## Compact size sensor realizes wide sensing area & long sensing range

### Ideal sensing area with very little null zone

The advanced optical system of the **PX-2** series reduces the null zones in front of an automatic guided vehicle (AGV). The null zones at the sides are further minimized if auxiliary sensors which can be easily mounted with connectors are used.  
(For **PX-24**, **PX-24ES**, **PX-23ES** and **PX-26**)

### Sensing areas selectable as per route condition

Sensing areas can be selected with switches to suit the route conditions of an AGV.

Further, in case of **PX-24ES** and **PX-23ES**, the sensing areas can also be selected with external signals.

### Compact size for space-saving

Its size is half of a conventional model, and the attached cable orientation is freely adjustable. Hence, it can also fit in a small AGV. Moreover, sensitivity adjustment can be done on the front face.

### Long sensing range 5 m 16.404 ft type

**PX-26** has a long sensing range of 5 m 16.404 ft. Even on a high-speed AGV, it can detect an object quite early so that slowing down and stopping are smooth.

### Automatic interference prevention function

One **PX-2** sensor can simultaneously receive beams from 25 Nos. of other **PX-2** sensors without resulting in any interference. Even if AGVs are facing each other, the **PX-2** sensor on one AGV reliably detects the other AGVs. Hence, it can be safely used even at a place where several AGVs are moving.

### Sleep function

The sensor can be put into the sleep (stand-by) condition when it is not used and can be restored to operating condition by an external signal. Consequently battery is conserved as the power consumption is reduced to 1/5.

### External sensitivity adjustment

The sensitivity of the sensor can be adjusted, within the range set by the manual adjuster, by an external input.  
(For **PX-24**, **PX-24ES**, **PX-23ES** and **PX-26**)

**PRECAUTIONS FOR PROPER USE**

Refer to General precautions.

**All models**

**Automatic interference prevention function**

- In case several sensors are used at the same place, take care that the number of sensors from which beams may be simultaneously incident is 25 sensors or less.

**Sleep function (Incorporated in all models)**

- When the sleep input is made Low, the sensor goes into the sleep state and the operation can be stopped. Power consumption during the sleep state is 0.3W max. (Without auxiliary sensors).

- Notes:
- Response time of the sleep input is 50ms.
  - Reactivation from the sleep state to the operation state takes 0.7 sec. approx. Operation during this transient state should be avoided.
  - When the sleep function is not used, keep the sleep input wire open or insulated and prevent contact with other wires.

Notes: 1) Not incorporated in **PX-26**.  
2) Incorporated in **PX-24ES** and **PX-23ES**.

**Others**

- Do not use during the initial transient time (0.7 sec.) after the power supply is switched on.
- Take care that an initial rush current (1.5 A approx. at 10 V DC and 5 A approx. at 31 V DC) will flow when the power supply is switched on.

Note: Response time of area the selection input is 80 ms.

**PRECAUTIONS FOR PROPER USE**

Refer to General precautions.

**PX-24 PX-24ES PX-23ES PX-26**

**External sensitivity adjustment function**

- The sensitivity can be adjusted, within the range set by the manual sensitivity adjuster, by an analog voltage (0 to +5 V) applied to the external sensitivity adjustment input. The sensitivity varies with the magnitude of the applied voltage.

Notes: 1) The sensitivity of the auxiliary sensor is not changed.  
 2) Sensitivity adjustment beyond the range set by the manual sensitivity adjuster is not possible.

Input voltage	0 V ← → +5 V or open
Sensitivity	Minimum ← → Maximum (Maximum sensitivity set by the manual sensitivity adjuster)

3) This wire should be insulated if it is not used.

**Extraneous light monitor function**  
(Not incorporated in **PX-22** and **PX-21**)

- If the sensor receives modulated light other than its own (including auxiliary sensor's) light, the extraneous light monitor output turns ON. The operation of the extraneous light monitor output has absolutely no affect on sensing. It is useful for recognizing presence of other sensors near this sensor in case of intersecting AGV paths, etc.

Note: The extraneous light monitor output is not incorporated with a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

**PX-SB1**

- This sensor must always be used with the applicable main sensor. This sensor does not work as a standalone unit. (It cannot be used with **PX-22** or **PX-21**.)

**Selection of auxiliary area**

- Aux area can be selected by aux area ineffective input of the main sensor.

Ineffective input	Auxiliary left OUT 1 area	Auxiliary right OUT 1 area
Sensing area		
Auxiliary left / right OUT 1 area ineffective 	L	L
Auxiliary left OUT 1 area effective 	H	L
Auxiliary right OUT 1 area effective 	L	H
Auxiliary left / right OUT 1 area effective 	H	H

L: Low (0 to 1 V), H: High (4.5 to 31 V or open)  
 Note: Aux area disable input has nothing to do with the external control function selection switch of the main sensor.

**Sensitivity setting**

- Sensitivity adjustment of **PX-SB1** is performed with the emitter volume. If sensitivity cannot be set to close range even after adjusting the emitter volume, then an aux sensor might be receiving the light from the main sensor. If that is the case, adjust sensitivity with the emitter volume and the receiver volume. For details, see the instruction manual that comes with the product.

**Connection with the main sensor**

- Connect the main sensor connector attached cable to the aux sensor connector attached cable.
- The spiral lead wire side of the main sensor connector attached cable is the left aux sensor side.
