

SGM6014

1.4MHz, 2A Synchronous Buck Converter

GENERAL DESCRIPTION

The SGM6014 is a high-efficient monolithic synchronous buck regulator with a wide input voltage range of 2.5V to 5.5V. The device is available in a 3.3V fixed output and an adjustable voltage versions. This device is targeted at the portable equipment with high current requirements from single-cell Li-Ion batteries. It can enter pulse frequency modulation (PFM) (low I_Q) mode with typically 55 μ A quiescent current for highest light load efficiency to maximize battery life.

The SGM6014 could operate at 100% duty cycle to achieve the lowest dropout and longer battery life. This device is capable to provide up to 2A output load current and operates at a 1.4MHz constant frequency to achieve the smallest size of external components. The internal slope compensation allows the use of smaller-value inductors to give improved solution size to this device.

SGM6014 is available in both adjustable and 3.3V fixed output voltage versions; in the Green TDFN-3x3-10L package. It is rated over the -40°C to +85°C temperature range.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

PIN CONFIGURATION

PIN DESCRIPTION

PIN	NAME	FUNCTION
1	EN	Enable Pin. The IC goes into shutdown mode when this pin is connected to ground. When connect this pin to IN, the device is enabled. Do not leave it floating and must be terminated.
2	IN	Supply Voltage Input. Strongly recommend to use a 22µF ceramic capacitor or greater to decouple this pin closely to GND.
3	AIN	Analog Supply Input. Provides bias for internal circuitry.
4, 6	GND	Analog Ground.
5	FB	Feedback Pin. This pin receives the feedback voltage from an external resistive divider across the output. The internal voltage divider is disabled for adjustable version. (SGM6014-ADJ)
	OUT	Output Voltage Pin. An internal resistive divider divides the output voltage down for comparison to the internal reference voltage. (SGM6014-3.3)
7, 8	SW	Switching Node Pin. Put an output inductor to this pin.
9, 10	PGND	Power Ground.
Exposed Pad	GND	Analog Ground Exposed Pad. Must be connected to GND plane.
