The output current can be adjusted using Rset resistor:

- Disconnect Rset resistor to set full load at 1.4 A / 35 V condition
- Connect Rset resistor to set output current (see below table and curve); for Rset = 6.2 kOhm, the output is full load at 1 A / 50 V condition
- The unit has minimum output current at 0.5 A when the Rset is less than 1 kOhm
- The output voltage is limited by maximum output power (if the output current is set at 1.4 A, the maximum output voltage will be 35 V; if the output current is set at 1 A, the maximum output voltage will be 50 V)

3. Protection

a) Output Short Circuit Protection

The PSU should be protected when the output short and do not result in a fire hazard, shock hazard, or damage to the PSU. The protection is **auto-recovery mode**. The test procedure is setup at LED mode and short V+ to GND, after the fault condition removed, the PSU should be auto-recovery and works normally..

b) Output Over Voltage Protection

When output open condition occurs, the PSU should Clamp output voltage at the Open Load Voltage and not to damage the PSU. The Open Load Voltage can adjust by Rset resistor. After the output is reloaded, the PSU should be works normally. Open Load Voltage is referring from following curve.

c) Protection tables

Protection Specification	Protection Mode	Condition
Output Short Protection	Auto-Recovery	(1) AC turn on then output short (2) Output short then AC turn on
Output Open Protection	Clamp Open Load Voltage (refer to the OVP curve)	(1) AC turn on then output open (2) Output open then AC turn on
AC Transient Protection	Auto-Recovery	120 - 277Vac range switching

4. Dimming Specification

The unit has Analog Dimming (AD) function, using 0-10 Vdc. The typical dimming curve is shown below:
(the current of LED module is 1.043 A at full load condition and V_{out} 50V)

9. Precautions in Handling & Use

- To prevent the LED Driver from any defect, please handle and store it with care
 - Do not drop or give shock
 - Do not store in very humid location or at extreme temperature
 - Do not open or disassemble the product
- Static electricity or surge voltage may damage the components inside LED Driver, as such please observe proper anti-electrostatic working process
 - People handling the Driver should be well grounded (e.g. using ESD wrist band) and wear anti-static working clothes and gloves
 - All related devices and instruments in the production line should be well grounded (e.g. working table, measuring equipment, assembly jigs)
- Observe the correct polarity of output terminal
- Avoid input voltage exceeds the maximum rating, which will cause damage to the circuit and result in malfunction
