## Quad, Wide-Bandwidth SPDT Video Analog Switch

### GENERAL DESCRIPTION

The SGM330A is a quad, bidirectional, single-pole/double-throw (SPDT), TTL/CMOS compatible video analog switch. It operates from a 2.7V to 5.5V single power supply. The SGM330A features low crosstalk, low on-resistance and fast switching times.

The SGM330A also has the advantages of high current and wide bandwidth (500MHz). The high performances make it very suitable for high frequency applications, such as video editors, audio and video signal routing, etc. In addition, low cost is also one of the important reasons that make the SGM330A a good choice.

The SGM330A is available in Green SOIC-16, TSSOP-16 and SSOP-16 packages. It operates over an ambient temperature range of -40°C to +85°C.

**OVERSTRESS CAUTION**

Stresses beyond those listed may cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational section of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

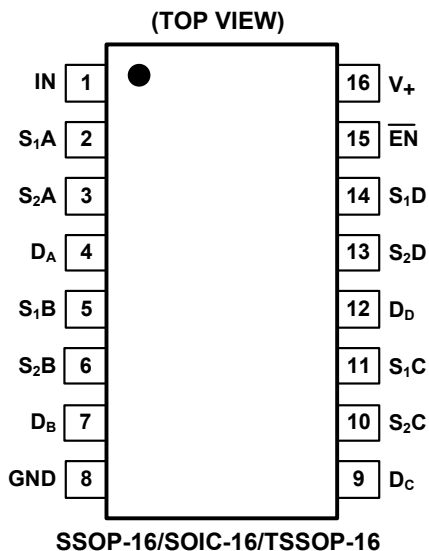

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

**DISCLAIMER**
