

SGM8429C-4

Quad Rail-to-Rail Output Operational Amplifier

GENERAL DESCRIPTION

The SGM8429C-4 is a quad, high-gain frequency-compensated operational amplifier, which can operate from 3V to 32V single supply or from $\pm 1.5V$ to $\pm 16V$ dual supplies while consuming only 860 μA quiescent current.

The SGM8429C-4 features low power, low offset voltage and low bias current. It is well suited for a wide range of applications.

The SGM8429C-4 is available in a Green TQFN-3 \times 3-16L package. It is specified over the $-40^{\circ}C$ to $+125^{\circ}C$ temperature range.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

NOTE:

- Differential voltage is between +IN and -IN.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.
