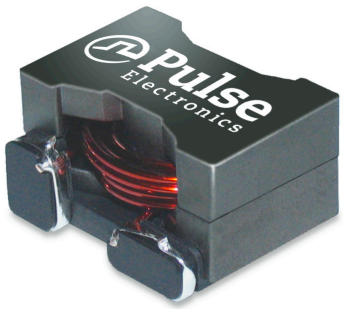
SMT POWER INDUCTORS

Wire Wound - PA2729.XXXNL Series



- ***Height:*** *12.2mm Max*
- ***Footprint:*** *22.2 x 19.1mm Max*
- ***Current Rating:*** *Over 20Apk*
- ***Inductance Range:*** *4.7µH to 60µH*
- *Higher Efficiency Version of PA2050.XXXNL Series in same footprint*

Notes:

1. The rated current as listed is either the saturation current or the heating current depending on which value is lower.
2. The saturation current is the typical current which causes the inductance to drop by 20% at the stated ambient temperatures (25°C and 100°C). This current is determined by placing the component in the specified ambient environment and applying a s hort duration pulse current (to eliminate self-heating effects) to the component.
3. The heating current is the DC current which causes the part temperature to increase by approximately 40°C.
4. In high volt*time applications, additional heating in the component can occur due to core losses in the inductor which may neccessitate derating the current in order to limit the temperature rise of the component. To determine the approximate total losses (or temperature rise) for a given application, the coreloss and temperature rise formula can be used:

   ΔB (Gauss) = K2 * ΔI

   Core Loss (W) = 1.5E-13 * (Freq_kHz) $^{1.63}$ * $\Delta B^{2.62}$
5. The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
