## High Performance Digital-Latch TMR Effect Sensor

---

### FEATURES

- Planar TMR-effect sensor ICs
- 3 to 24 V operation
- Automotive-grade ruggedness and fault tolerance
- Extended AEC-Q100 qualification
- Internal protection circuits enable 30V load dump compliance
- Output short-circuit and overvoltage protection
- Operation from  $-40^{\circ}\text{C}$  to  $150^{\circ}\text{C}$  ambient temperature
- High EMC immunity
- Symmetrical latch switch-points
- Choice of output polarity
- Open-drain output
- Solid-state reliability

### APPLICATIONS

- Automotive and industrial safety systems
- Industrial motors/encoders
- Trunk/door/liftgate/wiper motors
- Electronic power steering (EPS)
- Transmission actuators
- Automotive seat/sunroof motors

### DESCRIPTION

The SC2498T families of TMR-effect latches are AEC-Q100 qualified for 24V automotive applications. These sensors are temperature-stable and suited for operation over extended junction temperature ranges up to  $175^{\circ}\text{C}$ . The SC2498T families are available in several different magnetic sensitivities to offer flexible options for system design. They are available in active high and active low variants for ease of integration into electronic subsystems.

The SC2498T features a planar TMR-effect sensing element sensitive to magnetic flux parallel to the face of the IC package.

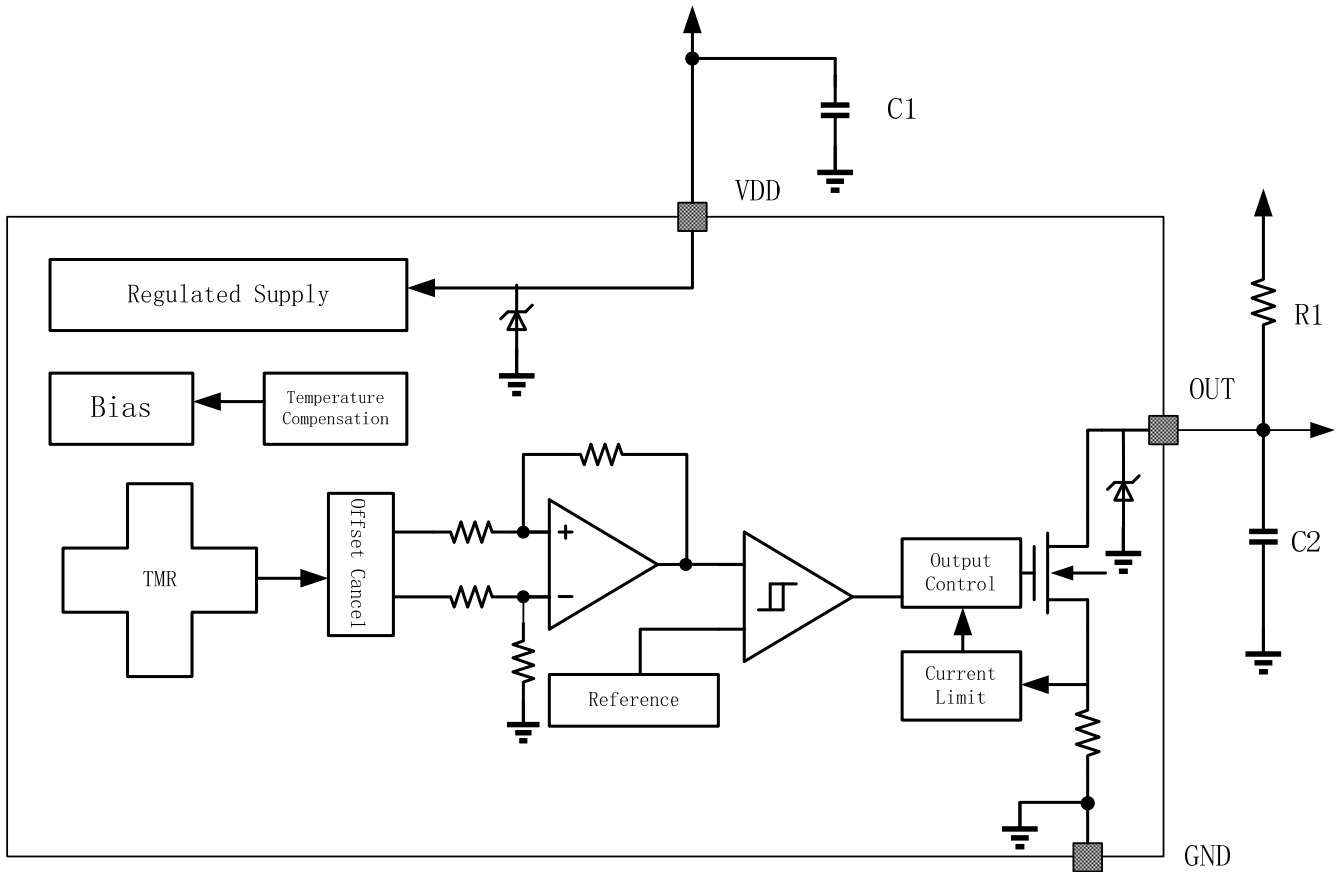

The devices include overvoltage protection for operating directly from an automobile battery, as well as protection from shorts to ground by limiting the output current until the short is removed. The device is especially suited for operation from unregulated supplies.

## BLOCK DIAGRAM.

## ORDERING INFORMATION

Part Number	Packing	Mounting	Ambient, $T_A$	$B_{OP}(Typ.)$	$B_{RP}(Typ.)$
SC2498TSO	3000pieces/reel	3-pin SOT-23	-40°C to 150°C	+3.0mT	-3.0mT
SC2498USO	3000pieces/reel	3-pin SOT-23	-40°C to 150°C	+7.5mT	-7.5mT

## TERMINAL CONFIGURATION

3-Terminal SOT-23  
S0 Package  
(Top View)

Terminal		Type	Description
Name	Number		
VDD	1	PWR	3 to 24V power supply
GND	3	Ground	Ground terminal
OUT	2	Output	Open-drain output. The open drain requires a pull-up resistor.

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

Parameter	Symbol	Min.	Max.	Units
Power supply voltage	V <sub>DD</sub>	-18	33	V
Output terminal voltage	V <sub>OUT</sub>	-0.5	33	V
Output terminal current sink	I <sub>SINK</sub>	0	40	mA
Operating ambient temperature	T <sub>A</sub>	-40	150	°C
Maximum junction temperature	T <sub>J</sub>		175	°C
Storage temperature	T <sub>STG</sub>	-65	175	°C

<sup>(1)</sup> Stresses above those listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ESD PROTECTION

Human Body Model (HBM) tests according to: standard AEC-Q100-002

Parameter	Symbol	Min.	Max.	Units
ESD1-HBM <sup>1)</sup>	V <sub>ESD</sub>	-8	+8	KV
ESD1-HBM <sup>2)</sup>	V <sub>ESD</sub>	-3.5	+3.5	KV

## THERMAL CHARACTERISTICS

Symbol	Parameter	Test Conditions	Rating	Units
R <sub>JA</sub>	SO Package thermal resistance	Single-layer PCB, with copper limited to solder pads	228	°C/W

1) ESD1-HBM use recommended application circuit to test

2) ESD2-HBM use bare chip to test

## OPERATING CHARACTERISTICS

### Electrical Characteristics

over operating free-air temperature range ( $V_{DD} = 5.0V$ , unless otherwise noted)

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
<b>SUPPLY CHARACTERISTICS</b>						
$V_{DD}$	Operating voltage (1)	$T_J < T_J(\text{Max.})$	3	--	24	V
$I_{DD}$	Operating supply current	$V_{DD}=3$ to 24V	3.5	4.1	7	mA
$t_{on}$	Power-on time		--	6	25	$\mu S$
<b>OUTPUT CHARACTERISTICS</b>						
$I_{QL}$	Off-state leakage current	Output Hi-Z	--	--	1	$\mu A$
$V_{SAT}$	Output saturation voltage	$V_{DD}=5V, I_O=20mA$	--	200	500	mV
$t_d$	Output delay time	B=BRP to BOP	--	15	25	$\mu S$
$t_r$	Output rise time (10% to 90%)	$R1=1Kohm, C_o=50pF$	--	--	0.5	$\mu S$
$t_f$	Output fall time (90% to 10%)	$R1=1Kohm, C_o=50pF$	--	--	0.2	$\mu S$
<b>ON-BOARD PROTETION</b>						
OCP	Over current protection	Output on VPULL-UP<30V	30	45	60	mA
$V_{Z(SLY)}$	Supply Zener Clamp Voltage	$I_{DD}=I_{DD}(\text{max})+3mA$	33	--	--	V
$V_{Z(OUT)}$	Output Zener Clamp Voltage	Output Hi-Z, $I_{OUT}=1.5mA$	33	--	--	V

(1) Maximum voltage must be adjusted for power dissipation and junction temperature, see Thermal Characteristics

## Magnetic Characteristics

over operating free-air temperature range (unless otherwise noted)

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
f <sub>BW</sub>	Bandwidth		--	20	--	kHz
<b>SC2498TSO</b>						
B <sub>OP</sub>	Operated point	TA=-40°C to 160°C	1.0	3.0	7.0	mT
B <sub>RP</sub>	Release point		-7.0	-3.0	-1.0	mT
B <sub>HYS</sub>	Hysteresis		2.0	6.0	14.0	mT
<b>SC2498USO</b>						
B <sub>OP</sub>	Operated point	TA=-40°C to 160°C	5	7.5	13.5	mT
B <sub>RP</sub>	Release point		-13.5	-7.5	-5.0	mT
B <sub>HYS</sub>	Hysteresis		10.0	15.0	27.0	mT

1mT=10GS

Magnetic flux density, *B*, is indicated as a negative value for North-polarity magnetic fields, and as a positive value for South-polarity magnetic fields.

## TYPICAL CHARACTERISTIC

**$I_{DD}$  VS  $V_{DD}$**

**$I_{DD}$  VS  $T_A$**

**$V_{Q(\text{sat})}$  VS  $V_{DD}$**

**$V_{Q(\text{sat})}$  VS  $T_A$**

## TYPICAL CHARACTERISTIC (Continued)

**B<sub>HYS</sub> vs T<sub>A</sub>**

**V<sub>sup</sub> vs T<sub>A</sub>**

## FUNCTION DESCRIPTION

The SC2498T are integrated TMR-effect sensor ICs with an open-drain output. The open-drain output is an NMOS transistor that actuates in response to a magnetic field. The direction of the applied magnetic field is parallel with the branded face for the SC2498T; The devices are offered in the SO package, a 3-pin surface-mount configuration.

### Field Direction Definition

A positive magnetic field is defined as a South pole near the Left side of the package.

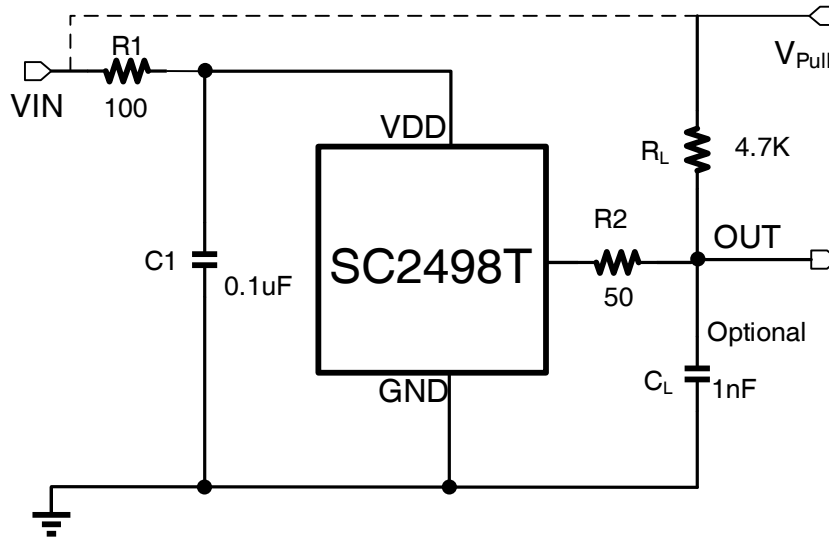

### Transfer Function

Powering-on the device in the hysteresis region, less than  $B_{OP}$  and higher than  $B_{RP}$ , allows an indeterminate output state. The correct state is attained after the first excursion beyond  $B_{OP}$  or  $B_{RP}$ . If the field strength is greater than  $B_{OP}$ , then the output is pulled low. If the field strength is less than  $B_{RP}$ , the output is released.

## TYPICAL APPLICATION

The SC2498T contains an on-chip voltage regulator and can operate over a wide supply voltage range. In applications that operate the device from an unregulated power supply, transient protection must be added externally. For applications using a regulated line, EMI/RFI protection may still be required. It is recommended that C1 capacitor be connected to the ground in parallel near the VDD power end of the chip, with a typical value of 0.1  $\mu$ F. At the same time in the external optional series resistor R1, R2 and output capacitance CL used for enhanced protection circuit, its typical values for 100  $\Omega$ , 50  $\Omega$  and 1nF.

The SC2498T device output stage uses an open-drain NMOS, and it is rated to sink up to 30mA of current. For proper operation, calculate the value of the pull-up resistor RL is required. The size of RL is a tradeoff between OUT rise time and the load capacity when OUT is pulled low. A lower current is generally better, however faster transitions and bandwidth require a smaller resistor for faster switching.

Select a value for CL based on the system bandwidth specifications as:

$$C_L = \frac{1}{2\pi \times R \times f \text{ (Hz)}}$$

V<sub>PULL</sub> is not restricted to VDD, and could be connected to other voltage reference. The allowable voltage range of this terminal is specified in the Absolute Maximum Ratings.

## SOLDERING PROCESS

### Reflow Soldering

Lead-process

Lead-free process

### Manual Soldering Iron Process

Soldering iron temperature: touched pin area max 300 °C Soldering time; max 10 Seconds.

\* It's not recommended to use soldering iron for welding. Continuous high temperatures can cause permanent damage to the sensitive head of this chip (higher than 300°C)

## PACKAGE INFORMATION “SO”

**3-Terminal  
SO Package**

**Dimension:mm**

**Notes:**

1. Exact body and lead configuration at vendor's option within limits shown.
2. Height does not include mold gate flash.
3. Red mark is Hall element.

Where no tolerance is specified, dimension is nominal.

## REVISION HISTORY

Revision	Date	Description
Rev E0.1	2023-06-10	Preliminary datasheet
Rev E0.2	2023-07-17	Unified format
Rev E0.3	2023-08-21	Revised some description
Rev A1.0	2023-08-24	Upgrade Version
Rev A1.1	2024-06-11	Update Sensor Position
