SU-7/SH

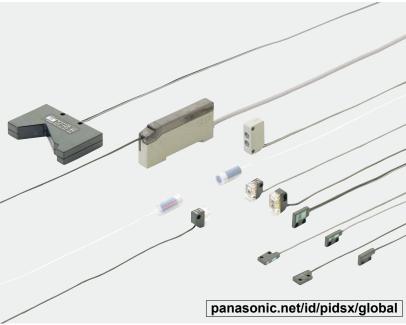

General terms and conditions...... F-3 Related Information

■ Glossary of terms......P.1549~

■ Selection guideP.231~

■ General precautions P.1552~

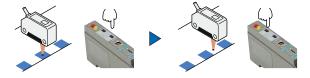

Simple and compact design

Simple automatic sensitivity setting

Anyone can carry out the optimum sensitivity setting by simply pressing two buttons.

(1) Aligning with the mark to be detected, press the "ON" button. 2 Aligning with the background, press the "OFF" button.

MOUNTING / SIZE

Thickness: 10 mm 0.394 in

Installation space can be greatly reduced as the SU-7 amplifier is just 10 mm 0.394 in thick. $(W10 \times H31.5 \times D67 \text{ mm } W0.394 \times H1.240 \times D2.638 \text{ in})$

ENVIRONMENTAL RESISTANCE

Chemical resistant type

SH-61R

Strong against chemicals

Since the sensor heads and the attached cables are covered by fluorine resin, SH-61R can be used in a harsh chemical environment.

Moreover, it has a long sensing range of 2.5 m 8.202 ft.

Quick wire connection

A snap of the lever secures the connection of the sensor head cables on the SU-7 amplifier. It is no longer required to strip the wire insulation. Further, the exclusive stripper (accessory) can be used to easily peel off the sensor cable outer sheath.

1)Strip the cable sheaths with the exclusive stripper. 2 Insert the wires into

3Flip up and lock

Caution: The outer fluorine sheath of the chemical resistant type sensor head, SH-61R, cannot be cut off with the exclusive stripper.

FUNCTIONS

Nine advanced functions for versatile sensing

- Sensitivity for detection of minute differences can be set by the push of one button without the presence of an object.
- ② Sensitivity shift All models The set threshold level can be shifted from the center towards either ON or OFF level.
- ③ Remote sensitivity selection SU-79 The amplifier stores four channels of sensitivity levels. They can be selected by the remote inputs.
- 4 Remote sensitivity setting SU-77 The sensitivity level can be adjusted from a remote place.
- **⑤ External synchronization SU-75** The timing for sensing can be

- ① Limit sensitivity setting All models ⑥ Test input (emission halt) SU-75 Convenient for start-up inspection.
 - Sensitivity margin indication All models The number of blinks of the stability indicator indicates the degree of the sensitivity margin.
 - ® ON-delay/OFF-delay timer SU-7 SU-77 SU-79 SU-7J

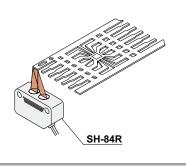

The timer can be selected for either ON-delay or OFF-delay of 0 to 5 sec.

(9) Interference prevention All models Two sensor heads can be mounted close together.

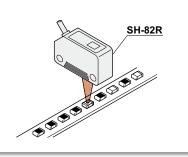

Refer to "PRECAUTIONS FOR PROPER USE an external input. (p.387~)" for further details.

APPLICATIONS

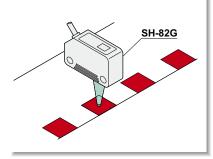

Positioning of a lead frame

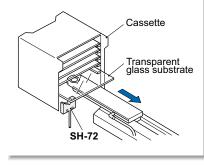

Identifying top face from bottom face of chip components

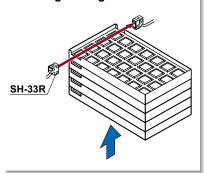

Detecting red mark on white paper

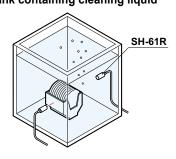

Detecting transparent glass substrates in cassette

Detecting IC height

Detecting wafer cassette in quartz tank containing cleaning liquid

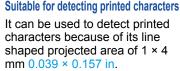

VARIETIES

(e.g.) Detecting polarity

marks on capacitors

Line-focus type

SH-84R

Strong against position deviation

Since it makes a judgment based upon the total light incident on the sensing area, it is not easily affected by a deviation in sensing object position.

Glass substrate detection type

SH-72

Its unique optical system enables detection of transparent glass plate, as well as, specular film deposited glass plate at the same distance.

No dead zone Repeatability: 0.03 mm 0.001 in Not affected by background

Spot size 1 × 4 mm

Pinpoint type with green LED beam SH-82G

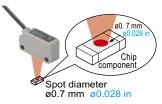

Red/white color discrimination

Discrimination between red/white, red/yellow or red/orange, which is difficult with the red LED type, is easy with SH-82G.

Pinpoint type with red LED beam

Top/bottom face of a chip component can be easily discriminated.

Ultra-slim type

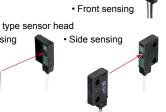

Compact size: 0.3 cm³ Thickness: 3 mm 0.118 in

Versatile mounting

Diffuse reflective type sensor head

SH-2□

Ultra-small type

An operation indicator, which enables an easy checking of the operation at site, has been incorporated.

Sensor head with indicator

SH-3□

2 m 6.562 ft long sensing range with red LED beam (SH-33R)

Visible red I ED heam makes alignment easy.

ORDER GUIDE

Plug-in connector type

It is usable with the sensor & wire-saving link system S-LINK, sensor block for simple wiring SL-BMW or SL-BW, or with connector attached cable CN-54-C2 or CN-54-C5.

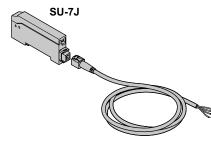

Sensor & wire-saving link system S-LINK

(Refer to our website for details.)

Sensor block for simple wiring SL-BMW, SL-BW

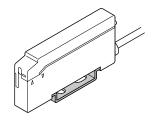

(Refer to p.1015~ for details.)

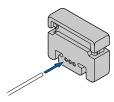

Connector attached cable **CN-54-C2** (2 m 6.562 ft long) **CN-54-C5** (5 m 16.404 ft long)

Accessories

• MS-DIN-2 (Amplifier mounting bracket)

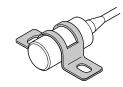

• SU-CT1 (Exclusive stripper)

• MS-SH6-1

(Sensor head mounting bracket for SH-61R)

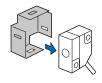

OPTIONS

Designation	Model No.	Description							
		This is a convenient slit mask having four types of slit masks.

Sensor head mounting bracket (For the ultra- small type only)	MS-SS3-1	Mounting bracket for the ultra-small sensor head (The thru-beam type sensor head needs two brackets)							
Sensor head mounting bracket / For the mark sensor only MS-DS-1 Mounting bracket for the		ounting bracket for the mark sensor head							
Sensor head mounting bracket (For SH-61R only) MS-SH6-2 The emitter and the receiver are fixed together at an angle as a convergent reflective type sensor.			r at an ang	le for use					
Sensor checker (Note)	CHX-SC2	It is useful for beam alignment of thru-beam type sensors. The optimum receiver position is given by indicators, as well as an audio signal.							

Note: Refer to p.959~ for the sensor checker CHX-SC2.

Slit mask

· OS-SS3

The sensor head and the slit mask are mounted

Sensor head mounting bracket

• MS-SS3-1

Two M3 (length 12 mm 0.472 in) screws with washers are attached.

• MS-DS-1

Two M3 (length 14 mm 551 in) screws with washers are attached.

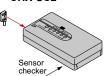

• MS-SH6-2

No screw is attached.

Thru-beam type

Thru-beam type

SH-31G

Thru-beam type

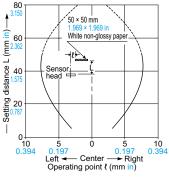

SH-33R

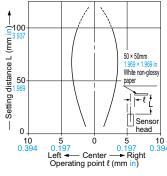

SH-22 Diffuse reflective type

Sensing field

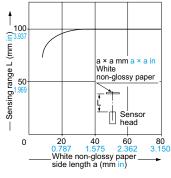

Correlation between sensing object size and sensing range

Mark sensor

Mark sensor

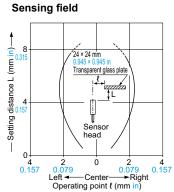

As the sensing object size becomes smaller than the standard size (white non-glossy paper 50 × 50 mm 1.969 × 1.969 in), the sensing range shortens, as shown in the left graph.

Diffuse reflective type

For plotting the left graph, the sensitivity has been set such that a 50 × 50 mm 1.969 × 1.969 in white non-glossy paper is just detectable at a distance of 100 mm 3.937 in.

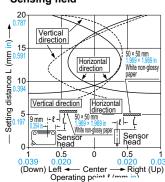

Mark sensor

SH-84R Sensing field

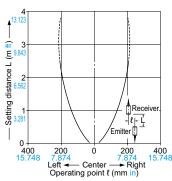

Downloaded From Oneyac.com

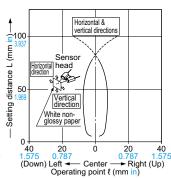

SENSING CHARACTERISTICS (TYPICAL)

SH-61R Chemical resistant type

Parallel deviation

Sensing field with optional mounting bracket (MS-SH6-2)

PRECAUTIONS FOR PROPER USE

Refer to p.1552~ for general precautions.

Sensor head

<u>∧</u>

 Never use this product as a sensing device for personnel protection.

 In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

 Always use the sensor head and the exclusive amplifier together as a set.

Mounting

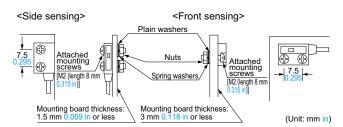

Ultra-slim type

· With tapped screws

The tightening torque should be 0.14 N·m or less.

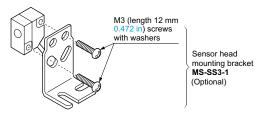

• With attached screws and nuts

The tightening torque should be 0.14N m or less.

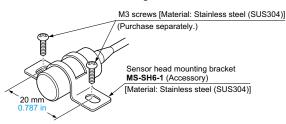

For ultra-small type, mark sensor & glass substrate detection sensor

 \bullet The tightening torque should be 0.29 N·m or less when mounting the sensor head with the screws.

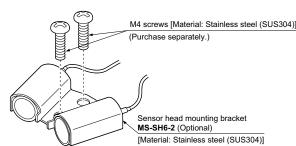

Chemical resistant type

 Use M3 screws to mount the sensor head with the attached sensor head mounting bracket.

 Use M4 screws to assemble the sensor head with the optional sensor head mounting bracket MS-SH6-2, in order to form the convergent sensing mode.

In case of chemical resistant type sensor head

- Do not use where it can be exposed to molten alkali metals (sodium, potassium, lithium, etc.), fluorine gas (F2), CIF3, OF2 (including gaseous state), etc.
- In case of cable extension, the extended portion should be placed in an area where it is not exposed to chemicals.

PRECAUTIONS FOR PROPER USE

Refer to p.1552~ for general precautions.

Amplifier

Wiring

 The self-diagnosis output does not incorporate a shortcircuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

Sensitivity setting

Normal sensitivity setting

Standard setting

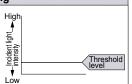

The sensor recognizes the ON (object present) and OFF (object absent) levels by your pressing of the buttons. The threshold level is automatically set at the middle between ON and OFF levels.

Maximum sensitivity setting

Full power setting

The maximum sensitivity is set. Take care that, in case of the diffuse reflective type, if a background object is present, the sensing output may turn ON even without the sensing object.

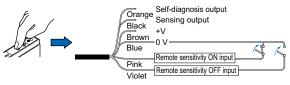

*How to set sensitivity with external inputs

Remote sensitivity setting (SU-77 only)

Instead of pressing buttons, the sensitivity can be set with the remote sensitivity setting inputs. (There is no external sensitivity shift mode.)

Setting procedure

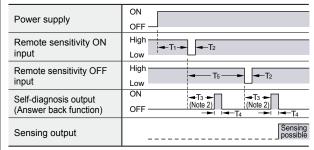

The procedure is the same as for setting with sensitivity buttons, except that instead of pressing the buttons, the remote sensitivity setting input wire is shortcircuited to 0 V. The mode selection switch is set to either the "SET" or "RUN" side.

Time chart

The self-diagnosis output stays ON for 40 ms approx. after ON input or OFF input is recognized by the sensor.

If the difference between the ON and OFF levels (the difference between incident light levels) is so small that stable detection is not possible, it does not turn ON.

 $T_1 \ge 1,000 \text{ ms}, 3,000 \text{ ms} > T_2 \ge 5 \text{ ms}, T_3 \approx 310 \text{ ms}, T_4 \approx 40 \text{ ms}, T_5 \ge 500 \text{ ms}$ Notes: 1) Signal condition ... Low: 0 to 1 V, High: 4.5 to 30 V, or open Input impedance: 10 k Ω 2) Do not move the object, etc., or change the incident light intensity during T3.

Sensitivity for detecting minute differences

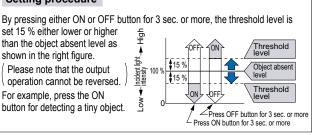

Limit sensitivity setting

Setting for minute detection is possible just by pressing a button once without the object being present.

Setting procedure

set 15 % either lower or higher than the object absent level as shown in the right figure. Please note that the output operation cannot be reversed. For example, press the ON

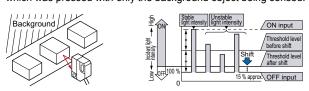

For applications in which beam intensity fluctuates

Sensitivity shift

If the incident light is stable in either the object present or object absent state, by shifting the threshold level towards this state, stable sensing is possible even if the incident light is unstable in the other state. The setting level is the same as for limit sensitivity setting. However, since the operating level is shifted after the normal sensitivity setting, output operation is selectable.

Setting procedure

Press the sensitivity setting button which was pressed in the stable light received condition. For example, for a diffuse reflective type sensor, in case a background object is present, press the button which was pressed with only the background object being sensed.

Remote sensitivity selection function (SU-79 only)

• SU-79 can store four channels of sensitivity levels, which can be selected as per your requirement. Designate the channel that is to store the sensitivity by making the remote sensitivity selection inputs 1 and 2 suitably High or Low.

Signal condition

Low: 0 to 1 V High: 4.5 to 30 V, or open Input impedance: 10 kΩ

Channel selection

Input Channel	Remote sensitivity selection input 1	Remote sensitivity selection input 2
1	Low	Low
2	Low	High
3	High	Low
4	High	High

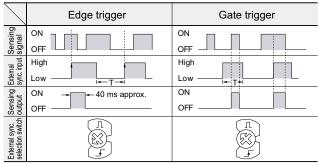

PRECAUTIONS FOR PROPER USE

Refer to p.1552~ for general precautions.

Amplifier

External synchronization function (SU-75 only)

 The external synchronization function can be used to control the timing of sensing. Edge trigger or gate trigger are available.

 $T \ge 0.6$ ms ($T \ge 0.8$ ms when the interference prevention function is used) Note: The external synchronization selection switch must be turned fully clockwise or counterclockwise.

Test input (emission halt) function (SU-75 only)

When the test input (emission halt input) (violet) is short-circuited to 0 V (Low), the beam emission is halted. This function is useful for a start-up test since the sensing output can be made ON/OFF without the sensing object. Short-circuit to 0 V and open the input, repeatedly. If the sensing output follows this operation, the sensor is working well, else not.

Timer function (Excluding SU-75)

 Every SU-7 series amplifier (excluding SU-75) is incorporated with a variable ON/OFF delay timer for 0 to 5 sec.

ON-delay

As only longer signals are extracted, this function is useful for detecting if a line is clogged, or for sensing only objects taking a long time to travel.

OFF-delay

Since the output signal is extended for a fixed time interval, this function is useful if the output signal is so short that the connected device cannot respond.

Timer period: T = 0 to 5 sec.

· Timer period setting

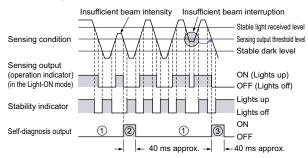

Adjust the time duration of ON or OFF delay by turning the timer adjuster.

Note: Adjust the timer under "SET" mode. Adjustment is not allowed in "SIF" or "RUN" mode.

Self-diagnosis function

 The sensor checks the incident light intensity, and if it is reduced due to dirt or dust, or beam misalignment, an output is generated.

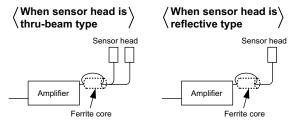

- ① The self-diagnosis output transistor stays in the "OFF" state during stable sensing.
- ② When the sensing output changes, if the incident light intensity does not reach the stable light received level or the stable dark level, the self-diagnosis output becomes ON. It is automatically restored after 40 ms approx. Further, the self-diagnosis output changes state when the sensing output changes from Light to Dark state. (It is not affected by the output operation of the sensing output.)
- ③ In case of insufficient beam interruption, there will be a time lag before the self-diagnosis output turns ON.

Use conditions to comply with CE Marking (SH-3□ only)

 Following work must be done in cace of using this product as a CE marking (European standard EMC Directive) conforming product.

Place ferrite core at the sensor cable.

Place a ferrite core near the amplifier.

In that condition, the sensor head cable should be single-winding. Prepare 1 pc. of the following recommended ferrite core (or an

equivalent product.)
<Recommended product>

ESD-SR-110 [NEC TOKIN Corporation]

Others

• Do not use during the initial transient time (0.5 sec.) after the power supply is switched on.
