

### GENERAL DESCRIPTION

The SGM6623 is a general-purpose miniature boost DC/DC switching regulator with high-efficiency for battery-backup and standby power systems. The acceptable input voltage range of 0.8V to 12V can be converted to a regulated 3.3V to 13V output voltage with efficiency as high as 90%. SGM6623 can be used as backup charger for systems with 1- to 4-cell batteries. It operates at a 600kHz nominal switching frequency, allowing the use of small and low-profile inductor for compact design. It also has several built-in protection features, such as cycle-by-cycle over-current limit, soft-start, thermal shutdown and open loop over-voltage protection.

The SGM6623 is available in a Green SOT-23-6 package.

### FEATURES

- 0.8V to 12V Input Voltage Range
- 3.3V to 13V Wide Output Voltage Range
- 4.4A Current Limited Integrated Switch
- Up to 90% Efficiency
- 600kHz Nominal Fixed Switching Frequency with Pulse Skipping at Light Loads
- Built-In Soft-Start Function
- Open Loop Over-Voltage Protection
- Enable Input Pin
- 47µA Typical Quiescent Current (to VS Pin)
- 0.4µA Typical Supply Current in Shutdown
- Available in a Green SOT-23-6 Package

### APPLICATIONS

- Mobile Phones
- Portable Equipment
- Hand-Held Instruments
- 1-, 2-, 3- or 4-Cell Battery Systems

**RECOMMENDED OPERATING CONDITIONS**

Operating Ambient Temperature Range..... -40°C to +85°C  
 Operating Junction Temperature Range..... -40°C to +125°C

**OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## PIN CONFIGURATION

## PIN DESCRIPTION

PIN	NAME	I/O	FUNCTION
1	SW	I	Switching Node of the Device. Connect to the input source through the boost inductor.
2	GND	G	Ground.
3	FB	I	Feedback input to the error amplifier for regulated output.
4	EN	I	Enable Pin of the Boost Regulator. Logic low disables the chip and logic high enables it. It needs to be pulled up to enable the device, otherwise the weak internal pull-down will disable it. Two levels logic or analog bias with edge slope rate > 10V/ms is desired for stable on/off transition.
5	VS	I	Supply Power Input for Internal Circuit. Connect to the output of converter.
6	NC	—	Not connected. Recommend to solder it onto ground plane for better thermal dissipation.

NOTE: I = Input, O = Output, G = Ground.
