

[Quality characteristic	s]						
Test item	Test condition	Judgment criteria					
High temperature	+85degC, 1000h	No abnormality shall					
Low temperature	-40degC, 1000h	be observed in appearance or					
High-temperature high-humidity storage	+60degC, 90%RH, 1000h	electrical characteristics.					
Pressure Pot	+121degC, 99%RH, 2.026x10 ⁵ Pa, 100h	characteristics.					
Temperature cycling	-40…+85degC, Each 30 min., 200cy						
Vibration	10500Hz, 10G, in each direction of XYZ, 2h30min.						
Impact	100G, 6mS, Half sinusoidal wave, in each direction of XYZ, 3 times						
Shock (Drop)	1.8m, 6 facesx6cy(36 times with 100g Dummy Load)						
Electro static discharge	200pF, 0 ohm, +/-200V, Each 5 times						
Soldering heat resistance	Manual hot gas: 260+/-10degC, 30 sec., 2 times	Over 90% of the terminal					
	Soldering iron: 260+/-10degC, 3 sec., 2 times	surface shall be covered with solder.					
	Reflow: 260degC peak, 2 times						
Solder ability	Solder bath: 235+/-5degC, 2 sec.	Over 95% of the terminal surface shall be covered					
	Reflow: 230degC						
Board warping	There should not be any cracks in the component or solder joints, no abnormality in electrical characteristics.						
Terminal removal	Terminal removal Solder a component on a PC board using the recommended then press the component sideways at 1mm/sec. Destruction line						
Seating plane co-planarity							
< Recommended sold Diagram1 Shown b degC 250 230 200 170 140	lering condition > below is a recommended reflow soldering condition	n.

[Cautions for use]

- (1) Operating a product over the maximum rating for even a moment may result in a product failure or breakage. Never use a product in such a condition that it may cause a safety problem.
- (2) Opening or short-circuiting the product terminals or inserting a product in the reverse orientation while power is being supplied may cause a breakage. Always avoid such circumstances.
- (3) Operations in a corrosive gas atmosphere or improper environments such as hightemperature, high-humidity or dewy conditions may lead to product performance deterioration, a breakage, a change in appearance etc. Please avoid such conditions, as they are unsafe.
- (4) Always ground the soldering iron or soldering bath used for assembly operation to avoid any excessive voltage applied to a product.
- (5) After soldering with solder bridges, incomplete soldering or in the reverse orientation, supplying power may result in a product breakage. Please confirm the soldered condition before supplying power to the product.
- (6) Excessive stress on the terminals may cause a contact failure or performance deterioration. Please use caution.
- (7) Please provide a fail-safe provision in the product you design by taking any failure of our product into consideration.
- (8) This product does not include a DC-cutting device. Application of a DC voltage between the Balance port and the Unbalance port may cause product deterioration or breakage.
 - * If any question arises about the safety of this product, please contact us immediately with a request for an engineering examination.

[Remarks]

- *1: All of the materials used in this product are those listed as the existing chemical substances based on the "Law for examination and regulation of manufacture of chemical substances".
- *2: The production process of this product does not use any ozone-depleting chemicals (OZC) regulated by the Montreal Protocol.
- *3: Validity of this specification is 5 years from the date of issue, but the validity is considered on going unless any changes are made.
