## NOTES

### 1. Mounting and cleaning conditions for SMT type relays

1) Recommended reflow condition is:

- Reflow-soldering temperature profile condition (IRS method)

T<sub>1</sub> = 150 to 180°C 302 to 356°F  
 T<sub>2</sub> = 230°C 446°F or more  
 T<sub>3</sub> = Less than 260°C 500°F  
 t<sub>1</sub> = 60 to 120 sec.  
 t<sub>2</sub> = Less than 40 sec.

#### • Cautions for mounting operations

Temperature profile indicates the temperature of the soldered part (\*1) of terminals on the surface of a circuit board. The exterior temperature of a relay may be extremely high depending on the component density on the board or the heating method of the reflow oven or circuit board type. Sufficient verification under actual processing conditions is required.

2) Avoid cleaning (ultrasonic cleaning, boiling cleaning, etc.) and coating in order to prevent negative impacts on relay characteristics.

### 2. Storage condition after opening a moisture-prevention package

- 1) After opening a moisture-prevention package, use the item as soon as possible (within 3 days under an environment of Max. 30°C 86°F, Max. 70% RH).
- 2) If products are not used within 4 days after opening a moisture-prevention package, store them in a humidity-controlled desiccator or in a storage bag with silica gel.
