## Description

The CT7035 is an analog output temperature sensor with  $\pm 0.35^\circ\text{C}$  accuracy (CT7035K). It is easily to use to replace NTC by connection to A-to-D port of MCU.

The CT7035 serial parts have multi slope gain, which can replace industry stand parts directly, like LM20, LM35.

Each chip is calibrated in factory before shipment to customers. There is no need for re-calibration anymore for  $\pm 0.35^\circ\text{C}$  (CT7035K) accuracy.

It includes a band-gap circuit, thermal diode, class AB output, a calibration unit.

It integrates a class AB output structure, which can offer up to  $\pm 500\mu\text{A}$  output capability to drive 1000pF load.

Available Package: SOT-23 and SC70-5

1. The Min. supply voltage is always 250mV higher than that of output voltage at least, see below table for each part.
2. Temperature error is defined the temperature difference between temperature-to-voltage transfer function based on Table 1 and absolute temperature. K version means CT7035K, which is better temperature accuracy performance than other slope gain version.
3. For CT7035J, slope gain is 10.0mV/°C, Vout at  $T_a = -25^\circ C$ , is 250mV.

## 1 Function Descriptions

The chip is an analog output temperature sensor with optimized thermal diode as temperature-sensing device. Also the chip has a class-AB output stage with buffer which can offer 500uA source/sink capability. Also CT7035 serial chips can offer several kinds of slope gain distinguished by suffix A to H, J and K.

### 1.3 Output Driver and Capacitive Load

If the chip is used in noisy environment, or connected to a switched sampling input of post ADC, it is necessary to add a filter capacitor shown as below, to minimize noise coupling. The output can drive maximum capacitive load is 1000pF. If capacitive loads greater than 1000pF, a series resistor is required on the output, to maintain stable conditions.

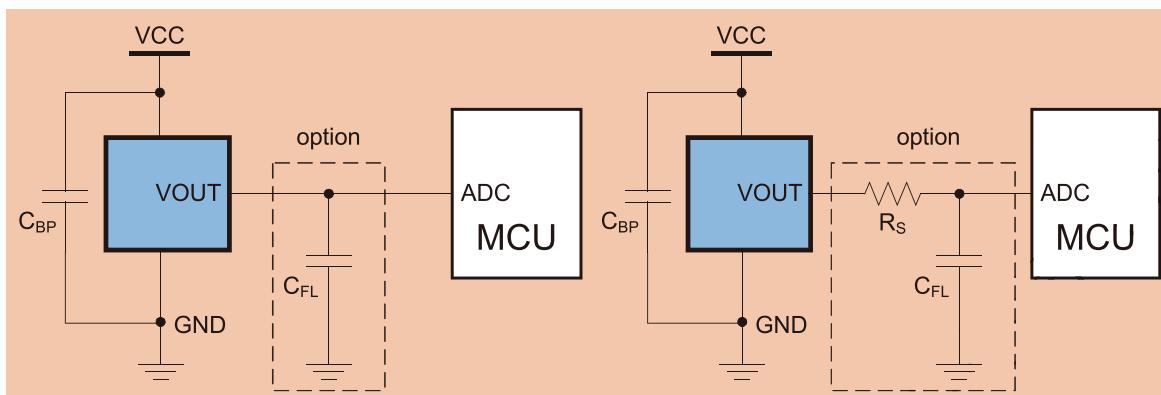

Figure 7. Capacitive Load with/without  $R_s$

#### 1.4 Bypass Capacitor

Bypass Capacitor is necessary to filter noise and placed as close as the chip in most application. And the capacitance value could be 100pF to 1.0nF depending on noise frequency.

#### 1.5 PCB Layout

It is recommended PCB layout shown as below.
