

6 Watt P1dB, 800 MHz to 960 MHz, High Power Amplifier,
SMA Input, SMA Output, 37 dB Gain, 50 dBm IP3, 3 dB NF

TECHNICAL DATA SHEET

PE15A5041

The PE15A5041 is a 6 W typical high gain power coaxial amplifier operating in the 860 to 960 MHz frequency range. The amplifier offers 6 Watts typ of P1dB power and a high 37 dB typical small signal gain with the gain flatness of ± 1.25 dB max. The amplifier requires typically a +12V DC power supply. The connectorized SMA module is unconditionally stable and operates over the temperature range of -45°C and +65°C.

Features

- 800 to 960 MHz Frequency Range
- Psat 6 Watts typ
- Small Signal Gain: 37 dB typ
- Gain Flatness ± 1.25 dB max
- 50 Ohms Input and Output Matched
- Unconditionally Stable
- Regulated Supply

Applications

- Military Radio
- Communication Systems
- High Gain Driver Power Amplifier
- High Gain Output Power Amplifier

Electrical Specifications (TA = +25°C, DC Voltage = 12Volts, DC Current = 1.8A)

Description	Minimum	Typical	Maximum	Units
Frequency Range	800		960	MHz
Small Signal Gain	34	37	40	dB
Gain Flatness		± 1	± 1.25	dB
Gain Variation at OTR*		± 1.5	2	dB
Output Power at 1 dB Compression Point	+37.5	+38		dBm
Output 3rd Intercept Point	+45	+50		dBm
Reverse Isolation	45	55		dB
Noise Figure		3	4	dB
Spurious			-60	dBc
Impedance (Input)		50		Ohms
Impedance (Output)		50		Ohms
Input VSWR		1.5:1	1.8:1	
Output VSWR		1.5:1	1.8:1	
Operating DC Voltage	11.5	12	13	Volts
Operating DC Current		1.8	2.1	A
Operating Temperature Range	-40		+65	°C

*OTR= Base Plate Operating Temperature Range

Absolute Maximum Rating

Parameter	Rating	Units
Source Voltage	+13	Volts
RF input Power	+15	dBm
Maximum Load VSWR	3:1	
Storage Temperature	-55 to +125	°C
Operating Temperature (base-plate)	-45 to +65	°C

ESD Sensitive Material,
Transport material in
Approved ESD bags.
Handle only in approved
ESD Workstation.

Mechanical Specifications

Size

Length	2.08 in [52.83 mm]
Width	1.45 in [36.83 mm]
Height	0.5 in [12.7 mm]
Weight	0.119 lbs [53.98 g]
Input Connector	SMA Female
Output Connector	SMA Female

Environmental Specifications

Temperature

Operating Range	-40 to +65 deg C

Amplifier Power-up Precautions

- 1.) Confirm that proper ESD precautions and controls are always in place before handling any Amplifier module.
- 2.) Confirm adequate thermal management is in place to effectively dissipate heat away from the Amplifier package. The Amplifier operational baseplate temperature must be within the operational temperature range stated in the Amplifier datasheet. Depending on the design and thermal requirements, using a heatsink with cooling fan is always recommended for safe reliable operation. A heat sink without a cooling fan may also be used. Damage caused from overheating will void the warranty.
- 3.) Confirm adequate system grounding is established. The DC power supply and Amplifier must have a common ground in order to operate properly.
- 4.) Power Amplifiers may require additional DC Current when initially powered-up. Depending on the design, the input current draw could range from an additional 10% to 100% above the maximum rated DC current of the Amplifier. This varies based on product part number.
- 5.) Confirm the DC power supply, if limited, is set to allow for additional start-up current that's rated for the Power Amplifier.
- 6.) Confirm the system is designed and calibrated for 50 ohms. Any impedance mismatch may cause performance issues.
- 7.) Perform a CALIBRATION (if required) with the loads before connecting the Amplifier to the Network Analyzer to ensure proper performance.
- 8.) Use a fixed attenuator between the signal source and input port of the Amplifier to optimize the input VSWR match.
- 9.) Confirm the input power level at the input port of the amplifier does not exceed the maximum rated limit for input power (as stated in the Amplifier datasheet).
 P_{in} for Small Signal Gain = P1dB-SSG-10 dB
 P_{in} for P1dB = P1dB-SSG+1 dB
- 10.) Confirm the Network Analyzer is always connected to the Amplifier first before DC power is applied to the Amplifier.
- 11.) As long as the input and output ports of the amplifier are connected to a 50Ohm load and RF signal power is applied, the Amplifier can be powered up with DC voltage.
- 12.) Confirm the Amplifier output load is matched for a 50 Ohm impedance and will not exceed the maximum rated VSWR or Return Loss limit for the Amplifier. Exceeding the maximum rated VSWR or Return Loss limit will result in reflected signal power that could damage the Amplifier and void the warranty.
- 13.) **Power Amplifier connected to an Antenna for signal transmission** - It's strongly recommended to use a high power fixed attenuator pad or an Isolator between the output port of the Amplifier and input port to the antenna. Any reflected signal power due to impedance mismatch will likely damage the Amplifier and void the warranty.
- 14.) The attenuator or isolator used at the output port of the Amplifier must be rated to handle the output power level and operational frequency band of the amplifier.
