precautions to avoid bus contention between system-1 and system-2 when changing directions.

Fig. 10. Bidirectional logic level-shifting application

Table 17 gives a sequence that will illustrate data transmission from system-1 to system-2 and then from system-2 to system-1.

Table 17. Description bidirectional logic level-shifting application

H = HIGH voltage level; L = LOW voltage level; Z = high-impedance OFF-state.

State	DIR CTRL	I/O-1	I/O-2	Description
1	H	output	input	system-1 data to system-2
2	H	Z	Z	system-2 is getting ready to send data to system-1. I/O-1 and I/O-2 are disabled. The bus-line state depends on bus hold.
3	L	Z	Z	DIR bit is set LOW. I/O-1 and I/O-2 still are disabled. The bus-line state depends on bus hold.
4	L	input	output	system-2 data to system-1

12.3. Power-up considerations

The device is designed such that no special power-up sequence is required other than GND being applied first.

Table 18. Typical total supply current (I_{CC(A)} + I_{CC(B)})

V _{CC(A)}	V _{CC(B)}							Unit
	0 V	0.8 V	1.2 V	1.5 V	1.8 V	2.5 V	3.3 V	
0 V	0	0.1	0.1	0.1	0.1	0.1	0.1	µA
0.8 V	0.1	0.1	0.1	0.1	0.1	0.7	2.3	µA
1.2 V	0.1	0.1	0.1	0.1	0.1	0.3	1.4	µA
1.5 V	0.1	0.1	0.1	0.1	0.1	0.1	0.9	µA
1.8 V	0.1	0.1	0.1	0.1	0.1	0.1	0.5	µA
2.5 V	0.1	0.7	0.3	0.1	0.1	0.1	0.1	µA
3.3 V	0.1	2.3	1.4	0.9	0.5	0.1	0.1	µA

12.4. Enable times

Calculate the enable times for the 74AVC1T45-Q100 using the following formulas:

- t_{en} (DIR to A) = t_{dis} (DIR to B) + t_{pd} (B to A)
- t_{en} (DIR to B) = t_{dis} (DIR to A) + t_{pd} (A to B)

In a bidirectional application, these enable times provide the maximum delay from the time the DIR bit is switched until an output is expected. For example, if the 74AVC1T45-Q100 initially is transmitting from A to B, then the DIR bit is switched, the B port of the device must be disabled before presenting it with an input. After the B port has been disabled, an input signal applied to it appears on the corresponding A port after the specified propagation delay.
