## Description

The ILB IB 24 DO16-DSUB module is designed for use within an INTERBUS network. It is used to output digital signals.

### INTERBUS Features

- Remote bus connection via D-SUB connector
- 500 kbps transmission speed
- Diagnostic and status indicators

### Output Features

- Connections for 16 digital actuators
- Connection of actuators in 2 and 3-wire technology
- Nominal current per output: 0.5 A
- Total current of all outputs: 8 A
- Short-circuit and overload protected outputs
- Diagnostic and status indicators

Please refer to the "Mounting and Removing Inline Block IO Modules" application note (see "Ordering Data" on page 2).

Make sure you always use the latest documentation.

**24 V Module Supply (Communications Power and Actuator Supply; U<sub>L</sub> and U<sub>A</sub>)**

Nominal value	24 V DC
Tolerance	- 15%/+ 20% according to EN 61131-2
Ripple	±5% according to EN 61131-2
Permissible range	19.2 V DC to 30.0 V DC
Current consumption at U <sub>L</sub>	70 mA
Current consumption at U <sub>A1</sub> and U <sub>A2</sub>	8 A
Safety equipment for communications power	Surge protection and protection against polarity reversal
Safety equipment for actuator supply	Surge protection
Connection	Via MINI-COMBICON connector

**Digital Outputs**

Number	16
Connection method for actuators	2 and 3-wire technology
Nominal output voltage U <sub>OUT</sub>	24 V DC
Differential voltage at I <sub>nom</sub>	≤ 1 V
Nominal current I <sub>nom</sub> per channel	0.5 A
Total current	2 x 4 A
Protection	Short-circuit and overload protection
Nominal load	
Ohmic	48 Ω / 12 W
Lamp	12 W
Inductive	12 VA (1.2 H, 50 Ω)
Switching frequency with nominal inductive load	0.5 Hz (1.2 H, 50 Ω), maximum
Overload response	Auto restart
Response with inductive overload	Output may be damaged
Reverse voltage protection against short pulses	Protected against reverse voltages
Resistance to permanently applied reverse voltages	Protected against reverse voltages, permissible current 2 A, maximum
Validity of output data after connecting the 24 V voltage supply (power up)	1 ms, typical
Response upon power down	The output follows the supply voltage without delay.
Limitation of the voltage induced on circuit interruption	-41.0 V
One-time unsolicited energy	1 J, maximum
Protective circuit type	Integrated free running circuit in the output chip
Overcurrent shutdown	0.7 A, minimum
Maximum output current when switched off	10 μA

When not loaded, a voltage can be measured even at an output that is not set.

**Typical Power Dissipation With 24 V Supply Voltage**

**Formula to Calculate the Power Dissipation of the Electronics**

$P_{TOT} = 1.68 \text{ W} + \sum_{i=1}^n (0.11 \text{ W} + I_{Li}^2 \times 0.28 \text{ } \Omega)$	Where P <sub>TOT</sub> Total power dissipation of the module i Continuous index n Number of set outputs (n = 1 to 16) I <sub>Li</sub> Load current of output i
---	--

**Limitation of Simultaneity, Derating**

Ambient Temperature (TA)	Maximum Load Current (I) at 100% Simultaneity	Maximum Load Current (I) at 50% Simultaneity
-25°C to +45°C	16 x 0.5 A	8 x 0.5 A
+46°C to +60°C	$I_{tot} = 8 \text{ A} - ((TA - 45^\circ\text{C}) \times 0.267 \text{ A}/^\circ\text{C})$	8 x 0.5 A

With an ambient operating temperature of up to 45°C and 100% simultaneity, a load current of 0.5 A per channel is permissible.

If all four channels are used at a temperature of > 45°C, the permissible working point must be defined according to the above formula. An example can be found in the "Configuring and Installing the INTERBUS Inline Product Range" user manual IB IL SYS PRO UM E.

### Local Diagnostic and Status Indicators

Figure 3 Diagnostic and status indicators of the ILB IB 24 DO16-DSUB module

Designation	Color	Meaning
<b>BUS</b>		
<b>UL</b>	Green	Communications power
<b>RC</b>	Green	Remote bus cable check
<b>BA</b>	Green	Bus active
<b>RD</b>	Yellow	Outgoing remote bus disabled
<b>PWR</b>		
<b>UA1</b>	Green	Actuator supply 1 (connector 5 and connector 6 for actuators)
<b>UA2</b>	Green	Actuator supply 2 (connector 7 and connector 8 for actuators)
<b>OUT</b>		
<b>E</b>	Red	Short circuit or overload at one of the outputs
<b>1 to 4</b>	Yellow	Status indicators of the outputs

If the error LED (E) of a group of eight outputs lights up (e.g., connector 5 and connector 6), this indicates that a short circuit or overload is present at one or more of the outputs in this group.

### Connecting INTERBUS, the Supply, and Actuators

### Terminal Point Assignment of the MINI COMBICON Connectors for the Connection of the Supply Voltages (Connectors X1 and X2 in Figure 4 on page 8)

Figure 4 Terminal point assignment of the connectors

Terminal Point	Assignment
UL	24 V communications power $U_L$
UA1	24 V actuator supply $U_{A1}$
UA2	24 V actuator supply $U_{A2}$
NC	Not used

Terminal Point	Assignment
0V	GND
0V	GND
0V	GND
NC	Not used
FE	Functional earth ground

The terminal points for GND (0V) can have a total current of 8 A per terminal point. The maximum current carrying capacity of 8 A must not be exceeded. If the total output current in your application is > 8 A, the module is to be supplied via a minimum of two GND terminal points (0V).

The supply points have the same ground potential. All ground supplies on a module are electrically connected with one another. The communications power is also electrically connected via all contacts. In this way it can supply all potentials with just one supply without the need for additional terminals, see "Connection example" on page 10.

### Connection Example

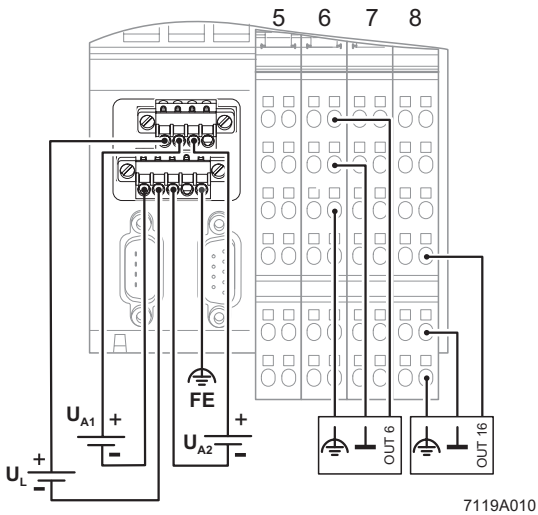

Figure 6 Connection example

The numbers above the module illustration identify the connector slots.

When connecting the actuators observe the assignment of the terminal points to the process data (see "Process Data" on page 11).

The module has an FE spring (metal clip) on the bottom of the electronics base. This spring creates an electrical connection to the DIN rail. Use grounding terminals to connect the DIN rail to protective earth ground. The module is grounded when it is snapped onto the DIN rail.

To ensure reliable functional earth grounding of the module even when the DIN rail is dirty or the metal clip is damaged, Phoenix Contact also recommends grounding the module via one of the FE terminal points.
