

Amplifier Built-in Ultra-minute Photoelectric Sensor

The World's No. 1 in Compactness

* Among photoelectric sensors with built-in amplifier, as of June 2015 (survey by our company)

(Actual size)

EX-Z SERIES

Ultra-minute Photoelectric Sensor Amplifier Built-in

The World's Smallest* Size

* Among photoelectric sensors with built-in amplifier, as of June 2015 (survey by our company)

Unit volume ratio reduced by about 50%*

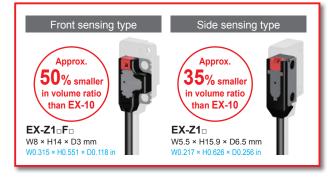

* As compared to EX-10 series

The world's thinnest* sensor dimension of 3 mm 0.118 in has been achieved by utilizing new semiconductor packaging technology that does not use wire bonding. The small unit size allows installation of sensors in a narrow space where only a conventional fiber sensor head could be installed before. The built-in amplifier also saves on installation space.

* Among photoelectric sensors with built-in amplifier, as of June 2015 (survey by our company)

EX-Z13

Sensing range: 500 mm 19.685 in Repeatability: 0.05 mm 0.002 in or less Minimum sensing object: ø1.0 mm ø0.039 in opaque object

EX-Z12

Sensing range: 200 mm 7.874 in Repeatability: 0.03 mm 0.001 in or less Minimum sensing object: ø0.5 mm ø0.020 in opaque object

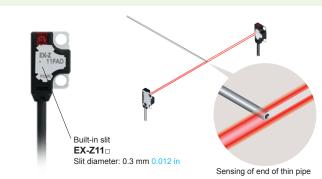

EX-Z11

Sensing range: 50 mm 1.969 in Repeatability: 0.02 mm 0.001 in or less Minimum sensing object: ø0.3 mm ø0.012 in opaque object

Small-object sensing capability

Capable of sensing an extremely small ø0.3 mm ø0.012 in object without slit EX-Z11

A slit is provided on the front side of the main sensor body. The sensor can detect a Ø0.3 mm Ø0.012 in object (the smallest-object sensing capability in the industry*) without using an optional slit. * Among photoelectric sensors with built-in amplifier, as of June 2015 (survey by our company)

Capability to sense a small ø1.0 mm o0.039 in object over long distance EX-Z13

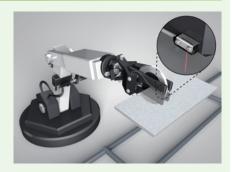

The high-brightness 4-element red LED provides strong light emission stably over a long period of time. In spite of the extremely small size, both front sensing and side sensing units can sense a small $\emptyset 1.0 \text{ mm } \emptyset 0.039 \text{ in object from a long distance of 500 mm}$ 19.685 in. Since the spotlight is clearly visible, the sensing position can be easily confirmed.

> Clearly visible spotlight

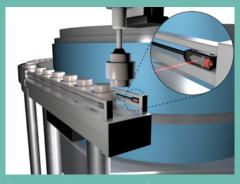

A wide range of applications

Inflection resistant cable type available for all models

Inflection resistant cable type with improved flex resistance is available for all models. Select the model suitable for your specific application. The standard type comes with lead wires with the same diameter as previous models, but the outside diameter of the cable is 2.0 mm 0.079 in and thinner than the cables of the EX-10 series. This facilitates cable routing.

Examples of applications

Detection of parts in parts feeder

IP67 protective structure

The sensors features an IP67 protective structure to allow their use in process lines where water is used or splashed.

Rust-resistant stainless steel sensor mounting brackets and screws are available.

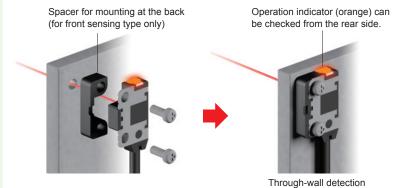

Note: If water splashes on the sensor during sensing operation, it may sense water as an object.

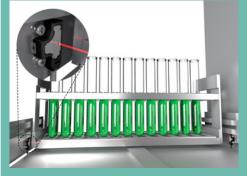

Options

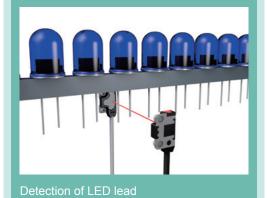

A variety of mounting brackets are available!

A spacer for mounting at the back (1 type) for through-wall sensing and sensor mounting brackets (3 types) are available to meet a diversity of sensor installation needs.

tube tray

ORDER GUIDE

Accessories			M2 mounting screws: 1 set (front sensing type: 6 mm 0.236 in in length; side sensing type: 10 mm 0.394 in in length)							

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23°C 73°F.

2) Model Nos. having the "-P" are PNP output type and model Nos. having the "-R" are inflection resistant cable type.

3) The inflection resistant cable type has a 0.1 mm² 3-core (thru-beam type emitter: 2-core) flexible cabtyre cable, 2 m 6.562 ft long.

PRECAUTIONS FOR PROPER USE

· Never use this product as a sensing device for personnel protection.

. In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

.

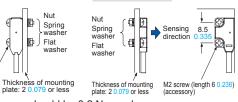

• In case of mounting on tapped holes (Unit: mm in)

The tightening torque should be 0.2 N·m or less.

Other

• Do not use during the initial transient time (0.5 sec. approx.) after the power supply is switched on.

The tightening torque should be 0.2 N·m or less.

İB-Flat

• In case of using attached screws and nuts (Unit: mm in)
