High breakdown voltage type
is available (1.5 kV between
open contacts)

TX-D RELAYS

RoHS compliant

FEATURES

- ! 1. Lineup now includes high breakdown voltage type that achieves breakdown voltage between open contacts of 1,500 V AC.

Surge breakdown voltage between open contacts:
1,500 V $10 \times 160 \mu\text{sec}$. (FCC part 68)
Surge breakdown voltage between contact and coil:
6,000 V $1.2 \times 50 \mu\text{sec}$. (EN60950)

2. **Approved to the supplementary insulation class in the EN standards (EN60950).**

The insulation distance between the contact and coil meet the supplementary insulation class of the EN60950 standards as required for equipment connected to the telephone lines in Europe.

Satisfies the following conditions:

- Clearances: 2.0 mm .079 inch or more
- Creepage distance: 2.5 mm .098 inch or more

- ! 3. **3,000 V breakdown voltage between contact and coil. (Surge breakdown voltage 6,000 V type)**

The body block construction of the coil that is sealed formation offers a high breakdown voltage of 3,000 V between contact and coil.

4. **Nominal operating power: High sensitivity of 200mW**

By using the highly efficient polar magnetic circuit "seesaw balance mechanism", a nominal operating power of 200 mW has been achieved.

5. **High contact capacity: 2 A 30 V DC**

6. **High contact reliability achieved with gold-clad crossbar twin contacts and the use of gas expelling materials during formation.**

*We also offer a range of products with AgPd contacts suitable for use in low level load analog circuits (Max. 10V DC 10 mA).

7. **Outstanding vibration and shock resistance.**

Functional shock resistance: 750 m/s²

Destructive shock resistance:
1,000 m/s²

Functional vibration resistance:

10 to 55 Hz (at double amplitude of 3.3 mm .130 inch)

Destructive vibration resistance:

10 to 55 Hz (at double amplitude of 5 mm .197 inch)

8. **Sealed construction allows automatic washing.**

9. **A range of surface-mount types is also available.**

Notes: *1 M.B.B. type models are only available in 2,500 V surge breakdown voltage type.

*2 This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load. (AgPd contact type is available for low level load switching [10V DC, 10mA max. level])

*3 The upper operation ambient temperature limit is the maximum temperature that can satisfy the coil temperature rise value. Refer to [6] AMBIENT ENVIRONMENT in GENERAL APPLICATION GUIDELINES (Page 24).

NOTES

1. Packing style

1) Tube packing

The relay is packed in a tube with the relay orientation mark on the left side, as shown in the figure below.

2) Tape and reel packing (surface-mount terminal type)

(1) Tape dimensions

(i) SA type

(ii) SS type

(2) Dimensions of plastic reel

3) Ambient temperature when transporting and during storage with the product in its original packaging:
-40 to +70°C -40 to +158°F

2. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.

Chucking pressure in the direction A:

4.9 N {500gf} or less

Chucking pressure in the direction B:

9.8 N {1 kgf} or less

Chucking pressure in the direction C:

9.8 N {1 kgf} or less

Please chuck the portion.

Avoid chucking the center of the relay. In addition, excessive chucking pressure to the pinpoint of the relay should be avoided.

3. M.B.B. type

A small OFF time may be generated by the contact bounce during contact switching. Check the actual circuit carefully.

If the relay is dropped accidentally, check the appearance and characteristics including M.B.B. time before use.

Measuring condition of M.B.B. time

For general cautions for use, please refer to the "Cautions for use of Signal Relays" or "General Application Guidelines".
