

PR2 Relay Base for: – Industrial DPDT or 4PDT Relays

Universal Modular System

The 27 mm* (1.063 in.) wide PR2 relay base range is a modular system consisting of PR2-B... relay bases, robust REL-IR... electromechanical industrial relays with DPDT and 4PDT contacts, and a comprehensive range of accessories. These include:

- Plug-in input/interference suppression modules
- Relay retaining bracket with labeling field and eject function
- Labels
- Continuous jumpers

Depending on the application, complete coupling relays can be created, which are optimized in terms of cost and function.

Base Versions

The relay bases are available in three versions - the flat 2/2 level PR2-BSC2 type with screw connections, and the "logical" 1/3 level PR2-BSC3 with screw connections and PR2-BSP3 with spring-cage connections. The logical versions have coil and contact connections that are located opposite one another and thus meet the requirements of modern control cabinet concepts with clear isolation of control signals and load.

Robust, Cost-Effective Industrial Relays

Industrial relays are used in many sectors of industry due to their robust structure, which has 2.6 mm (0.102 in.) flat pins. The main features of the REL/IR... series include the fully automated manufacture of products in conjunction with the high degree of product stability and global availability. The following versions are available:

- With two 10 A 2PDT contacts
- With four 5 A 4PDT contacts
- In all popular AC and DC coil voltages

Considerably wider and more expensive miniature contactors can thus be replaced cost-effectively in many applications without adversely affecting machine or system operation. All industrial relays have the following standard features:

- Manual test key (AC coil = red key, DC coil = blue key)
- Mechanical switch setting display
- LED status indicators
- Free-wheeling diode (only DC types)
- Power contacts with solid gold coating (only types with 4PDT contacts)

*) Spring-cage version is 31 mm (1.220 in.) wide
